PRIZE HAM, HOW CURED. At the recent Agricultural Fair in Montgomery county, a prize was awarded to Nathan White for the best ham. This gentleman's mode of curing is as follows :

The pork should be perfectly, cold before being cut up. The hams should be salted with fine salt, with a portion of red pepper, and about a gill of molasses to each. Let them remain in salt five weeks, then hang them up and smoke with hickory wood for five or six weeks. About the first of April take them down and wet them with cold water, and let them be well rubbed with unleached ashes. Let them remain in bulk for several days, and then hang them in the loft

again for use.

POULTRY MANAGEMENT.

My poultry are of the same sort as may found in any of the neighboring farm vards; the eggs of the largest and best hens have ~ been selected for sitting, so that the stock consists of birds capable of covering 15 eggs ... which is the largest number I ever placed under a hen. The cocks are changed every two years, taking care to supply their place with fine, healthy birds of the previous year. Hens are useless after the third year; my plan is, in a stock of, say 30 hens, to introduce 10 young pullets every year, and part with 10 of the oldest hens. One male bird must be kept to every seven hens; but when more than fifty hens are kept, one to every 6 is necessary. On the proportion of the male-Booksellers and agents engaged in its sale, are birds kept, depends, I ain confident, the nummaking handsome competencies from the ready ber, as well as the successful fecundation of the same of the successful fecundation of the successful fecundation of the successful fecundation of the eggs.
