This greatest curse to farmers is now in bloom and rapidly ripening. Let farmers everywhere cut all upon their own lands and roads adjoining, and see to it that any neighbors neglecting it are notified according to law. Let penalties be enforced for neglect.

We hear talk of euforcing the fine for

allowing it to ripen. Payne Pettibone, of Wyoming, says: "It can be exterminated by cutting below the surface. Cut off the crown of the roots a few times and it will disappear. If the seed has hitherto ripened and a fresh crop comes up repeat the cutting."

American says:

"If cream is dashed against a hard substance, or mashed between bars or rollers, it breaks the globules and becomes oily, by destroying the grain. It should be thrown into currents and counter' currents by the action of air, causing a friction by the action of the currents against each other, removing the covering without breaking or bursting the globules."

This is the principle which the inventor of this Dash endeavored to keep in view, and the result shows a much larger yield of Butter obtained in less time than by any other Dasher.

Experiments have proven that any other method except pumping air through the cream, will not penetrate sufficiently to exygenize all the globules preparatory to concentrating the Butter. Throwing it into the air by clappers or old fashioned Dashers, does not sufficiently expose it to the air to bring out the Butter. TATA fine variety of Gents and Boys HATS & CAPS, CHEAP.
