CARROTS FOR MILCH COWS. J. W. Lincoln, of Worcester, Mass., states by actual experiment that a peck of carrots a day to a cow, increased her milk upon no day less than a quart, and some days more, and of improved quality, while the consumption of hay was lessened ; so the carrots not only made milk, but satisfied the hunger of the cow. These experiments were varied and continued sufficiently long to prove their

Feeding carrots to horses has also been proved valuable. Two bushels of oats and and one of carrots, are better than three of oats. Land suited to the growth of this crop deep ploughed and subsoiled, properly manuced, will give a thousand bushels to the acre. Greater crops than that have been often raised. The white Belgian are considered the best to yield. We prefer the orange carrot. - The Ploir.

broadcast sowing the best, while many are in favor of drilling. My first experience in drilling two years ago, convinced me that it was the proper way. Others thought differently, and argued that our clay lands in this town did not require it. One year ago, 1 sowed two parts broadcast and drilled in one : the result was that my drilled wheat gave eighteen bushels to the acre and my broadcast nine, on equally as good ground-a loss of at least \$50, or enough to have bought # rill.-Rural New Yorker.
