wife, a most amiable creature, had a mortal hatred of liquor; and though Tom often indalged on the sly, with his convival comside up. on going home. He would not or for good toast; the nearer you can keep it have his wife find him in such a state for all to a straw color, the more delicious to the nately fallen to her lot.

" Lom, one morning, said she lovingly, may be changed mount ought which the following cures, performed alone by the use have been a wedded couple half a year. Ways a tendency to undergo accious fermen. Lot BULL'S HARBAYARILLA, see not wonders and never once have I had the slightest oc-

the dark, and then she won't notice my eyes." ruminated Tom. "But hold on-she'll smell my breath-how can I fix that?"

He puzzled for a few moments, and in the end concluded to seek the kitchen, and meddle slightly with the spice-box. Down the sione stairs he went, and after putting his hand into half a d zen various fluids, feeling a row of pans, jugs and dishes, at length be found a handful of cloves, which he thrust into his mouth as if they had been so many sugar plums."

T-they're d-devilish h-hot," spluttered Tom. with his face all a glow; "but they answer the purpose. How I wish Bob Styles were here to tell me whether the brandy is sufficiently disguised." Satisfied that the fragrance of the clove

had out-odored the scent of the " ardent," he mounted the stairs, and with the exception of a couple of small tumbles, gameit his chamber in safety. Now he would have been happy had not his wife been wide awake. "Why, Thomas, how late you are," said

she: "where is the candle? "Oh, never mind the candle," said he in as steady a tone as he could command-"it's

"I should judge it was very late," said she, "dear me, I must have that clock fixed." "Y-e-s, so' we must," said Tom, wit mirsculous deliberation, for one solitary hiccup would have betrayed him. As to the clock's uncertain condition, it was a phe nomenon of good luck for him. "Does it look like rain, dear ?", kindly i quired Clara. -

Now, if Tom had been put on his oath, he could no more have answered correctly, in regard to the appearance of the weather, than the man in the moon, and not half so much. for it is fair to suppose that if there be a man in the moon, he is not addicted to the practice of drinking, and therefore keeps a bright look out on things below. He replied gradually-"Pon my word

don't know, but I'll look," and feeling hi way to the window, he threw aside the curtains, and a bar of pale starlight threw itself immediately on his wife's tace. "Clear as crystal, you perceive, dear," and down went · Clara was very thoughtful and affectionate

and suggested that if the cuttain was kept up he could see his way better about the "No, no, dear," replied Tom, very slow ly, as before; "I have heard that starlight

produces lunacy after"-midnight he was about to say, but he caught himself dexierously, considering his situation-" and that

is dreadful you know." presently his wile caught a whiff of the

and how dreadful you smell of cloves."

had been embalmed like a mummy."

"Pew! you are regularly scented with them. Where have been to-night? Tom was entirely thrown off his puard his brain rambled, and without the remotest idea of what he was saying he replied. "why -hic-Clara, the fact is I have just been on a little trip to the East Indies, and while I was there I fell over a spice box." This told a tale. Clara immediately sar

up in bed and shed tears. The cat was out of the bag, and we should not be surprised i a real Caudle lecture as long as a Charity sermun, was the consequence of poor Tom's unfortunate slip of the tongue. He has never touched cloves from that day to this , and it is probable, ere long, he will avoid the bottle entirely, his wife insisting that every one that driales must sconer or later keep company with a subterraneous person distinguished from the rest of mankind by a remarkable species of tail or cloven foot; this latter adomment would keep Tom out of his road, it nothers are not subject to the subject of tail or cloven foot; this latter adomment would keep Tom out of his road, it nothers are not subject to the subject of tail or cloven foot; which they spread to catch the force of the little state, in Boxes is rice, of the latter in the latter and at drinks must sooner or later keep company

DWHY NAY real philosophers be considered to have done much by their own inventions for the useful arts? Because the chemical or mechanical manufacturer has mere ly spplied what the philosopher has made trial furnished to him. Thus, the chloride, or coymuriatic gas, of Scheele, was scarcely known, before it was applied by Berthoflet to bleaching; scarcely was muriatic gas discovered by Priestly, when Guyton de Morveau used it for desiroying contagion. Platinum has owed its existence, as a useful metal, entirely to, the labors of an illustrious.

| Applied what the philosopher has made known; helder the has merely worked upon the material furnished to him. Thus, the chloride, or coymuriatic gas, of Scheele, was scarcely known, before it was applied by Berthoflet to year.

| Two bettee of Bull'a Sarraparilla made a perfect core and made a perfect core of Bull'a Sarraparilla. Two bettee than it has been for year.

| Compositor at the Demogration of the theorem of Bull's Sarraparilla. The best of the principle of chrome, consider the medical effects of ioding, (BABSAPARILLA," raof Kentreny, in quant malleable; but we know that platinum could only have been worked by a person of

into meter oute have I had the slightest octation to reproach you."

Of course Tom was delighted to hear his little wife talk so encouragingly, and express her happiness at his behaviour; and here peated the assurance of his determination always to be an attentive and sober husband. But in the ocean of life, how little we can foresee the breakers of temptation. Tom had to dine that evening with the "Owis," (the ornichological title of his club,) and he felt into dimerable spirita, and his health was drunk warmle and frequently after the removal of the cloth; the consequence was, that by the time the company had seperated, he was in a happy state of elevation, with a vivid notion of men, women, and all things terrestrial.

"Hec-c., I r-really believe I'm d-r-runk!" solliloquized Tom, poising himself on his

ABOUT MILK. Mr. William P. Fogg has given some luable knowledge on the chemical property of milk and butter, which every dairy man or woman should read. We will give a few extracts from his remarks:

The ordinary temperature of new me

s from 65 to 70 degrees. To the naked en scems a pure white liquid; but when rethrough a microscope an infinite nume. of minute globules appear, which contain a ... oily part, or butter. When the milk is away in the dairy, these oily partieles, bethe lightest, gradually rise to the surface; form the cream. But when milkels expoto the atmosphere, the oxygen absorbed it, slowly changes the milk augar mio win is called lactic acid. This acid causes ... becomes sour. The curd of sour milk is ways tound to contain more or less but sometimes as much as two per centi, or on half the whole quantity contained in milk; (the best milk seldom contains to per cent.) This arises from the fact that lactic acid is formed before all the built particles have had time to rise to the suria Hence, the longer we can keep milk save the more cream we can obtain." Mr. Fogg gives the following process

preventing milk from becoming sour, but upon the chemical principle of adding का kali which shall combine with the and fast as it forms, and neutralize it: "Carbonate of soda is the substance via experience has proved best adapted for . purpose. It is perfectly innocuous, and w. nure, imparts no disagreeable flavor w milk or butter. Half a tea-spoonful dischein water and mixed with four quarts of m. will keep it sweet four or five days. Ha .. ry warm weather more than the above on

tity of soda is required .- Maine Farmer INDEPENDENCE OF FARMERS The merchant or manufacturer may robbed of the reward of his labor, by chage in the foreign or domestic market entire's yond his control, and may wind up a to in which he has done every thing which telligence and industry could do to me success, not only without profit, but we'l actual diminution of capital. The staarm of mechanic industry may be entert. or paralzyed by the prostration of those nufacturing or commercial interests to wh existence it so essentially contributes, and whom in turn it so essentially dependwhat has the industrious farmer to fear His capital is invested in the solid guin he draws on a fund which from time mumorial has never failed to honor all just & mands; his profits may be diminished deed, but never wholly suspended; his secess depends on no merely earthly guarant but on the assurance of that great and to: ficient Being, who has declared that wh. the earth endureth, seed time and harps, hall not cease.

STRAWBERRIES AND ASPARAGIN Now is a good time to make beds of ex Dig deep-make rich and mellow a bed og . feet wide and twenty feet in length. Rung ally, lengthwise in the centre two feet a. leaving three feet on each side. Then set in each, three rows of Strawberry roots or inches apart. Be patient, keep them chanweeds-cut off the runners-dress them ; early next Spring, and the delicious frum w er. For Asparagus make two similar bes. but spaded doubly deep and make very re--plant three rows of gerds ten inches opetwo in a place, an inch deep. Keep free h 🥌 weeds, be very patient, and the third ve covered with coarse manure during the w earth loosened with a large fork, being co tioned not to injure the crowns, will s abundantly ten or twelve years.

A NEW WHEAT A very singular discovery has lately b made in France, by M. Fabre, a gardener Ayde. The herb ægilops, heretofote cutdered as worse than useless, grows abundanly on the shores of the Mediterrantan. roduces a species of grain resembling who a form, but much smaller. In the year 1839, M. Fabre sowed a quantity of the grain, and he found the produce bore a cier. affinity to wheat; that produce he sowed : next year, and the yield was still more in wheat. He went on sowing the produce each year the succeeding year, until he has now succeeded in getting as fine a crep wheat, and of as good quality, as can wished for. Thus he has proved that a w. and mischievous weed can be educated ... excellent wheat. We find this in a fore.

agridultural journal. Your readers musicas ercite their judgment as to the credit dothe statement .- London Correspondent by tional Intelligencer. GRAFTING LARGE TREES. remaining limbs. The following season in off only a part, say one-third, and there would not cut all at one time, but a part'er-

ily in the spring, and the rest in June 300 in doing this do not prune all glose to be trunk, but only shorten a portion of them By the third spring after the scions are serted all the old top may be removed .-sooner if you regard the well being of The tree. The wounds should be covered with some suitable preparation, to protect from the weather .- Rural New Yorker.

It is not perhaps generally known that we of the best articles that can be given to swill n preparation for the tub, is common ent coal. The nutritive properties are so gree that they have subsisted on it without offfood for weeks together. Geese confined. as to deprive them of motion, and fattener on three grains of corn per day, and as mu, coal as they can devour, have become by eight days. The hog eats voraciously afa little time, and is never sick while he be a good supply. It should always be ker the sty, and be fed to the inmates regula like all other food.

TO CURE RINGBONES. The horse must be cast. Behind the h oing above the foot is a tuft of hair, growigg upon the point, and called the fetlock; in ' centre of this point an incision must be made an inch and a half long, perpendiculant Through the skin, and a white, skinny a stance presents itself, resembling a bladder insert a hook in this tough substance, and little cutting, on either side, takes it out Experience in hundreds of cases, has profethat this method will cure the lameness. In sitively, but will not remove the ounches which, probably, cannot be moved by 250 external application whatever.

POTATOES IN OREGON The Oregonian gives, as the product one hill of potatoes grown in a field of severa ecres, and without any extra culture, our hundred and ninety-nine potatoes, weightal fifty-three pounds. The product of severa hills in the field weighed over thirty pounds to each hill.

BORERS. Borers can be ferreted out from about the roots of fruit and shrub trees by removing?
