MANCHESTER MINERAL PAINT

ALLEGHEST CHY, PA. New York, December 15th, 1851.

I have analysed a sample of MANCHESYER MINERAL PAINT, for Pubers & Post, and find it to contain the following: ERAL WAINT, for Pubbun & Pond, and find I tain the following:
Silica,
Alumina,
Per Oxide of Iron,
Lime,
Marnesia,
Oxide of Manganese,
Water and Loss,

The Powdered Sample, contained in the box, which I suppose was the one you desired also to have analyzed, I find to differ from any average of the lumps powdered, and mixed together. This last yields as follows:

Per Oxide of Iron, 59,50
Silica and Alumina, 33,00
Lime, 20

This difference I presume arises from the mineral not being uniform, some portions containing more Iron than others. The analysis shows the article to be well suited for a durable paint. I find that by calcining the powder by a pretty high heat, the color is much improved, or at least converted into a first red.
