Many persons have often noticed the extreme difficulty encountered in lighting the fire in a stove, especially on a still, damp morning. The "ove at first won't draw; even vigorous blows" will not suffice; and then, when it does start, it is with a sort of explosion or outgush of air which fills the room with sinoke and ras, offtimes puffing the unpleasant fumes in the the face of the operator. The trouble is caused by the difficulty encountered in overcoming the pertia of the long column of air in the pipe or channey by the small column of air that can m forced up through the interstices of the wood kindled: All this may be remedied by simply putting a few shavings or bits of dry paper on air has perfectly free access to it from all sides, the heated hir forces its way up the chimney

Cost of the Militia.

The division staff and the staff and field officers of the Ninth Regiment Pa. N. G., and companies E. N. and K. of the Ninth Regimen and the officers and men of the Wyoming Artilleries were paid at Scranton last Wednesday by Colonel W. B. Hart, cashier of the State Treasury and Mr. W. B. Keely of the execu tive department, for their services at Busquehanna depot during the riot. The amount each man received was seven dollars and the officers a proprotionate sum according to their rank The amount necessary to pay all was abou \$20,000.

Horses that are kept in the stable during the summer should be given daily the luxury of a roll on the earth. Rolling is the means given by nature for the animal to rid itself of vermin and skin diseases, and it tends to make the animal healthy. Some object to allowing a horse to roll on the bare earth, because it gets dirt in the bair and makes extra work to keep the animal clean, but the extra work pays if rightly understood. Allow your horse to roll in the dirt when he is not moist with perspiration, and then stand an hour or two with his coat full of dust before being cleaned out.

A Wonderful Invention. At the Broadway, N. Y., offlice of the West ern Union Telegraph Company, a test was re cently made of an invention which promises to be of almost more importance to the present age than were Morse's first achievements to the people of his own time. The test resulted successfully, and it proved that four messages can be simultaneously sent on a single wire i opposite directions, with no more liability to mistake than as if an equal number of wires were used. The invention quadruples the use fulness of all existing lines and the effect will he the same as if there had been erected three times the present length of line. The only particular in which the change will not be felt will be in the cost of messages, as the Western Union controls the invention and will have monopoly of the advantages.

A Thief in Silver Lake.

On Thursday of last week, a desperado broke into the house of I. B. Gage, while the family were from home, and stole a suit of clothes be longing to the owner of the house and other articles besides beloing himself to what eathbles he needed. On the same evening when the amily came home and found their house ran sacked they made inquiries and found that suspicious character had gone towards Mont ose with a large bundle. Chase was made by everal parties and he was overhauled at the ouse of Mrs. Lannan. He was brought back and arraigned before E. H. Gage esq., and on Friday morning Court Dailey gave him a freride to Montrose and locked him up in the cooler to await further proceedings.

Skeleton Leaves. Leaves to be skeletonized should be gathered only in dry weather, should also be priectly matured, July and August being the best months to gather them. Among the choicest varieties are vine, poplar, beech and ivy leaves. Dissolve four ounces of washing soda in one quart of boiling water: add two ounces of quick lime and boil fifteen minutes; allow this to cool; then pour off the clear liquor into a clean saucepan and when at a boiling point place the leaves carefully and boil one hour; boiling water should be added occasionally to supply that lost by evaporation. If after boiling one hour the cellular tissue does not rub off between the thumb and finger, boil them till ft will, always place the leaves in cold water to se purate the fleshy matter from the skeleton. Bleech the skeletons by putting them into a solution of one quart of water, a large table spoonful of chloride of lime and a tew drops of vinegar : let them remain twenty minutes then remove and dry between sheets of white blotting paper, beneath a gentle pressure.

Leaf Photographs. A pretty amusement, especially for those who contemplate the study of botany, is the taking of leaf photographs. One very simple process is, at any druggist's, get five cents worth of bichromate of potash. Put this into a two ounce and coul, at the bottom of which the fire is bottle of soda water. When the solution has become saturated-that is, the water has dissolved so much as it will-pour off some of the top of the wood or coal, and first lighting that. clear liquid into a shallow dish; on this float a immediately burns into a blaze, because the piece of ordinary writing paper till it is thor-r has perfectly free access to it from all sides, oughly and evenly moistened. Sometimes the venation of the leaves will be quite distinct. By ollowing these directions it is scarcely possible to fail, and a little practice will make perfect. The photographs, if well taken, are very pret ty as well as interesting.

A Very Excellent Suggestion. A neighboring paper suggested a short time ago that County Agricultural Societies offer remiums for the best public highways. This uggestion is a good one. It there is one thing more than another in which the people are negligent if not decidedly shiftless, it is in keeping he roads in good condition. Considering how little time and labor would be required to keep excellent roads most of the time through the length and breadth of the country, it is astoning that such poor roads exist. It is true that during dry periods the roads are good, or passably good, in spite of the negligence of the people. But they might with a very small degree of enterprise be comparatively good at all

It is painful to ride in the country and see ow little is done to keep the water out of the highways or even to pick out the loose stones. The farmers are certainly deeply interested in having good roads. It would diminish the cost of carrying their crops to market and enhance the price of their land; for nothing helps nore to give the persons who travel over the highways a good impression of the country so much as smooth roads well taken care of. Cannot our Agricultural Society take this subject n band?

Camp Meeting. The Wyoming Camp Meeting which adjourned yesterday, after a ten days session, has been one of the most successful and enjoyable ever held in this section. While the attendance has not, perhaps, been as large from the outside and religious people have been there in large retreat. On Sunday the meetings were largely the venerable Dr. Peck, who has served the dence, and was one of the finest, pointed, practical, fervent and powerful. In the afternoon Rev. W. H. Olin of Wilkes Barre, preached an able sermon from the text "That was the true light which lighteth every man that cometh delivered by Rev. I. Austin, from the text "Wickedness overcometh the sinner." -Scranton Journal.

In regard to pastoral visits and to silly men who feel good over their minister and hi

"All judicious pastors discourage tamilarity on the part of their people, especially of the female denomination. For this way lies the danger. A silly woman, plous perhaps, but very soft and shallow, hears the stirring words of her eloquent pastor, is roused, warmed, soothed, exalted—she thinks adjad—and straightway she believes him to be the man sent to do her good. She goes to his study to tell to do her good. She goes to his study to tell him so \$\psi\$ how much enjoyment she finds in his word; or she writes him a letter, and pours ou her little soul full of twaddle about her gratitude for what her developed. tude for what her dear pastor has done for how she is lifted up by his instructions; how she loves him as a friend given to be her guide and comfort, and so on, more and worse, run ning into a mawkish sentimentality, a sicken-ing manworship, disgusting to every sensible person, but very nectar to a vain, worldly preacher, who seeks only to make his hearers "feel good."

There is a world of truth in the above little autshell, and the strongest features of it all is that it comes from one of the oldest and staunchest religious papers in the United States whose word has long been law in religious matters.

Soldiers' Encampment.

We had the pleasure of attending the Soldiers Encampment at Heart Lake on Friday last .-There was a large number of people there---w should estimate that between 8,006 and 4,000 people visited the grounds during the day. We were glad to meet many of our old friends some who were "boys in blue" as well as others. The day passed off very pleasantly and orderly as far as the soldiers were concerned. There were between 300 and 400 soldiers in camp, and all conducted themselves in an orderly and gentlemanly manner. The display, of course, was not what it will be, when the Encampment is armed and equipped, and we understand arrange ments are being made to perfect this before an other reunion. Sailing on the Lake in Taylor's Steamer formed quite a prominent feature the day. We found our friend J. O. Bullard and hem. They demonstrated the fact that they know how to entertain people in the woods as well as at their Hotel in Brooklyn. About 200 of the soldiers formed in ranks after dinner, headed by the Brooklyn Band and went through with a partial drill as well as they could with sticks for guns, under the command of Col. Telford of Susquehanna Depot, commanding officer of the 3-x, D. W. Searle esq., offered some resolutions accompanie timed remarks that enlisted the hearty approved of all present. Capt. Jerome R.
