The bright black eye, the melting blue-I cannot choose between the two ! Well, both might make a martyr break The chain that bound him to the stake; And both, with but a single ray, Can melt our very hearts away; And both, when balanced, bardly seem To stir the scales or rock the beam ; Yet that is dearest, all the while, That wears for us the sweetest smile:

FRESH FROM HELICON! A poet in the Keene Republican, celebrating th works of Dame Nature, has an idea which comes very near being original, if it be not quite so: With an improved material and art;

Blake's Pitent Fire-Proof Paint

THE subscribers have just received a further sup
ply of this cirgular and valuable substance. In
addition to the state color, they have a beautiful
tecolate or brown, resembling the sand spone now in
the state actual or the front of buildings.
Its principal ingredients are silica, alumbia and protogide of iron, which in the opinion of scientific mensatisfactorily accounts for its fire-proof hauture—the
two former substances being non-conductors, and the
two former substances being non-conductors, and the
latter actual as a cement, to bind the who te orgetter
and make a firm and durable paint.
For use it is miked with Linserd Oil, and applied
with a brush, the same as ordinary past, to wood
from, tin, zine, camass, paper, &c. It is reduced
ally and becomes fire-proof. It is particularly suitabe for roots of bislings, stramboat, aid car-deck
railroad bridges, finaces, &c. A loof or ded with the
struck is equal to due of state, at a vast saving of expense.

Specimens may be seen at the office of the subscribers. HARRISON, BIOTH EIRS & Co.

QUEEN CITY HAMS. Messrs. Yandley & Sox, of this Borough, ; who have these celebrated Hams for sale, have kindly furnished us for publication, the following directions for Preserving, Boiling and Broiling them:

To Preserve the Ham from mould during the Summer, it must be hung in a dry cool place, from the ceiling of rooms, not too near the roof. The rooms must be kept as dark as possible, but not too confined. A free aco cess of dry air should be allowed to pass through if the Hams should appear at all damp.

To Boil a Ham. Select one weighing twelve pounds or under; place it in a boiler containing say five to six gallons of cold water; let the Ham simmer and come to a gradual boil; keep in 31 to four hours. If the water should boil down before the Ham is sufficiently 'done, the boiler must be re-50 " do Superior all wool filling, do
