when all hope of relief had been given up, and every thing else been tried in vais! To illustrate the use of the GALVANIO BELIT, suppose the care of a perion afflicted with that bane of civilization, DYSPEYSIA, or any other Chronic br Ner-ous Disorder. In ordinary cases, stimulants are taken, which, by their action on the nerves and muscles of the stomach, afford *i traperary* relief, but which leave the pationt in a lower state, and with injured faculties, after the action thus excited has ceased. Now compare this with the effect feaulting from the application of the GALVANIC BELIT. Takes a Dyspectic sufferer, even in the worse symptom of an attack, and simply lie the Bell around the body, using the Magnotic Fluid as directed. In a short period the intermible perpiration will act on the positive elementief the Bell, thereby causing a Gal-vanic circulation which will pass on to the negative, and hence back again to the positive, thus keeping up a con-vinuous Gelvanic circulation throughout the system. My reply is as follows: For about twenty jears I had been suffering from Dys-pepsia. Every year the symptoms became worse, nor could lobtain permanent relief from any course of medical treatment whatever. About fourteen years since, in con-sequence of frequent expourse to the weather, in the dis-charge of my pastoral duties, I became subject to a servere Chronic Rheumatism, which for year after year, caused me indescribable anguith. Farther: in the winter of 45 and 46, in consequence of preaching a great deal in my own and various other churches in this region, I was attacked by tho Brohchitis, which scon became so servere as to require an immediate supension of my pastoral labors. My nervous system was now thoroughly prostrated, and any Bronchitis became worse, so also did my Dys-pepsia and Rheumatio affection—thus evincing that these desorders were conhected with each other through the medium of the Nervous System. In the whole pharms-copais there ascemed to be no remedial agont which could reach and recuperate my rowous System is every thing that I had tried for this purpose had completely failed. At last I was led by my friends to examine your inven-tiona, and (though with mo very sanguine hopes of their efficiency.)
