

irable

It is hopeless to attempt to fatten chick-ens while they are at liverty. They must be put in a proper coop; and this, like most other poultry appurtenances, need not be expensive. To fatten twelve fouls, a coop may be three feet long, eighteen inches high, and eighteen inches deep, made entirely of burs. No part solid neither top, sides, nor bottom. Discre-tion must be used, according to the size of the chickgns put up. They do not want room; indeed, the closer they are the better—provided they can all stand up at the same time. Care must be taken to put up such as have been accustomed to be together, or they will fight. If one is quarrelsome, it is better to remove it at once, as, like other bad examples, it soon F It is hopeless to attempt to fatten chick-

or four times a day—the first time as soon after daybreak as may be possible or con-venient, and then at intervals of four hours. Each meal should be as much and no more than they can cat up clean. When they have done feeding, the board should be wiped, and some gravel may be spread. It causes them to feed and

will have good fut fowls. If, however, there are but five or six to be fatted they must not have as much as though there were twelve. Nothing is easier than to

they are or may be all fatted af once; but

This enables them to be kept for some time after being killed, even in hot weather.---Boston Journal of Chemis-

try.

How TO UNITE THE ENDS OF LEAD PIPE.—Whatever the size of the pipe may be, procure a block of hard wood, say four or five inches long, and four inches in diameter; bore a hole straight through In diameter; so rear lote straight through the centre, so nearly the size of the pipe that the block can be driven on the end of the pipe with a light hammer. If one has a set of anger bits, it will not be dif-ficult to select a bit of the proper size to make a water-tight fit. Let the block be driven on the pipe for that the end make a water-tight fit. Let the block be driven clear on the pipe, so that the end of the pipe will be finsh or even with the end of the block. Now place the two ends of the pipe together, and drive the block off one pipe on the other, until the joint will be in the middle of the block. If the hole in the block is made of the proper size, the block Avill fit so closely that the joint will be water-tight ;and, if the ends of the pipe are dressed off true and square, the joint will be so strong that it will sustain the pressure of a head or column of water one hundred feet high. Iron pipe may be united in the same man-Iron pipe may be united in the same man-ner. Should the joint leak a trifle, let shingle nails be driven into the wood
