A glance at the map will show that this is New York's direct route to that portion of the Eric railroad. The surveys and ascertained distances show that the distance from New York to Cleveland, by this route, is 91 miles less than by the New York and Erie road; and between New York and Chicago the distance is reduced about 120 miles. There is every prospect that that this line of roads will be built, and completed at an early day. It will be a more powerful competitor of the Central road, than either the New York or Maryland roads. But there will be employment enough for all.

One singular fact appears, as stated in this The New York and Erie road is, in its general

The Gold Fields of the World Gold abounds, to a greater or lessextent, in almost every country. It has been found in small quantities in Spain, Portugal, Sweden, and the Gertities in Spain, Portugal, Sweden, and the Gernanic States, Turkey, and even in England. The produce of the Russian gold mines is from fifteen to twenty million dollars annually. Besides Australia, gold is found in Hindostan, China. Malacca, Japan, Borneo, New Guines, and New Zealand. It has also been discovered in considerable quantities in and about the Chaundie river, in Lower Canada. The eastern gold re-gions in the United States is considered as be-

ginning in Virginia, extending through North Carolina, and thence northwesternly into Ala-bama, terminating in Tennessee. The diggings are supposed to be pretty well worked out, al hough productive at times.
In 1843, \$1,200,000 was dug from the gold mines in Virginia. The west coast of America both north and south of the Equator, is perhaps the region having the greatest deposites. The preciousmetal is found in considerable quantities n all the South American States. Gold is pro cured also from various parts of Africa to the amount probably of \$2,500,000 yearly. It is mated that the total yield of gold during the year 1853 was \$350,000,000; and it is supposed that the whole stock of gold and silver bullion

bend it down and bury it in the hole, confining it down so that it will remain. Do this in the winter or beginning of spring. The end of the limbs thus buried will take root, and put up sprouts of soions, which, when they become sufficiently large to set out, dig up at the proper season, and transplant them in the orchard where you wish them to remain. When they get large enough to bear, they will bear apples as Or THE strictness of the passport system, at the dangers from new comers which haunts the n official mind, a good story has just
