By Hon. Joseph Trumbull. A Delegate in Confrom Connecticut, after having signed his mame to the declaration of independence, said to one of his companions: If we are defeated in our struggle for independence, this day's work will make bad work for me. I have held a commission in the rebel army; I have written for the rebel newspapers;
I am the son-in law of a rebel governor; and now I
have affixed my name to this rebel declaration. My
sins are therefore top great to be pardoned by our royal master, and I must then be hanged.

The other genteman answered: I believe my tion with the army; nor can it be proved that here-tofore I have written, or done any thing, very ob noxious to the mother country. The immediate and prompt reply was: "Then,

nit, you deserve to be hanged."
The Memory of Col. William Williams, a Patriot '76-Who that he might aid in removing the heltar from his country's neck, never hesitated to

Mr. Hamersley, on being called on for a sentiment, remarked that the circumstances connected with the attack of the British upon Stonington, were probably well known to all present—it was well known how gallantly that town was defended; in what dilemma the volunteers were soon placed in equence of their flannel for wadding being exhausted, and how happily they were released by te-male ingenuity. Persons were sent to a neighbor-ing place in search of financi, and on hearing the application made, Mrs Bailey took from her person her under garment, exclaiming, "There is flannel for your guns, and more can be procured from like The result was that the British were discoinfited and repulsed.

Mr. H. said that Mrs. Buley yet lived, and he trusted her future days would be as happy, as her past conduct had been creditable and patriotic. He The Health of Mrs. Bailey—She taught a proud

foe to cread the influence of petticoat government. The following is extracted from an exchange

paper to show the vast importance of the conjoined Coal and Iron trade.

We invite the particular attention of our readers to the advertisement of the estate of Hardman Philips, Esq., contained in this day's paper; considering Coal and Iron as subjects of peculiar interest, not only to this state, but to the union at large, and believing that they are destined to form the basis of great national and individual wealth, we are always desirous to contribute our efforts in the developement of the inexhaustible mineral treasures of the "Keystone State." As analogous to this subject we beg leave to recal the attention of our readus to the following short extract from an interesting ommunication from a highly respectable source, respecting the successful manufacture of iron in Fingland, which appeared in this Gazette of the 4th oft. In speaking of Chillington Iron Works, the writer remarks:—"The country around is generally level, and as far asithe eye would reach. In the direction of Birmingham and Bridgeworth, the whole plain appeared to be studded with iron works, many of which I was informed, are of similar ex tent to those I was inspecting, at which the whole quantity of pig metal produced, namely, 320 tons oer week, is, within stone's throw of the furnaces, nanufactured into bars, rods, botler iron, &c., by the same company. Those gentlemen purchased the mines contained within one hundred acres (on which the works are erected) but not the land itself, of Mr. Gifford, of Chillington, for one hundred thousand pounds sterling, and it is said that they are realizing princely fortunes by their bargain."

Possessing within our own borders, mountains and hills filled with mineral wealth, and valleys teeming with agricultural abundance, we see no reason why our favored country should continue to be tributary to Europe for the supply of an article of such vast importance to the arts of civilized life, and an indispensible in the construction of our mighty works of internal improvement. We confidently trust, therefore, that the period is not far dis tant, when a judicious application of the skill, enterprize and capital of our own people to the develshall have established another claim to national in-

# MISCELLANEOUS EXTRACTS

From Foreign Journals, Memoranda &c. PRESERATION OF CAST IRON PIPES. - The great deupon them, is an object of some importance in all mining establishments. About twenty years ago I was induced to try various experiments to prevent the sudden action of water upon iron pipes, and I am induced to send you a statement of my experi aspect; the eyes, once beaming with affection, were ments. Having had several fathoms of cast iron pipes about to be placed in a deep well, I had them well cleaned from sand, &c.; after which the pipes were made hot, so as to cause tallow to smoke when applied to them: I then had the pipes well rubbed inside and outside with good Russia tallow, the pores of the iron being sufficiently open to admit the tallow, and as the iron cooled by the application of the tallow, a portion of it was closed in the pores of the iron, which prevented the action of the water upon the pipes for several years. The great destruction of iron pipes in copper mines, is occasioned by the ing charged with copper; which water is divested of the copper by the action of the iron, in the same way as we find by placing a piece of iron in some water impregnated with copper, the copper will be precipitated to the bottom, and the iron will be held in solution; but it will be found that if the iron be well saturated with tallow, that water will not act so rapidly upon it. I am, sir, your obedient J. HOLBAKEWELL

-Mining Journal, No. 33. MECHANICAL POWER OF STEAM .- If steam be used to raise a piston against the atmospheric pressure only, although a definite physical force will be exerted by it, and a mechanical effect produced, yet under such circumstances it will exert no directly useful efficiency; but after the piston has been raised, and the tube beneath it filled with steam, balancing the atmospheric over it, a useful effect to the same amount may be obtained by cooling the tube, and thereby reconverting the steam into water. The piston will thus be urged downwards by the unrestated force of the atmosphere, and any chain or rod attached to it will be drawn downwards with a corresponding force. If the area of the piston be, as already supposed, equal to the magnitude of one equare foot, the atmospheric pressure upon it, being fifteen pounds for each square inch, will amount to 144 times filteen pounds, or 2,160 pounds. By drawing down a chain or rope, acting over a pulley, the puston would in its descent ( oinitting the consideration of friction, &c. ) raise a weight of 2,160 pounds

Taon -In a foundry in Germany, it has been lately discovered that by producing an evaporation of the chlorine, in making cast iron of the second or third quality, an iron of the first quality is produced. This new process has been tried in the forges of the Bes Rhin with complete success. The value and importance of this discovery cannot fail to be apprecialed by all iron masters.

Inon.—Cast and wronght iron and steel exported. Declared in value, 1,406,8721; and in 1835, 1,680, 0001.; being an increase of 19 per cent. in one year.

—Annual average (five years), 1820 to 1822, 90, 283 tons; 1825 to 1829, 87,237 tons; 1830 to 1834, 142,071 tons; increase 632 per cent.—Prices of bar tron at the works in Wales—1835, April 1, 7L per ton; September 7, 7L 10s. per ton; October 7, 8L per ton; December 7, 9L per ton. 1836, January 7, 10L per ton; January 18, 11L per ton.

Inon.-Twenty years back Dr. Porcal, when analyzing some fragments of ancient lava near Monat Etna, lound from ore in them, more recently, Dr. Benedetto has discovered close to the volcano an extensive voin of this metal, presenting groups of öctahedral figures.

APRLICATION OF THE HOT-BEAST TO THE PRODUC-Tion or Cast-Igon.—In the Clyde iron works, near the Glasgow, of the first six months of the year 1829, every ten of cast iron required for its production eight tons and one fourth hundred weight of splint oal, reduced to coke, at a loss of fifty five per cent.

During the first six months of the year 1830, after the application of Mr. Neilson's invention, when the air had been heated to about 300° Fahr., every ton of cast iron required five tons three and one fourth hundred weight of splint cost, converted into coke.
Adding eight hundred weight of cost consumed in

The following remarks and toasts were delivered heating the air, the saving effected was two and a balf tons of splint cost, on every ton of cast iron produced; and the same blast was found to be capable of making much more iron, the diminished requisite of air being pretty nearly proportioned to the diminished fuel required. But during the first six months of the year 1833, when the temperature of the blast had been raised to above 600°, and when the process of coaking the coal had been discovered to be superfluous, and was accordingly omitted, a single ton of east iron was produced by only two tons five and one fourth hundred weight of splint coal. Even when we add eight hundred weight of coal to heat the air, the quantity of splint eval required in 1833 to make a ton of cast iron, was nearly one third of what was used in 1833. The blas machinery continued the mme, but the same blast made twice as much iron as in 1829. The same enal produced thrice as much cast iron; the same blast twice as much.

The iron furcaces alluded to are worked twenty three hours out of the twenty four; a half hour every evening, and another every morning, being occupied in letting off the iron produced. During every working hour, the solid materials which feed the furnace at the top amount to two tons almost exactly; while the air forced in at the bottom, in the same time time, amounts to the surprising quantity

Since a smelting furnace must have a very elevated temperature, in order to work it favourably, wher we consider the cooling effect of six tons of air ar nour-two hundred weight a minute-supplied the bottom of the furnace, and entering near the nottest par', t is easy to account for the increased energy of the furnace, when this prodigious refrig eratory is removed, by heating the air before it passes mito the furnace.

We feel, however, bound to add, that Mr. Har too made to the late Scientific Association at Dublin. a communication respecting the use of hot air in iron-blast furnaces in Yorkshire, in which he stated, that this mode of supplying the smelling furnaces possessed but few advantages, and also deteriorated the troh, which had, consequently, tallen much in value; but in the course of a conversation which ensued, several gentlemen stated, that the price had not an falleu in other parts of the country. - Ameri can Journal.

STEAM-ENGINES .- At a meeting of the British Asneigtion, Mr. John Tadlor, the treasurer, stated that the number of steam-engines now at work in training the mines in Cornwall, are equal in power to at least 44,000 horses; and that in the early stages of the employment of steam power, the quantity of coal consumed was sixteen bushels, where now only one bushel is required.

### AN APPARITION.

In the Montrea. Transcrut, the following narrative ppears, and the editor remarks that not withstand ing his often declared scepticism, regarding any visitation of earth by the disembodied spirit, the following relation, coming to us from a source Iruly respectable, and so enlighted by liberal education as to defy all suspicion of her being the slave or nurse ry tales or popular superstitions, we insert it with out further comment

Last Tuesday formight, as Mrs -------, (lady o literary taste and rather studious habits) sat reading n her drawing room, the clock on the mantle piece struck twelve; as the last stroke reverbefated through the apartment, its doors were saddenly flung open. In the act of raising her head to reprove the intrusion (unrung for) of her servant, her eye rested on the form of her late husband; she screamed and fell senseless on the carpet. This brought up such members of the family as had not vet retired to rest -restoratives were administrated, and when Mrs. - had regained posession of her suspended facalties, and being a woman of strong mind and highly cultivated intellect, she felt disposed to consider the whole of the distress she had undergone, as the result of certain associations between the melancholy tale she had been persuing, and her late loss, operating on a partially deranged nervous system. She, however, considered it advisable that her female servant should repose in her chamber, lest any return of what she had determined to consider a ne vious affection should distress herself and alarm the

Last Tuesday night, feeling stronger, and in bet ter spirits than she had enjoyed for several months past Mrs. dispensed with the presence of her attendant, retiring alone to her chamber, and went to bid a little before 10 o'clock. Exactly as the clock struck 12 she was awaked from sleep, and distinctly beheld the apparition she had before seen advancing from the table (on which stood her night ITION OF CAST IRON PIPES.—The great de. lamp) till it stood opposite to, and drew aside the curtains of the bed. A scene of sufficeating oppresdenrived her of all nower to access aloud. She describes her very blood retreating with acy chillness to her heart from every vein. The ccun aspect; the eyes, once beaming with affection, were now fixed in stern regard on the tremoling half dissolved being who with the courage of desparation thus adjured him-"Charles! dear Charles! why are you come again?" "Jessie," slowly and solemnly aspirated the shadowy form, waving in its hand a small roll of written paper, "Jessie pay my newspaper accounts and let me rest in peace!"

A Water Spout, formed in the Hudson river lately passed Canaan, (N. V), and carried away hundred feet of the Hudson and Berkshire rail road, suddenly arreating and imbedding the engine beneath an avalanche of sand. Several other portions of the track are destroyed. Three barns were also carried away.

The Fredericksburg Arena says that Mr. Wm SELDEN, of Virginia, will receive, if he has not al-ready received, the office of Treasurer of the United

Tennessee .- The Nashville Banner of the 8th inst. in remarking upon the progress of the election for Governor and members of Congress, soon to take place in that State, states, that "The Whigh are firm, united and resolved to maintain their supremacy, as they have gloriously done hitherto. We say confidently to our friends abroad—all is well in Tennessee
