Greatest Discovery of the ASe

DR. TRASK'S

RAGNETIC ONNERT,

18 constantly effecting cures of the utmost importance. The most incredutous are convinced—the most faithless are compelled to believe in the power and virtue of this great remedy.

It is universally admitted to be the most wonderful combination known to the world for the immediate relief of disease and pain.

It never fails while there remains sufficient life to describe the power of the capillary vessels of the body, and equalize the circulation of the blood. By this means a controlling power is gained over the most malignant forms of disease, while reannot be obtained from any other remedy. Such is the power of this combination that it penetrates to every portion of the human frame; every bone and muscle, we win and ligament is searched out and made sensible of its pirifying and healing influence. Hence it comes it copes as readily with internal as external diseases. Numerous instances are on record where this remedy has restored health to patients so near the grave that the most powerful distent remedies failed to produce any effect. Such best frequentlybeen the case in

Swayne's Celebrated Vermifuge. "A safe and effectual temedy for Worms, Dya-pepsia, Cholera Morbus, sickly or Dyager-tic children or adults, and the most useful Family Medicine ever offered to the public."

Berrms to be Let.

Cituated in Catawissa Valley, Union township, Schuylkill County, Pennsylvaniar, betoughing to the catae of the late Stephen Girard—these farms are eight in number: from 50 to 100 acree of land cleared in each; located in a rich red shale valley; fine within reach; contiguous to the Schuylkill, Mahanoy, and searing a constant sad good market for all descriptions of agricultural produce.

To indestrious and capable Farmers, possessed of ome capital, they offer great inducements; to such, the years leases will be given, on liberal terms. For further information, apply, post poid, to J. D. MEREDITH, agent fif Lands, &c., Postevills, Schuylkill County, Pa.

CAUTION TO THE PUBLIC

NO article of acknowledged merit is more extensive.

It is converted to the practised in connection, in order to secure the best result, and especially that the third one must not be attempted without the former two, for we have known sad failures to result from close planting, where the ground was not well manuted or plowed deep.

The amount of manure requisite, will of course the pain!

Being cognizate of the detect attention.

FRED. GROSHOL. Justice of the Peace.

LIFE SATED!

AWFUL CASE OF SCALD:

AWFUL CASE OF SCALD:

Fraggifeld. Magara co. M. Y., Sed. 28, 1868.

Mr. Dalley-Dear Sir: While my son; 15 years old, was ar work in the shingle manufactory of L. P. Rose, he had the misfortune to slip and fall into a large vat, used for the purpose of boiling blocks preparatory to cutting. The bolcks had just been removed from the wit, containing a large quantity of boiling water. He fell forward scalding both hands and arms, all one side, and one leg-badly and the other partially. The scales were so bad on his arms and leg that nost of the flesh came off with his garments, and his life was despaired of by-both his physichns and friends.

Dalley's Pain Extractor was procured as soon as possible (which was in about six hours) and applied which stores. There appeared a general improvement, so much so that in three weeks he was removed to his father's house, distant about one mile and a half, we continued the use of the above medicine about two months and we believe it was the means, under frovidence, of saving his life, and we would cheerfully recommend it in all similar cases as a safe and invaluable remedy. With sentiments of respect I remain, dear sir, your most obedient and humble servant, series and substitution of the case of Mr. Clark, Scannath Clark, Scannath Clark, F. Hidden, P. D. P. Davis, do Orders respectfully solicited by the Proprietor. Office over florace Smith, Eq. 's Centrest. Postwille.

HOW TO RAISE A PREMIUM CROP OF CORN .-A subscriber wishes us to inform him how to A subscriber wishes us to motion and now to produce the largest amount of corn from an acre of good Sciota bottom land.

It is impossible for any person to say what is the maximum amount of corn or any other crop that may be produced on an acre, or what is the best possible mode of culture.

Another difficulty is Another difficulty in the way of complying with our friends request; is, the want of precise information as to the character and condition of the soil—for there is a very great difference in these respects in good Scioto bottom land—some being much worn by long cropping with corn, with no manufact, and others kept in better condition by the use of clover or manufre.

clover or manure. clover or manure.

But presuming that our friend only desires such general information as may enable him with the aid of his own judgment and experience, to improve his mode of culture, and perhaps raise a "brag crop" of corn the coming season, we will give him four short rules, expressee in one line, thus:

Manure liberally, plow deep, plant clott, cultivate well. These rules comprise in substance, the mode of culture of nearly all the wonderful corn crops which have been recorded. But it should be remembered, that

course depend much on the condition of the soil—whether recently manured, or in sod, &c., but we do not remember of having ever seen a crop of corn, that we thought was too highly manured, if the manure was well plowed in; though of course it may not be the wisest economy to manure a few acres very highly at the expense of other portions. Deep plowing, we are convinced, will be found of very great advantage on our bottom lands, thereby bringing up to the surface, say two inches of fresh soil, while the manure and surface soil is buried at a greater depth than usual. Subsoil plowing would also prove highly beneficial on the more compact

and clayey bottoms. Planting must not be overdone, or the crop will consist only of fodder. But if the two former rules have been observed, full onetormer rules have been observed, full one-third more stalks than usual will be support-ed with advantage of ground, and in order to obtain the largest possible yield of com, we should not have imore than two stalks in a place—say the rows 3½ feet apart and the hills 20 inches apart with two stalks in each hill. The after culture must be directed by the udgment of the farmer-remembering that weeds rob the crop—and frequent stirring the the soil (when not too wet) is a decided advantage, until the plants have nearly obtained their growth, but this work should be done in such a manner as not to break the roots of the plants, hence the cultivator is a better mplement than the plow after the plants have pushed their roots into the alleys. Now if any of our old bottom land farmers an give better advice, let them do it-our columns are open.—Ohio Cultivaior.
