American Life Insurance Co., Philadelphia, Capital, 1. This Dasher is superior to any other, by being as simple as the old Dasher, and combining the atmospheric principles therewith, and the Butter Gatherer 2. It is superior to all others, inasmuch as the same power applied to this in like mechanical operations power applied to this in like mechanical operations will make one fourth more reciprocations.

3. It is superior to all others, masmuch as it produces the Butter in a much shorter time.

4. It is superior to any other, inasmuch as it produces a much better quality of Butter.

5. It is superior to any other Patent Churn, inasmuch as it is superior to any other Patent Churn, inasmuch as it is 500 per cent. cheaper than any other.

It is well known to Dairymen and others, that Butter is contained in minute globules or sacks, covered with a membrane, and requires the action of air to prepare the covering to be removed by friction. The Scientific phia, Capital, Cravelers' Insurance Co. Hartford, Conn., Insuring against all kinds of accidents Capital, American says:

"If cream is dashed against a hard substance, or mashed between burs or rollers, it breaks the globules and becomes oily, by destroying the grain. It should be thrown into currents and countert currents by the action of air, causing a friction by the action of the currents against each other, removing the covering without breaking or bursting the globules."

This is the principle which the inventor of this Dash endeavored to keep in view, and the result shows a much larger yield of Butter obtained in less time than by any other Dasher.

Experiments have proven that any other method except pumping air through the cream, will not penetrate sufficiently to oxygenize all the globules preparatory to concentrating the Butter. Throwing it into the air by clappers or old fashiound Dashers, does not sufficiently expose it to the air to bring out the Butter.

And they have been furnished by special command to the

Empress of France, Empress of Austria, Empress of Russia, Empress of Brazil, Queen of Spain, and Queen of Bavaria.

The Grover & Baker Elastic Stitch Sewing Machines are superior to all others for the following reasons: They new direct from the spools, and require nore-winding of thread.

2. They are more easily understood and used, and less liable to derangement than any other machines. 3. They are capable of executing perfectly, without change of adjustment, a much greater variety of work than other machines.

4. The stitch made by these machines is much more firm, elastic and decable, especially upon articles which require to be washed and froned, than any other stitch. 5. This stitch, owing to the manner in which the ar-der threadle in wrought, is much the most plump and beautiful in use, and retains this plumpness and beataw even upon articles frequently washed and ironed uno.

6. The structure of the scam is such that, though it be cut or broken at intervals of only a few stitches, it will not the ropen, run, or rayel, but remains firm and durable.

durable.

7. Unlike other machines, these fasten both ends of the seam by their own operation.

8. With these machines, while silk is used upon the right or face side of the seam, cotton may be used upon the other side without lessening the strength or durability of the seam. This can be done on no other ratchine, and is a great saving upon all articles stitched or made up with silk.

9. These machines, in addition to their superior merits as instruments for sewing, by a change of adjustment, easily learned and practiced, execute the most heautiful and permanent embroidery and ornamental GROVER & BAKER S. M. CO.,
