Tin Roofing. The subscribers take this method to inform property holders, house-builders, and all others interested, that they still continue the basiness of Tin Roofing, in all its branches. Their skill and experience in this part of the business, has hitherto enabled them to give entire satisfaction: And they hope, that by continuing the same policy of using the best materials, and employing skillful workmen, to keep up this favorable impression. If the question of Tin Roofing was new, or just brough before the notice of this community for the first time, we would consider that the importance of the subject would justify us in extending our views on its superior advantages. This, however, is not the case. We shall therefore, confine ourselves to a few remarks. On the first dot June, 1844, (nearly seven years sago), we fan-ished our first job of Tin Roofing in this place. From that up to the present time, we have covered with thin the roofs of, the finest and most corify buildings that have been erected in this county. We have given our views on a previous occasion on the superior advantage, of Tin over iron, as a covering for houses. Again, if we place Thin i justa position, with Slate as a covering for houses, we think that the will bear a favo-rable comparison, with some decided advantage.— These advantages are, that when tin is used the rool can be made much flatter—thereby saving materials, in the length of railers, brick in the gable ends—making the house easy of access in cuse of a fire, and showing a better finish and appearance. Also, when tin is used the gutters are worked in; thereby saving the extra and theavy expense for copper gutters, copper flashings, de. .—things indispensible on slate rools. Dr. PERSTRA, in his famous treatise on "Food and Di-et," published by Fooviers & Wells, New York, page 35, states the same great fact, and describes the method of preparation. There are few higher authorities than Dr. Person. Dr. COMBE, in his valuable writings on the " Physiolo-gy of Digestion," observes that " a diminution of the due quantity of the Gastric Jaice is a prominent and all-pre-valing cause of Dyspesie," and he states that " a dis-tinguished professor of medicine in London, who was severely afficieted with this complaint, finding everything else to fail, had recourse to the Gastric Jaice, obtained from the stomach of the famous works on " Vegetn-ble Diet," says: "It is a remarkable fact in physiology, that the stomachs of animals, macernted in water, im-part to the fluid the property of diszolving various arti-cles of food, and of effecting a kind of artificial diges-tion of them in no wise different from the natural digest-ivo process." Professor Duvoliton, of the Jefferson College. Phila-delpha, in his great work on Human Physiology, devotes more than fify pages to an examination of this subject.
