THERE'S ROOM ENOUGH FOR ALL.

St. A. Part March 1

What need of all this fuss and strife, Each warring with his brother ? Why should way in the crowd of life, Keep trampling down each other ! Is there no goal that can be won, Without a squeeze to gain it? No other way of getting on, But scrambling to obtain it? Oh, fellow.msn, here wisdom, then, In friendly warning call— "Your claims divide, the world is wi There's room enough for all."

What if the swarby peasant find No field for honest labor: He need notidly stop behind, To thrust aside lis neighbor. There is a land wilk sunny skies, Where every brawny hand that tries Its strength can grasp a living. Oh; fellow men, remember theo. Whatever chance befall, The world is wide-where those abid. The world is wide-where those abide There's room enough for all.

From poisoned air ye breathe in courts, And typhus inined alleys, Go forth and dwell where health resorts, In fertile hills and valleys; Where every arm that clears a bough Finds plenty in attendance. Up, leave your loathsome cities, now, 'And toil for independence, Oth hasten; then, from fevered den, And lodging cramped and small; The world's wide-in land beside, There's room enough for all.

In this fair region far away, Will iabor ind etaployment-A fair day's work, a fair day's pay, And toil will earn enjoyment. What need, then, of this daily strife, Where each wars with his brother f. Why need we, through the crowd of life, Ecep trampling down each other From rags and crime, that distant clime Will free the pauper's thrall; Take fortune' tide-the world so wide Has room enough for all.

NATIONAL ORIERVATORY, Washington, Jan. 5, 1848, SIR: I have the honor of making known to you a most important discovery for astronomy, which has been made by Di. Locke, of Ohio, and of asking authority from you to avail myself of it for the use and propositiou of this Observatory. The discovery consists in the invention of a "mag-netic clock," by means of which, seconds of time may be divided into hundredths with as much accu-racy and precision as the machinist, with rule, and present system of Government, and still exists, by prce of the compact which was then entered into between the various sections of the Union. Maryland and Virginia, two Slave States, ceded to the the name of the "District of Columbia.". In this

listrict, the inhabitants retained all their original racy and precision as the machinist, with rule, and compass, can subdivide an inch of space. Now, the question arises, has Congress the power

compass, can subdivide an inch of space. Nor do its powers end here. They are such that the astronomer in New Orleans, St. Louis, Boston, and of every other place which the magnetic tele-graph reaches, may make his observation, and at the same moment cause this clock, here in Washington, to record the instant with wonderful precision. Thus, the astronomer in Boston observes the tran-eit of a stor as if dits through the field of his instrumore. A strict construction of the Constitution, is always the safest for the country; and thus viewing that instrument, we are honestly of the opinion, that it confers no such powers upon Congress.
