## Some Powders, Perfumes, and Flavors,

A charming receipt for scent-powder, to be used for wardrobes, boxes, etc., far finer than the mixtures sold at the shops, is the following : Coriander, orris root, rose leaves and aromatic calumus, each one ownce; lavender-flowers, two onnces; rhodium wood, one-fourth of a drachm; musk, five grains. These are mixed and reduced to a coarse powder. The scent on the clothes is as if all fragrant gar-den flowers had been pressed in their folds.

A perfume for note paper, said to be that used by the Queen of England, is made of powdered starch, one-half ounce; freeh orris powder, the same; otter of roses, ten drops. Put this in a bag and keep it in the writing-desk with paper. All delicious flavors may be impro-vised by keeping the substance in

vised by keeping the substance in deodorized alcohol. How deodor-ized? By filtering through animal charcoal or bone black in powder, the black may be used many times over; a thick fisnnel bag, with wire at the top, will answer for a filter. Fill it with the black dust and pour the alchol in it, leaving it to settle through. Have widemouthed bottles with glass stoppers ready, and fill with alcohol; then fill with powdered or lemon peel, peach leaves, almonds, slices of pineapple, raspberries, or fresh cherries, and you will have a finer assortment of flavors than any manufacturer can furnish you. If you wish, however, flavors which are out of reach, it is best to use compounds

of which you are not ignorant. Banana may be imitated with oil of jasmine and a very little tartaric acid. Strawberry, with a very strong tincture of orris and a very little ascetic ether-one ounce of the tincture and one-eighth of ether.

Strong tincture of orris root resembles raspberry. Pinespple is made of butyric ether,

the soid itself coming from the trans-formation of rancid butter by a chemi-

Very little of these preparations is needed to give the desired flavor. Four ounces of the tinctures mentioned will supply flavor enough for constant use during the whole summer.

## The Lobster.

When a lobster shakes hands with you, you always know when it takes hold, and are exceedingly pleased when it gets done. They have small features, and lay no claim to good looks. When they locomote, they resemble a small boy shuffling off in his father's boots. They are backward, very. They even go ahead backward. They occasionally have a row like other people, and in the melee sometimes lose a member, but have a faculty of growing out another. Their process is patented both in this country and in Europe, which accounts for its not coming into more general use with the human lobster, so to speak.

A lobster never comes on shore unless he is carried there by force. They are afflicted with but one disease, and that is boils. There is more real excitement in harpooning a whale, or in having the measels, than there is in catching lob-

sters. The fisherman provides himself with a small hencoop, and has therein, as enticers, several dead fish. He then rows his boat to the lobster ground (which is water) and sinks his boat to the bottom, anchors it to a small buoy (one from eight to ten years old will do) and then goes home. When he feels like it again, say in the course of a week or two, he goes back and pulls up his poultry-house, and if he has good success he will find the game inside the coop. As an article of food, the real

Woeds. FARM AND HOUSEHOLD. It is a well known fact in the science of agriculture, that many of our most prized vegetables and fruit-bearing trees KEEPING EGGS FOR WINTER .- At dif-

were originally weeds and useless shrubs and, by neglect, they may degenerate into the same useless annoyances. The carrot is a native of Europe and the East, where it grows wild; and even here, when the seeds are allowed to scatter themselves profusely over the ground, and remain unmolested for a few years, become one of the most persistent

and incorrigible weeds with which we have to deal. They exist on the road-sides in some of our best farming towns, the bottom a layer of oats, and set my eggs all point downwards, so that not touches the other, until the layer is full ; then cover with oats and make anso as to cover the ground with a dense, unsightly vegetation some two or three feet high. The number of seeds which other layer, and so on until the box is full, and then cover and set in a cool, feet high. The number of seeds which they produce is beyond calculation, and when ripe, are scattered by antumnal winds over the fields of all adjacent farms. The same is true of the parsnip, which produces many seeds, and when these are neglected and suffered to sow themselves at random, they spring up the next year, go to seed, speedily de-generate and in the course of a few years become a troublesome weed. The pota-to was originally small, and was not tolerated as human food for a long time. n limewater, and even varnishing them, They are mentioned by old writers as a "delicate dish," and that they were roasted, and then steeped in sack and because my way seemed to me the simplest and cleanest, and I am just as sure to have good eggs next February and March, which I lay in now, as I can sugar, or baked with marrow and spice. They were long considered as inferior have good eggs now. There is no danfood, and it was not until the middle of having any musty taste to the ger of the eighteenth century that they came eggs if you keep them in a dry place, and are careful to use dry oats -A Farinto general cultivation. A strong prejudice long existed against them in mer's Wife, in Country Gentleman.

France, but they are now cultivated ex-tensively, and a market in Paris is ex-THE CRUELTY OF STANCHIONS FOR clusively devoted to their sale. Now CATTLE .- A correspondent of the Prairie Farmer pronounces stanchions a mild form of cruelty to cattle, and we fully they are introduced into almost every quarter of the globe, and the varieties agree with him. He adds : " When cows in use are entirely the result of cultivaare sleeping, they invariably bend their tion. Celery also was originally a tough acrid plant, unfit for man or beast, as necks and rest their heads at their sides. food, but is now esteemed a great delica-cy. Chiccory, the root of which makes This must be their most comfortable sleeping position, of which they are deup a considerable portion of the coffee of the shops, mixed with ground peas prived by stanchions. A cow ought never to have less than three feet by five and one-half feet space to stand and lie and a portion of the genuine article, is down in, and the fastening by rope, chain, or bow gives it, provided the short one of the most tenacious plants in existence, and if not carefully suppressed will overrun the whole farm. The root is large, quite long, and holds on to the chains are regulated accordingly." But, it is urged that stanchions insure increased cleanliness. In a properly built soil with such tenscity that a plant of cow stable, cleanliness is insured by other means. There should be a trench two years' growth requires a man's strength to pull it up. It is cultivated largely in England as a substitute for behind the stand from six to eight inches deep. This prevents the cows from stepcoffee, and in this country its blue blosping back to lie down beyond the intendsom is seen in great profusion along the ed space. The droppings will fall into roadsides during July, August, and Sep-tember. It is also well known that the the trench, and only in cases where cows peach was originally a poisonous bitter almond in the wilds of Arabia, and the are eating and have stepped forward, their droppings will fall on the stand. But there is even a provision against tomato a poisonous weed of the nightthis, by making the cows get up a few shade order. By the use of persistent skill, many plants may be brought up minutes before feeding. In most cases tn-y will drop their manure as soon as from a bitter, tough, or pungent condithey get up. When done with the feed-ing a hand may go behind the cows with tion, to a mild, succulent, and tender state, so as to furnish a large amount of

and beast; and all these mentioned above, as well as many others, have a tendency to go back to their original condition, and if allowed the opportunity would probably do so. By careful cultivation, however, we can preserve them

wholesome and nutritious food for man

## "Delectable both to behold and taste."

feed, in the shape of oil meal, will be and give us no trouble as trespassers amply repaid in the yield of milk and butter. It must not be supposed that upon cultivated crops in the form of unsightly weeds. We can also receive a because a cow is on pasture there is no lesson in ethics here that will be usefu longer any need for stimulating food in governing us through life. Many of The fact is, that with an ample supply of grass, the appetite of the cow for the our loves and aspirations have been cul-tivated from base passions and desires, even as Darwin teaches we have progressed from lower creations; and it should be our study to so watch our actions, and guide our loves into proper channels, that they shall not degenerate

## A Nevada Silver Mine.

Says a correspondent: I put on an old-suit of clothes, and, with the Superin-tendent of the Grown Point Mine, drop-ped suddenly down a perpendicular shaft one thousand feet into the earth. ferent times I have read in your paper many ways in which farmers' wives lay many ways in which farmers' wives lay in eggs for winter use, but I never saw the way I do it, simple as it is, if I have only good eggs, and good eggs every-body must have, or they will not keep in any way. In August I generally com-mence saving eggs, and am very careful to save only good and fresh ones. I take bexes which hold about 1,200, put on the bottom a layar of casts and set my The temperature was at more than one the introduction of Dr. J. Walker's Vinhundred degrees Fahrenheit, and the egar Bitters by Dr. R. H. McDonald. miners were sweltering at their labor Previous to 1867, the sale of these bit-like the workmen in a rolling mill. Nothing is better for colic than boiled lobster. will bring on a case when cucumbers have failed. For a sudden case, we advise them crumbled in milk. Esten at the right time, and in proper quantities, lobsters stand second to no fruit known.

## To a Young Girl.

You think you love the young man who is coming this Sunday night to visit you! And he acts as if he loves you! Suppose he declares himself, and asks you to become his wife. Are you prepared to say to him, " I love and will trust you through life with my happi-ness, and the lives and weal of our children ?"

He is jolly, gay, and handsome, and all the darts of Cupid are twinkling and sparkling in his eyes, but will those eyes always find expression from the love of a true soul? To-night he says many pleasant things, and draws pretty pic tures for the future. Does he go to-morrow to work which gives promise of the fulfilment of your desires in life? Do his ambitions and achievements satisfy you? Does his every-day life shine with the noble endeavors of a trust-worthy man? If you think, and desire a companion in your thinking—one who can unlock the deepest depths of your mind—to what strats of humanity does he belong in the scale of excellence and morality? Is he doing all he can to build up future usefulness and happi-ness, in which you can share and feel blessed? These are the questions which the experience of after years make many women weep in bitterness of soul that they had not thought of before they answered " Yes."

The Manufacture of Tobacco. It is reported, on reliable authority, that in Manilla, besides the large num-

ber of men and boys engaged in the pre-paration of cigarillos and cigarettes, there are over four thousand women employed in the great tobacco-roll mannfac ed in the great tobacco-roll mannfac-tory. More than eight hundred of these women work together in the same hall; they sit on the floor in the Hin-doo fashion, and each woman daily re-ceives a certain quantity of the three kinds of tobacco required in the making of eigars, and out of this she is obliged to formis a specified number of rolls of to furnish a specified number of rolls of equal size. About three years' time is necessary to prepare the tobacco leaf for the consumer. The health of the work-men employed in the manufactories is men employed in the manufactories is generally very poor, owing to the mephitic emanations they are daily obliged to breathe. By their constant handling of the plant, the poisonous substance is absorbed through the pores, which enfeebles their constitution; and the generation following and still and ceeding remember the Scriptural maxim, that "the sins of the fathers (and mothers) shall be visited upon the chil-dren unto the third and fourth genera-tion." Watery brains, weaknesses gen-erally, sluggish blood, and idiocy, are the results. the generation following and still suc

into sensuality and lust, but rather ripen into the loves of the angel-world.

The opening of the European and North American Railroad will furnish continuous railroad communication from Halifax to San Francisco, with the exception of a gap of seventy-five miles between Amherst and Truro, which is expected to be finished in July, 1872. It is proposed in Europe to construct, or perfect by a union of lines already constructed, a continuous route of travel

by which the journey may be accom-plished from London to Bombay without change of cars; and it is estimated that the trip may be made in precisely five days, sixteen hours and forty-six minutes, though in cases of unusual detention it may be necessary to add a quarter or half an hour to this time. The contemplated route is by way of Dover Straits, through France and the Mont Cenis Tunnel by existing lines to Trieste, and thence through Austria, Turkey,

Persia and Beloochistan to Kurachee, and so on to Bombay. To complete an unbroken line of rail, it will be necessary change. to tunnel the Straits of Dover, a project which has for a long time received the attention of engineers, and which has been favorably reported on again and again by competent authorities. Recent investigations have led to the belief on the part of some engineers, that the tunnel could be opened to travel in two or three years, instead of requiring nine or ten for the work, as was at first supposed; and a similar reduction has been made in the estimate of the cost, originally set at ten million pounds ster-ling. Geologists say that the tunnel will run for the whole distance through gray chalk that can be scooped out as easily as Dutch cheese. The distance is about twenty-eight miles, The Mont Cenis Tunnel is not quite eight miles long, and was fourteen years in process of construction, costing over \$15,000,-000. The Hoosac Tunnel in Massachusetts, will be a little less than five miles long; but it is being bored through flinty granite rock, much harder than

that penetrated by the Mont Cenis excavation, and has been longer under way, though the work has not been steadily prosecuted on it. It is not im-probable that a tunnel uniting England and France may yet be carried through; but the work will probably require more time and a greater expenditure of money than the latest estimates call for.

ADULTERATION OF TOBACCO .- Salt, ugar, sal ammonia, and other substances are used in the manufacture of fancy brands of tobacco, and it is adulterate to a great extent. It is curious to obco itself, the harm arising from the fraud is not so reprehensible as when extended

to some other articles. 26

RAILBOAD BONDS .-- Whether you wish to buy or sell, write to CHARLES W. HASSLER, No. 7 Wall St., New York.

good plan of feeding them is to have a square box for each cow, large enough for her to put her nose in easily, and six inches deep Put the allowance of meal in these boxes. They may be scattered about the yard, at such a distance as will give each animal an opportunity to eat without being driven away by others. Calves will soon show, by their improved appearance and hastened growth, that oil meal is good for them also. A small handful given to them in their pasture daily will push them forward rapidly. It is well to use a small tin pan to feed them with, and a few minutes spent with. the young stock, daily, is not only an agreeable occupation, but highly profitable ; for the more regularly the owner's attention is given to the cattle, the sooner he will perceive anything wrong, and be able at once to remedy it; and a daily visit is seldom made unless there is some express purpose in it. Let the purpose then be to give them extra feed, and double benefit will result .- Ex-

Tricks of Jugglers.

Our sober Christian neighbors of the New York Observer are responsible for the following: We think Hermann and Heller are jugglers, but what can they do to compare with the Chinese tricksters? A traveller at Kinsai was entertained by the Viceroy, the Amir Kustai, and this was one of the amusements:

"That same night a juggler appeared, who was one of the great Kaan's slaves, and the Amir said to him, 'Come and show us some of your wonders.' Upon this he took a wooden ball with seven holes in it, through which long thongs were passed, and, laying hold of one of these, slung the ball into the air. It went so high that we lost sight of it altogether. (It was the hott at season of the year, and we were outside in the middle of the palace court). There now remained only the short end of a thong in the conjurer's hand, and he desired one of the boys who assisted him to lay hold of it and mount. He did so, climbing by the thong, and we lost sight of him. The conjurer then called to him three times, but getting no answer, he snatched up a knife, as if in a great rage, laid hold of the thong, and disappeared in his turn. By and by he threw down one of the boy's hands, then a foot, then the other hand and the other foot, then the trunk, and last of all, the head! Lastly, he came down himself, puffing and blowing, and with his clothes all

bloody, kissed the ground before the Amir, and said something to him in Chinese. The Amir gave some order in reply, and our friend then took the lad's limbs, laid them together in their places, and gave a kick, when, presto! was the boy, who got up and stood be-fore us. All this astonished me beyond measure."

Mrs. Barry, of the Boston Children's Mission, is said, during a year's time, to have made 1,561 visits to the poor, to have lined and trimmed one hundred hats and bonnets, to have cut out 551 garments, and to have made two visits

to another State, where she found homes for nineteen destitute children.

by sweet and tender stories, to send to T. S. ARTHUE & Sons, Philadelphia, Pa., for a spe-cimen number. The price of this beautiful Magazine is only \$1.25 a year.

OLIVER OPTIC'S MAGAZINE for Novem er is rich with good things The continued tories by Oliver Optic, Elijah Kellogg, and Sophie May, as they draw toward their close increase in interest. There is a captivating and instructive article on Fancy Work for Girls, profusely illustrated, a rattling college story, a graceful account of Psyche, a long dialogue, a stractive pigeon-hole papers, Letter Bag, a couple of pages of puzzies, a pretty song, words and music, gems of poetry, full-page illustrations, &c., &c. Published monthly by Lee & Shepard, 149 Washington street, Boston, at §2.50 per year.
