Locusts. These devouring insects are unusually numer ous this year. So far they don't seem to have done any damage to the plants or trees, but what may result from such an influx of them it Binghamton, they discovered the body floating is difficult to presage. Locusts are mentioned both in sacred and profane history. The prophet Joel, in the Holy Scriptures, speaks of the of fire that destroyeth the stubble:" and one of Colonels .

the afflictions of Pharaoh was a plague of locusts. In the east the ravages of the locust is terrible, owing to the vast numbers in which they appear, filling the air like flakes of snow and darkening the sky so that objects cast no shadow. They eat up every green thing, and after the grass and leaves they devour in their hunger the bark of trees and shrubs. Ripe grain, however, may escape, as being too hard and dry. One peculiarity of these insects, they do not appear annually; it is only after the lapse of a number of years that they are again so numerous and destructive. In the past, in the history of some countries, the years of their extraordinary abundance have been marked as

years of positionee and famine.

Locusts are exten in many countries, rousted in excess of his pay proper.
