Cut a scion of the last years growth from DR ROSE'S VEGETABLE VERMIPUGE - This the tree early in the spring, and divide it Due NOSE S VECE AGINE VERMITTURE - This compound having been used by me in a full practice of twenty-six years, with the most beneficial results in cases of worms, has so well established its supe-trority above unst other worms medicines that the de-mand has increased beyond all calculation. All medi-cines should be prepared by a physician and chemist. It is true that many articles are now, soil, are good or chard soil, first putting a little clean sand around them, and a shoot worms, but it should be remembered that many are the powerful for the constitution of young children. Prace 22 cents. thrifty for your standard, and lop down and DR. ROSE'S CRODP OR HIVE SYRIP,—There have been many remedies compounded for the cure of Croup or flives. The disease is particularly preva-lent among children and often fatal; but as bave hever seen a case derminate fatally or continue low in wher- this Syrup was used, I can recommend at with the highest confidence. Price 25 cents. See direc-tions. Cover the others with sand and earth to form produce trees in this way, two years sooner than from seeds, particularly from apples, tions.

tions. DR ROSE'S FAMILY OR SANATIVE PILLS. — pears and quinces. Roses and many other garden shrubs are propagated in the same constant use of families, as they are mild and certain in their operation, causing no pain or uneastness, leaving the bowels perfectly free from costiveness. — Price 25 cents.

PREPARATION OF THE SOIL.

The ground for the reception of fine seeds of vegetables, should be broken up the pre-DR. ROSE'S HAIR TONIC.—This invaluable ceeding year, and well manured in autumn, immpound for the hair has been used and highly re-commended by the lata and truly great Dr. Physic, of billadelphia. Price 31. ploughing, and harrowing, and raking .---Plough and manure deep, for deep-rooted vegetables ; but manure near the surface for all others. Potatoes and Indian corn answer well, and produce large crops in ground newly broken up. Very fine seeds should be sown in newly prepared fresh soil, and covered only a quarter of an inch deep; larger seeds deeper in proportion to their size; and the ground to be trodden hard, or rolled with a heavy roller. This enables the earth, to preserve its moisture at its surface, where at the same time the seeds may receive the necessary degree of heat from the sun, and vegetate at once, striking root

downwards. Fine seeds, if sown too deep, are liable to perish.-Kendrick's Orchardist.
