without these formations. Bohemia is, in Some able writers have endeavored to acthis particular, the trchest part of Germany, although its annual productions are far from | count for the manner in which diseases un tria, and Poland have likewise their beds of unentitled to attention. As the air is ever dermine the vital powers, by a theory not coal; and the mineral is also more or less abundant in India, China, Madagasear, Van Dieman's Land, Borneo, and other East In-baye assimilated the action of these particles

Bay, in Chili. In Great Britain there are several exten-by the sugar is changed into alcohol. It is, apsive coal districts, among the most important of which may be named those of Wales, Newcastle, Lancashire, Derbyshire, Stafford-enter into a wholly new state of chemical hire, and Scotland. The veius are worked combinations. Just so animal matter, float by means of shatts and galleries, in the same ing in the air in the chemical state of change way that the metallic minerals are extracted is alled putterscence, if not sufficiently diluted, from the lodes in which they are found; but, is capable of throwing the blood, with which as the seams of coal are generally much more extensive than the metalic deposits, and state of termentation. Thus, of course, 1 as much larger masses are removed from the interior of the mines, the greatest care is re-quired not only to prevent the crushing to-gether of the workings, but also to introduce a current of air into every part of the colliery, multitudes of nucroscopic insects, which air so as to supply the workmen with fresh air for the purpose of respiration, and to prevent Conceive a minute fungus, whose poresthe accumulation of the explosive gases which floating in the air, forms the gerins of epi frequently issue from the beds of coal. The demic disease. But all the various theories very numerous varieties of coal have given brought forward proceed from the assump-rise to distinctions, founded partly on its age tion of a vitiated state of the atmosphere. rise to distinctions, founded partly on its age and appearance, and partly on its quality.--In all kinds the structure of the wood from which they are supposed to have been form-ed is obliterated, although partial impres-stons of plants, indicating their origin, fre-quently occur. The coals form a more or less compact mass, of a dark brown or black codor, sometimes dall, but more fermantic

Less compact mass, of a dark brown or black color, sometimes dull, but more frequently possessing a vitreous lustre, which often er-libit a decided iridescence. Their specific gravity is considerably above that of wood, and ther structure decidedly granular. They are always distinctly stratified, and have gen-crally a cleavage at right angles to the plane of denosition. The different laming of I deposition. The different laminæ of constant contact, as long as life holds its ful which thy are made up are usually in close dominion. How wonderfully does one sinwhen thy are inade up are usually in close contact with each other; but are sometimes separated by thin layers of other minerals— such as iron pyrites, carbonate and sulphate of lime, galena, sulphate barytes, the soda salts, and still more frequently by a double interactions of lime, that very vitality which it at once suscarbonate of line and iron. The fracture of the shining kinds of coal is conchoidal; that the shining kinds of coal is conchoidal; that of the duller varieties is hackly. Common coal, and particularly that from the newer tormations, is frequently observed to be made up of layers of different appearance—the one kind, which is black and shining, with a con-clinations of the flesh; so, too, in a physical

choidal fracture, is rich in carbon; whilst the duller varieties are of a brown color. The composition of the ashes of coal is in potic control of vitality. a great measure determined by the nature of These coasiderations derive some title to

which it is extracted; for, besides containing size are almost invariably accompanied by an

which it is extracted ; for, desides containing -less are almost invariably accompanied by an parts of the plants by the decomposition of which_the coal has been produced, they will also, to a certain degree, consist of carthly particles, deposited in the pores of the lower-lying strata. The chemical composi-tion of coals varies according to ther different most invariably caused by infinite multimudes tion of coals varies according to their different geological ages, and the localities from which growth of a species of tungus. The chils between Cape York and Cape Dudley Digges. hey are obtained; but although they differ onsiderably in the relative amount of their

timate elements is invariably found to be the same. All kinds of coal are, essentially, to composed of carbon, hydrogen, and oxygeu; the animal or vregetable kingdom, has been much disputed ; but Sir John Ross, the dislicious and earthy residue and of suphur, they usually afford traces of nitrogen, arising ratic. He has so styled them because he maintains they belong to the genus Ureda,

Among the specimens of coal exhibited. Among the specimens of coal exhibited, vulgarly known as the smut in wheat. It is there was anthracite, from Tenby, South cyident that the phenomenon of colored rain Wales; from the county of Tipperary, Ire-land; and from the western side of the Vale without² from extraordinary atmospheric of Neath, near Swansca. This substance is the oldest of all kinds of fossil tuel, and is discover the causes; but if frequently takes chiefly found in the transition formation; its place on the eve of a pestilence. Dr. Barker structure is perfectly homogeneous; its frac-ture, conchoidal; and its color of a jet black, rain, (doubtless animalcular,) near Carlow, with a vitreous lustre, which frequently shows a powerful play of colors. This coal (cident with the outbreak of the cholera in contains an extremely large proportion of that town. The belief in a connection between both constituents, and is consection between both

constituents, and is consequently totally unfit for the manufacture of gas, although well India; and though perhaps it receives an used in iron furnaces where the hot blast has witnessed and recorded .-- Dublin University been adopted. Magazme. The per centage composition of two of the
