The thiel at length pro-duced a piece of gold, declaring that if plan-ted, it would produce a tree, every branch of which should bear gold. "But," said he, "this must be put in the ground by a person perfectly honest. I am not so, and therefore pass it to your majesty!"

The King replied—"When I was a boy, remember taking something from my father,

which, although a trifle, prevents my being the proper person. I pass it; therefore, to my prime minister.' The latter said-"I receive the taxes from the people, and as I am exposed to many temptatians, how can I be perfectly honst? I therefore give it to the priest. The priest pleaded that he received the sacrifices, and was equally exposed. At length the thiel exclaimed: I know not why all

According to the statistics on the subject, human-life has been prolonged materially since the advent of science and civilization, and the average duration of life is now steadily on the increase. In the city of Geneva, in the 16th century, 1 in 25 died annually; in the 18th century, 1 in 34; and at the present time, 1 in 45 is the average mortality. In the British Navy, among adults the

After hypocrites, the greatest dupes the devil has are those who exhaust an anxious existence in the disappointments andvexations wages, he that stands every day of his life behind a counter, until he drops from it into the grave, may negotiate many very profitable bargains, but he has made a single bad one, so bad, indeed, that it counterbalances all the rest; for the empty foolery of dying rich, he has paid down his health, his happi-

CURIOUS EXPERIMENTS. A friend told us the other day of a very curious experiment, which led us to try others equally curious with the same success. His experiment was this: "Take a gold ring, and suspend it by a thread about half a yard long; then hold it by the thumb and finger of the right hand over the palm of the left hand, so that the ring may swing freely as a pendulum; it will oscillate to and fro in the direction of the arm with increasing force. Then let another person form a connection between the thumb and foreinger of the operator's left hand by his own thumb and finger; the notion of the ring will change from a straight line to a circle at once, and on the withdrawal of the connection it will return to a straight line; and on touching the operator's left shoulder with the hand, the motion will cease, and the ring be at rest. We tried the experiment successfully, and found that it would succeed equally with a key instead of a ring, or with any body of proper size similarly suspended, whether of metal, or wood, or glass. We found also, the American army, with superior medical that it suspended over the knees, the pendufacilities, the mortality is said to be only lum would swing from knee to knee, and about 1 in 300.
