Collect scions when convenient, and bury them in sandy soil, five or six inches below the surface, or wrap them in a damp rug or mat, pack in a close box, and set in the cellar. In this way we have kept scions, in perfect condition, from Novem- ber till June. Prepare your accounts for settlement at the closa of the year. SALT AND SOOT.—It is said that an important agricultural discovery has recently been made, showing that, by the union of salt and soot, a most valuable manure is produced. It has been found that land which usually produced twenty five fors of carrots to an acre, when fertilized by a mixture of six bushels and a half of soot, yielded forty. This manure is also said to be very good for grain, and especially so for potatoe land, which hefore had never produced more than one hun- dred. and fifty seven bushels to the acre, yielding two hundred and forty after having been manured by a mixture of thirty hushels of soot and eight of alt. Tools.—Every farmer should provide a suita- ming and other implements. The cost of size a building is slight compared with its importance
