THE PACIFIC BAILROAD. Mining & Scientific In the course of an admirable speech recently made by Senator Bell, in the Whig Convention of Tennessee, he alluded by a railroad to the Pacific, as one of the mist magnificent projects of the age, and one hot less important as a measure of defence and security to our possessions on the Pacific. Of Coal and Transportation Companies in and ran-ning from the Anthracite Coal Fields of Pennsyl was demonstrable, he said, " that the cist in construction would fall far short of the expenses of any war in which we might be engaged for the protection of that coast, with out the advantages of such a mode of trate-between the valley of the Mississippi and tion that distant frontier. In a war with any great maritime power, in fact, all other means of access might be impracticable of 50 441 441 50 743 741 only, practicable at an insupportable eist. But such a work was demanded by other considerations than such as was merely mil-itary and defensive. It was apportant and indispensable to the full development of this resources of the country. It was a work likewise of political necessity, if we want to consolidate and perpetugie the union between the Atlantic and the growing communities on the Pacific. It was a work of incideula-ble interest to the inliabitants of the scatter valley of the Mississippi especially. "The en-100 1181 119 terprising young men of the country-menwith or without families-possessed d small means, but of the laudable ambition of improving their condition, could not now reach California but by a redious overland Sources. exposing them-to great privations, or la a voyage of thousands of miles, at a cost exceeding the means of many, and always a the hazard of contracting the diseases of tropical climates. Construct this great readpopulation could reach this new land of gede. 50' 50' 55 50' 50' 52 en promise in eight or ten days, and attait trying their fortunes there, filling their part. 50 | 25 | 30 25 | 13 | 18 ets, if they are industrious, with their fair proportion of the public plunder, now through

open to all the world, it they choose, they could return again to their native lottes UMBRELLAS.

It is estimated that the umbrella and rate asol trade of New York city is equal to \$1. 500,000 per annum--chiefly conducted hi ser quakes. Those who entertain this beliet have | en different firms. One of the largest is that of Isaac Smith & Co., who employ 325 perfacts to prove that volcanic eropuons and sons in the various departments, include carthquakes, are in general simultaneous and 250 girls, and facilitate the manufacturate confined to the same localities. This, how- processes by using steam power. Macuation ry is principally used for sharpening the place when and where there are no volcanic sticks and "stretchers." or whalebones, may for drilling holes for the rivers. Durant

A correspondent of the " London Mining considerable, part of the year, from here Journal," named Drummond, writing from 1500 unibrellas and parasols are durad Contrie, in North Britain, presents a theory daily, and \$75,000 worth of silks and sight entirely different from that of igneous action : hans are sometimes consumed in the scheme he attributes earthquakes to electrical influst of three months. Generally the manutatia ences, and we believe that Sir Charles Lyell ; rers have different parts of the tumbrelistima has expressed a belief in the same agency by different parties about the city then Mr. Drummond resides in a district where this instance, the various branches are redumany shocks by earthquakes are felt every | ced to a system, and the whole is prostruct year, and some of them have been so severe within the walls of a single establishment as to overthrow houses. The place is a high " Utabrella handles, are principally made a land village in the bosom of a mountanous Pennsylvania, and the ratians in Wilhams country, and the shocks are never selt at burgh and Philadelphia, where large manner many miles from it, hence it must be the cen- tactories are established. There' are, in m tre of the earthquake's influence. He states umbrella, 112 different parts ;, and before l. that no shocks have ever been telt during ing perfected, the umbrella passes through easterly or westerly winds. All earthquakes nearly as many different hands. Surprising that took place there were preceeded within celerity is acquired in pluting the parts to I hours by much wind and rain, but they | gethern so that an untifulla is easily comhave taken place oftenest in dull, thick, wet menced and completed within the space weather. The shocks were not telt slike in I two hours, and might be finished much some **READING STEAM FORGE** THE SUBSCRIBER, having been appointed General Agentifor Schuvikil County for the Reading Steam Forge, would most respectfully in-form the public in general, that he will receive all orders for Iron forged to pattern. or draught; which orders will be punctually attended to, on the short-est po-sible notice, and at the regular Forge prices.
