These world renowned SEWING MACHINES were awarded the highest Premium at the World's Fair in London, and six first premiums at the New York State Fair of 1866, and are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine...

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, Elias Howe, Jr., the ORIGINAL INVENTOR OF THE SEWING MACHINE.

The Stitches invented by Mr. Howe, and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him. SEND FOR A CIRCULAR.

GROVER & BAKER'S SEWING MACHINES

HIGHEST PREMIUMS. At the State Fairs of New York, Illinois, Virginia, New Jersey, Michigan, N. Carolina, Vermont, Wisconsin, Tennessee, Pennsylvania, Iowa, Alabama, Ohio, Kentucky, Oregon, Indiana, Missouri, California.

At the Fairs of the American Institute, Franklin Institute, Maryland Institute, Massachusetts Mechanics' Association, Pease Mechanics' Institute, St. Louis Agricultural and Mechanics' Association.

And at numerous Institute and County Fairs, including all the Fairs at which they were exhibited the past three years. First prizes have also been awarded these machines at the exhibitions of London, Paris, Dublin, Litz, Besancon, Bayonne, St. Dizier, Chalons, and they have been furnished by special command to the

Empress of France, Empress of Austria, Empress of Russia, Empress of Brazil, Queen of Spain, and Queen of Bavaria.

The Grover & Baker Elastic Stitch Sewing Machines are superior to all others for the following reasons: 1. They are new direct drive machines, and require no re-winding of thread. 2. They are more easily understood and used, and less liable to derangement than any other machines. 3. They are capable of executing perfectly, without change of adjustment, a much greater variety of work than other machines. 4. The stitch made by these machines is much more firm, elastic and durable, especially upon articles which require to be washed and ironed, than any other stitch. 5. This elastic, owing to the manner in which the under-threads are brought in, is much the most plump and beautiful in use, and retains the plumpness and beauty even upon articles which are frequently washed and ironed until they are worn out. 6. The structure of the seam is such that, though it will neither open, run, unravel, but remains firm and durable. 7. Unlike other machines, these fasten both ends of the seam by their own operation. 8. With these machines, while silk is used upon the right or face side of the seam, cotton may be used upon the other side without lessening the strength or durability of the seam. This can be done on no other machine, and is a great saving upon all articles stitched or sewed. 9. These machines, in addition to their superior merits as instruments for sewing, by a change of adjustment, easily learned and practiced, execute all the work of a tailor and permanent embroidery and ornamental work. GROVER & BAKER S. M. CO., 485 Broadway, New York, 733 Chestnut street, Phila., Oct. 23 - 10c.
