GENERAL ADVERTISER.

SHERIDAN.

WINCHESTER AND NEW ORLEANS

With trumpet's cry and roll of drams, This way the tide of battle comes; All the vast space of the hills. The thunder of the cannon fills, Nearer it comes i. And who are these, Like broken waves of storms seas, Long lines of shattered thue they meet In route, confusion, and defeat? Up the long road the columns fly, And still the fierce triumphant cry Pursues, and you dark cloud of gray Comes surely, swiftly on this way.

I will teach you to pierce the Bowels of the Earth, and bring out from the Caverns of Rountains Metals which will give strength to our hands and subject all flature to our use and pleasure .-- DR. JOHNSON.

Now, for that crushed and ruined host is victory forever lost! Northward it files, and Northward comes The roll of Early's Rebel drums: Our banners in his ranks are flying : His march is on our dead and dying Northward he comes, and who shall stay, His swift, resistless lines of gray? But one stern face is Southward set:
But one man is not beaten yet;
Not yet, though all besi es should fly,
Not yet, though faithless victory
Perches on Rebel flags forever.
The corps is whipped—the General, never,
Lo! 'its an army that hath fled,
And none are heroes but the dead,
Then riding down the valley far
He brought a soul into the war,
Swift came the trampling steed, more swift.
The rider's spirit; as he came
His voice went forth before his sword,
And elew the fears of men with shame.
Then when he met the mighty route,
What was his order! — "Face About!"
As faine through flame the order ran;
Southward they faced, yea! every man
Faced South—they cheered for Sherndam.

and destination of either sex is not fully de-veloped, and which is therefore called child-Ah! right well Jubal Early knew
Who hurled that avalanche of blue;
He knew whose hand had turned the flight,
And struck full in the face his van;
Too well hed felt in many a fight
The strong right arm of cheridan. hood, so long both sexes may with perfect safety enjoy the same instruction. But as And he who led our legions onward,
And hore their darkened banners ennward,
Not less in peace than war was great
But as he marched an army, raled a State—
Straightforward, pausing not, nor turning,
All his great son! within him burning,
To do the right thing, and to do it well.
What mattered it to him who should oppose;
He loved his country better than his place,
And those who hated un:—he held his foces.

Anu mose who hated ur:—he held his foes.

This was your crime. O Sheridan I that you when bad men traded in their country's sin, Maintained her honor, and enforced the right. To hold the victory you fought to win. Defeated? Yes, but glorious such defeat! Conquered? Ay, only when the Right is slain, Thou art become x principle to us, And as a principle shall rise again. I know that Truth shall triumph. Not in vain Men suffer in her cause; thy name shall be The railying cry of milliors who maintain High in the stars the banner of the free.

Thy country's foes may boast they overcame, But thine the glory is—their's the eternal sham essary for us to prove:
Male and female nature is different.

Educational.

la the question of the research to the season, and the control of the public, and it is but proper, and particularly of the scheen, to treat it with the utmost fairness and control in question we own an obligation to public opinion, nor to prejudices the scheen to treat it with the utmost fairness and control in question with the properties of the scheen to treat the public, and the scheen to treat the public of the pu under the influence of different factors is led towards his destination, until he himself is able to progress towards it with confidence." Thus, as will be seen, the grand aim of education is, that the pupil shall reach his destination. In order that this grand aim may be reached, a countless number of factors are employed. The whole earth is an institution of education. Everybody is a pupil, and everybody is in a certain sense an educator. All factors of education may however be classified as follows: 1, the family; 2, the state: 3, the church; 4, the pupil's own cator. All factors of education may noweyer be classified as follows: 1, the family; 2,
the state; 3, the church; 4, the pupil's own
the state; 3, the church; 4, the pupil's own
experience; and last, but not least, the
school. Of all these factors it is only the

MINING, ART AND SCIENCE. PNEUMATIC PUDDLING.

After these remarks we will not hesitate a oment to show our colors relative to co.ed-We are not in favor of entire co-education nor are we in favor of an entire separation of the sexes. We say, as long as nature, custom and language recognize a period in the devel-opment of man, in which the peculiar nature

safety enjoy the same instruction. But as soon as nature compels custom and language to recognize a different destination in either sex, then let us use instruction which is in conformity with the character of each sex. This is not carrying water upon both shoulders, since we demand a separation of the sexes in that period in which the friends of co-edu cation demand a union of them.

But we strongly advocate that either sex should receive that kind of instruction which is in harmony with the peculiar nature and declaration of the sexes and then pudding with a common table for half an hour longer. The average time of his heats, with 4 cwt. charges, and should receive that kind of instruction which is in harmony with the peculiar nature and destination of each. Thus we can heartily unite with the "fair sex" in protesting against the partiality of the State in having so bountfully provided for the higher education of her sons, whilst unjustly neglecting that of her daughters. In order to justify our position on this importent question, it will be logically necessary for us a prove

THE WILSON FURNACE. - The Wilson furnace—in other words, the downward draught puddling furnace—has been stamped with the broad seal of success. At the Bolton Iron-and Steel Company's Works this furnace is 1. Male and female nature is different.

II. The destination in life of each is different.

III. That these different aims require different means.

I. Male and female nature is different. The

aud Seet Company's works this turnace is puddling 20 cwt. of blooms from 21½ cwt. of pigs, and this with but one ton of coal, and this again without smoke. Nothing like this again without smoke. Nothing like this has ever been known before in puddling.

Mr. Wilson has stood by his furnace from I. Male and female nature is different. The first to last, and is now making the reasons of its singular success understood. It is simsture of man is two-fold, physical and paybalances, subject to check at sight.

Make collections on all accessible points.

All issues of Government Securities credited or remitted for, on receipl, at market rates, Fraz of all commission charges.

The Normal School for the 3d District, of which Schuylkill County is a part, is situated at Kutztown, Berks County, and will recommended in the company of the c a ton of puddled blooms to a ton of coal, and

This fact, that the female sex is physically | that without smoke, and with but a minimum should not be, and we trust the next catalogue we receive will show more students from this County.

Book Norice—We have received from S. II. Crittenden & Co., 637 Chestnut Street, Philadelphia, a copy of "The Crittenden Company of Company Philadelphia, a copy of "The Crittenden Commercial Arithmetic, or Business Manual," a neat little book of some 215 pages. From rather a careful perusal, we are much pleased with the work. The main object of the book is to impart a practical knowledge of business transactions. Every business man and teacher at least, should have a copy.

By request we publish the following article from the Pennsylvania School Journal for studies, and after them the real university course of such universities as Paris, Berlin, Vienna?" we do not think we could answer with the following ingredients—carbonate of this query with a good characteristics.

this query with a good conscience in the affirmative. The monthly rose and the garden rose are both roses, it is true, but the one who exposes the former to the cold storms of whother will find it will parish whilst the late. wind exposes the former to the cold storms of common salt, 1 to 3 parts. The iron coated ter may endure.

less passion, less self-reflection yet more dex terity in apprehending others, more self-sacrifice for others, more cheerfulness and gayety, but also not seldom more fearfulness and humor, more silent endurance, but also more cunning and trickery, more dexterity and gracefulness in expression, more easiness and skill in less extended but delicate activity.

The more specification yet more dextended to the blast in control to the pulverized carbonaceous matters; these pulverized materials are carried into the furnace by means of the blast in any desired quantity, according to the quality of iron or steel it is desired to produce, and depending upon the nature of the iron to be operated. upon the nature of the front to be operated upon. Every iron and steel manufacturer will know that iron ores differ so widely in their character that different ores will require totally different treatment, and that

Cure guaranteed in every case, when applied according to the directions inclosed in each box, or the money will be refunded. Write for a Circular—sart graits.

Address; Dr. J. STEPHENS & CO., Oculists in the control of the BALDWIN LOCOMOTIVE WORKS. M. BAIRD & COMPANY, Broad and Hamilton streets, Philadelphia, Penna. Would call the attention of Rallroad Managers, and those interested in Rall-Nov :4 '68

Would call the attention of Ballroad Managers, and those interested in Rail road Property, to their system of Locomotive Engines, in which they are adapted to the particular business for which they may be required; by the use of one, two, three or four pair of driving wheels; and the use of the whole, or so much of the weight; as may be desirable for adhesion; and in accommodating them to the grades, curves, strength of superstruction, and rail and work to be done. By these means the maximum useful effect of the power is secured with the least expense for attendance, cost of fuel, and repairs to Hoad and Engine. With these objects in view, and as the result of twenty-three years practical experience in the business by our senior partner, we manufacture five different kinds of Engines, and several classes of sizes of each kind.—Particular attentio. paid to the strength of the machine in the plan and workmanship of all the details. Our long experience and opportunities of obtaining information, enables us to offer these engines with the assurance that in efficiency, economy and durability, they will compare favorably with those of any other kind in use. We also furnish to order, wheels, axles, bowling or low moor tire (to fit centres without boring,) composition castings for bearings of every description of Copper, Sheet Iron and Boller Works; and every arricle appertaining to the repair or renewal of Locomotive Engines.

| The Company of the Co

the other Counties in the District. This mental nature.

com the Pennsylvania School Journal for THE CO-EDUCATION OF THE SEXES. The question of the co education of the sexes is of modern origin. This fact by itself, does not prove anything in favor nor against it. The question is presented to the public, and it is but proper, and particularly for teachers, to treat it with the utmost fairness and candor.

In answering this question we owe no ob-

hool which educates man systematically.— In this fact lies the great importance of school education. That is, the school claims to be education. That is, the school claims to be conscious about the nature of the pupil, about his destination, and about the means, which if properly applied, will lead towards that destination with a reasonable degree of certainty.

The school intends to lead the pupil to words his destination, by a gradual, natural development of his mental powers, on a material practically useful. That is by instruction.

Before we state whether we belong to the friends or opponents of co education, may we be permitted to mention, that we did not arrive hastily at our fisal conclusion in this important matter. We consider the wish of woman to be educated side by side with man as a noble attempt to elevate the sex. We consider this attempt far more noble than others made for the same purpose, such as "woman's rights." &c We look upon it as a protest against the partiality of the state in providing so amply for the education of the boys, whilst neglecting higher education of the girls. But it seems to us that the most of the upper part of a puddling furnace, for the purpose of blowing streams of steam in con-tact with the fluid metal in such furnaces; the girls. But it seems to us that the most of these noble attempts are made in a wrong di-rection. The true elevation of the gentler sex must in our opinion lie within their own na-ture and destination, and not in the imitation and I mention these facts in order to state that I make no claim to the introduction of streams of steam into a puddling furnace where iron is undergoing the process of puddling; but what I do claim is, forcing air into or below the archive and a stream of the stream of t of their brothers. Every attempt in this di-rection is a silent admission on the part of woman that she is inferior to man.

For if we imitate somebody, we silently to or below the surface of fluid crude or cast admit that he is superior to us, at least in that that of woman is something we do not be-lieve, nor is it to be supposed that the members of the fair sex will admit any such con-

For if we imitate somebody, we silently admit that he is superior to us, at least in that quality for which we imitate him. And that the destination of man is more important than that of woman is something we do not bemaking malleable iron, an iron pipe having a piece of burned fireclay at one end, and a flexible pipe at the other, was used to convey the air into the molten iron; the elastic pipe the air into the molten iron; the elastic pipe allowed the blast pipe to be put down into the iron or windrawn at pleasure.

Why does Richardson use a rabble to convey the sir into the iron, or, rather, why does he call the blast pipe a rabble at all, since it is not used as such; for he says, "As soon as the blast is withdrawn, the charge is attred that if a the radiance with he acquired rabble. about in the ordinary way by a common rab-ble until the iron has separated from the clu-ders in lumps, after which it is collected and balled up in the ordinary manner?"

Indeed, if the hollow rabble were used to stir the metal after the blast is turned off, the particles in it would be immediately filled up.

time of his heats, with 4 cwt. charges, and including melting, was 1 hour 11 minutes.— Engineering, London, August 9th.

Some experiments have been made in Glagow in puddling iron with the aid of a movable blast pipe called a "tubular rabble," not that it is used to bring successive portions of the melted pig up to the surface; to be acted upon by the open air, but it resembles a rabble in sppearance, and its end is dipped into and moved about in the metal so as to introduce in the compressed air in streams at all parts of the charge. This use of a movable blast pipe is described at some length in the moved about in the metal so as to introduce in the furnace from 10 to 40 per cent. of splegeleisen or titanic iron in a pulvers of the charge. This use of a movable blast pipe is described at some length in the moved about in the metal so as to introduce into the furnace from 10 to 40 per cent. of splegeleisen or titanic iron in a pulver state, parts of the charge. This use of a movable in the produce a tough, soft iron, he introduces from 2 to 10 per cent. of pot or pearl sab, or soda sab, or carbonate of soda.
