live weight and dead weight of an animal. s oftentimes desirable. From the nature of thecase, an approximation to it may be made There are various ways of doing this ; sometimes by the girth and measure of the length. Many butchers, by the experience they have gained in slaughtering and weighing different kinds of animals, can often judge with surprising accuracy. Different breeds vary very much in the comparative difference between live and dead weight. It must appear evident to any one that the greater amount of tallow a bullock has to fill up the interstices of the frame, the less is the difference between live weight and dead weight, and by consequence, the less the tailow the more the

LIVE WEIGHT AND DEAD WEIGHT.

A knowledge of the difference between the

lifference. A German agriculturist has made some observations on this subject, and publishes the following as the result:

An ox, where he is entirely lean, and therefore has no tallow, weighs 260 pounds live weight, to 100 of pure flesh in the fore quarters. With 5 per cent. of tallow he weighs only 225 pounds live weight to 100 weight of flesh. At 10 per cent the proportion of tallow, 246 pounds, at 15 per cent. 235 pounds : at 20 per cent. only 225 pounds

gross weight for 100 weight of flesh. An ox of one thousand pounds live weight weighed in a state in which he has not been

led for fattening, has, when entirely lean, therefore without tallow, 385 pounds of flesh and about 9 pounds of skin and hair, in the after increase, the tallow, consequently

to be weighed by itself, is included. This ox, raised to 5 per cent. the proportion of tallow, will weigh one thousand and sixty pounds gross, four hundred and twentyone of flesh, and twenty-four pounds of tallow. He gained, therefore, in this period of increase, sixty pounds gross, seventeen pounds of flesh, and thirty-four pounds of tallow. At twenty per cent. proportion of tallow, the same ox weighed 1350 pounds live weight six hundred pounds of flesh, one hundred and twenty pounds of tallow; the increase of this period of fattening, theretore, amounted to 134 pounds of gross

weight, 91 pounds of flesh, 52 of tallow. In the improved breeds, the amount of valuable parts which are preserved and weighed, after being killed, are, or ought to be, greater in the proportion to the offal that is not weighed, and unsaleable, than is the unimproved breeds. Indeed, this constitutes a great part of the improvement. In the selection of animals, therefore, for fattening, these points should be carefully noted, and

such animals chosen as are light in offal, and heavy in valuable parts .- N. E. Farmer. [From the Germantown Telegraph,]

ached to the tub. Some are made wider at

the top than at the bottom. Mine is so, beng only sixteen inches at the bottom, and ixteen inches to the bilge, being the same width at the top of the tub. It should have 1 rack, or something like a ladder, over the . holler to keep the hog from laying upon it, and should have a wooden roller put inside the tub, at the end where the boiler door is level with the top of the tub, to assist in geting out the hog, and have another ladder with rollers, to pull the hog on, with a couple of nooks on one end to hold it to the tuh. The wood used for fuel need not be more than two feet long. It can be heated in an

hour or two, if the pipe draws well. A tub. of this size will scald a hog that will weigh' 700 pounds. It should have a lid to it, to make the water heat quick. Mine is made of cedar plank two inches thick, with two planks on each side, and three iron hoops, one on each end, to go all the way round the tub, and one in the middle to lap over the top of each plank. PETER E. HARVEY. ' COLUMBUS, N. L., 1S51.

GROWTH OF POULTRY. 5 22 cts. 11 cts. Great attention is now being paid in this vicinity to the cultivation of poultry. Several of our citizens, men of enterprise and property, are making extensive preparations for the growth and traffic in the various kinds. Experiments are being made in importation. and in crossing breeds. We learn that one gentleman has recently made a parchase of a cock and hen, for which he paid the nice little sum of \$40. And of another we learn ? that from one pair during the past twelve months, he has realized six hundred and fifty dollars. Not a hard story to believe, when it is known that the pairs were sold at five dollars. It is beginning to be well understood that poultry can be raised and sold
