Farm, Garden and Honsehold.

An Ice House for Five Dollars,

A neighbor of mine, says a correspondent, has an inclosure of about six feet square in the clear, and six feet high. The walls are formed of old refuse timbers thrown closely together, with no regard to form or comeliness. The roof is made of hemlock boards. The entire cost of the building did not exceed five dollars, and, practically considered, it is a success; not ambitious of containing thirty-five loads of ice, but simply five loads. Two years this weeks past people coming down or little, unpretentious house has been crossing the hills have reported at variused for ice, and never yet dis-honored a draft upon its crystal de-posit. About six inches of sawdust was spread upon the ground floor, and in packing, a space of about nine inches was left between the ice and the walls of the building for sawdust, and about was left between the ice and the walls of the building for sawdust, and about nine inches of sawdust was spread upon space of eight days, and he attributed the top of the ice, and the thing was fixed. The three main principles ob- animal. served here will always insure a supply

in preserving ica.

Household Hints.

STEWING CHICKENS. - Parboil two fine chickens ; take them up in a large dish; cut them up, and separate all the jointbones one from another. Then take out the breast-bone, add a little of the water they were stewed in, a blade of mace and a pinch of salt. Cover closely with another dish, and put them in to stew until the fowls are tender. Serve hot in the same dish."

CURE FOR CROUP .- When the symptoms appear, immediately fold a towel, dip it in cold water, and apply it to the child's breast and throat ; then wrap a blanket closely around him. Or, bathe the feet well in warm water, at the same time rubbing the throat and breast with mutton tallow or goose-grease; then envelope in a warm blanket. Either of these modes will check the disease till the arrival of a physician, and in many cases will of themseles effect a cure.

Buns .--- Three cups of milk, one cup of yeast, one cup of sugar, and flour to make it sponge ; let it rise over night. then add another cup of sugar and one of butter; mold them into small biscuits.

Salt as an'Aid to Manure.

About five o'clock one fine summer's morning, I noticed that where the salt had been sown the previous day, every grain of salt had attached to itself the dew, and formed on the surface a wet spot about the size of a sixpence, the ground being generally very dry. On our light lands it consolidates them and makes them epecially firm and acceptable to the wheat plant, whose straw will stand firm and erect, although four and a half to five feet long. It is also unfavorable to certain weeds by this consideration. It prevents the ravages of the wire worm. It is especially favorable to saline plants, such as mangolds, whose ashes contain grasp, and made an effort to bite his fifty per cent. of salt. I never sow guano, except mixed with its own weight of salt. Like everything else, it has, I am sorry to say, greatly risen in price. I observe that all crops seem to thrive well on land near salt water, especially where the land is drained.

Care of Hogs.

The Colonial Farmer says: "A practical breeder gives the following advice, which, in the main, we think dashing through the brush toward the thousand times more than it has been sound, for those whose herds are not too spot where the hunter and the brute in Cuba. The fact of the matter is that large and who are engaged in mixed were tusselling on the ground. The there never would have been a rebellion

A STRUGGLE IN THE MOUNTAINS.

How a Panther Tackled an Englishman, and how the Pantner was Killed.

A correspondent sends the following very thrilling account of a desperate struggle with a mammoth catamount in the Blue Mountaine, about seven miles question

from Featherolfville, on the extreme northern edge of Albany township, to the Reading (Pa.) *Eagle* : I have just learned the particulars of an encounter recognize the independence of Cuba. had on the mountains, which has caused a great deal of talk in this section. For caus, chiefly the latter, have the great ous times having seen a large wild ani-mal, and others as having heard deep growls and strange noises at certain hours of the night. A farmer along the base of the hills, named Ezra Sensenthe loss to the incursions of this strange

served here will always insure a supply of ice, viz: good ventilation, good drainage, and plenty of sawdust. With these rules adhered to, a corner of any it is a conter of any efforts to hunt up the strange animal, efforts to hunt up the strange animal, These reports came to the cars of but to no purpose. At last he con-cluded to erganize a small hunting party. He had some one to write to Schuylkill county to two old friends of his who were also engaged in hunting, and who had likewise passed more than half their lives on the mountains. They

arrived on foot over the hills, and stopped at the cabin of Pfleger. Their names are Henry Vancolt and Thomas Anson, two Englishmen, who first came but gave up their business and took to the hills soon afterward.

The three started out on different pathways, the men having previously agreed to meet at the "big tree," a point about five miles off in the mountains. They were well armed, and determined to hunt up the mysterious animal if it were possible. Nothing happened to any of the party up to the time when Pfleger and Vancolt arrived at the tree, which was within a half hour of each other. Nothing was seen or heard of Anson. The sun had gone down behind the hills, and the forest was becoming gloomy in the dusk. Anson was making his way slowly and cantiously through a deep and tangled underbrush, and when about one hundred yards from the point of meeting,

he determined to pass up through a small ravine, whose sides were overhung with a dense undergrowth of shrubs. When directly under a small crag, and walking along with his head to the ground and his form loubled in creeping under a low vine, all of a sudden he heard a crash overhead, and the next minute he felt the claws of an animal sink in his neck and flesh, accompanied with flerce growls. By a very quick movement, Anson swung around his arms, grasped the animal by the neck with both hands, and held it in his vice-like grip. He then staggered back to the clearing, when the animal shook off the hunter's Quick as thought the man grasped a knife in his belt, and with fearful velocity swung it around and sunk it deep into the animal's side. The brute gave a long, low howl, and amidst the excitement man and beast rolled over on the ground, and as they did so the former received three severe bites in the shoulder. The growls of

Cuba and the United States. Just now the Cuban question is one

of the topics of the day, and the papers are discussing the subject with much earnestness. The Washington correearnestness. The Washington corre-spondent of the Georgetown, S. C., *Planter* takes the following view of the

The holders of Cuban bonds here are making a determined effort to embroil advantage over the Spanish Government that they can lobby, visit news-paper offices, and tell their own story, call public meetings and make speeches distribute bonds, make large promises, and influence public opinion by a thou-sand "ways that are dark and tricks that are vain," to which a government cannot resort. The Spanish minister cannot do any of these things. There are only three American citizens with whom the Government of Spain can

hold legitimate official intercourse on this important subject of the recognition of Cuba-the President of the United States, the Secretary of State, and the American Minister at Madrid. Under these circumstances, it is not strange that Congress, the press, and the people at large, whose knowledge of Cuban affairs is based exclusively on the one-sided statements of interested parties, should misunderstand the duties and the material interests of the government and people of the United States, in regard to this proposed recognition of Cuba. We have never yet had any disinterested evidence that the in-

surgents in Cuba are entitled to our respect and our sympathy, because of their purity of motive and purpose; or that they are so numerous, and powerful, and have so fair a prospect success, that nations at peace with Spain would be justified in recognizing their independence.

Only a few years ago, there were several millions of people in the United States who wished to dissolve their connection with the federal government. Among these were some of the wealthiest men, and many of the first statesmen and best military and naval offi-cers of high rank in the country. There were among the insurgents, also, many men of unblemished private character, some thousands of clergymen of all denominations, and some hundreds of thousands of active members of the various Christian churches. These millions of insurgents were backed, heart and soul, by mothers, wives and daughters; had old, strong, and stable

State governments; and organized themselves into a powerful confederacy. They equipped and sent into the field, against the United States, from which they had seceded, immense armies. They fitted out war vessels, that all but swept our commerce from the seas. For nearly five years they stood their ground. To subdue them cost us half a million of lives, and a debt of some \$2,000,000,000, which we shall probably never cancel. Yet, during all that war, we protested against the recognition, by foreign powers of the confederacy formed by these re-bellious States; and mainly upon the ground that, without such recognition, they could not succeed in achieving their independence, and that foreign

nations had no right to interfere in our domestic quarrels. And what more right have we to interfere in Cuba than Spain, and France, civil war? The carnage here was ten

Hogs thereoi, have good well water pumped for them. Have troughs made, and 246 pounds, and measured 4 feet 5 nail strips across eight inches apart, to inches long, not counting the length of keep the hogs from lying down in the water, and let the hogs be put on floors, to keep them from digging up wallow-ing holes. If any feed be given, it should be soaked in swill barrels for 12 hours before feeding-no longer-and fed to them as drink.

Everlasting Fence Posts.

I discovered, many years ago, that wood could be made to last longer than iron in the ground, but thought the process so simple and inexpensive that it was not worth while making any stir about it. I would as soon have poplar, basswood, or quaking asp as any other kind of timber for fence posts after having been set seven years, which were as sound when taken out as when they were first put in the ground. Time and weather seem to have no effect on them. The posts can be prepared This is for less than two cents apiece. the recipe : Take boiled linseed oil and stir it in pulverized charcoal to the consistency of paint. Put a coat of this over the timber, and there is not a man that will live to see it rot.

Solling Cows.

It will certainly pay to judiciously narrates: soil cows on a small farm. There is no "The other way by which so much milk can be produced on a given number of acres. When you have put your land in proper condition a cow can be kept upon one-half acre for summer, and one

acre for winter. Even better than this has been done. Starting this late, pre-a great hurrah hailed the victory. But pare the ground well, and sow oneeighth of an acre of oats thickly for time, when the gray's master was about each cow as early as you can; two or three weeks after sow the same amount of land to oats for later cutting. Then the drum, the safety-valve ceased to prepare the ground and sow one-fourth of an acre of corn for each cow. This will probably leave a surplus for winter feeding.

New Use For Petroleum,

Mr. Julius Hock, a Viennese engineer, residing in London, has invented a new method of using petroleum as a motive power. His invention does away with boiler and furnace, throwing the petroleum in minute quantities in the form of spray into the cylinder of the engine itself where it is fired or exploded, the power thus produced being transmitted by the piston moving in the cylinder. Petroleum has heretofore been employed for this purpose by three methods : first, the petroleum or hydro carbon has been mixed with the ordinary solid fuel in the furnace; second, the hydro carbon employed has been vaporised by the air, forming an "air gas" which has been conveyed to a tubular boiler and burned in pits; and, third, the liquid has been injected in the furnace in sprays by a steam injector.

When they want to find out in the started to jump at her, but his head country if a girl is courting or not, an came against her hand, and he fell old lady steps in and remarks, "I say! down. The hunters then examined it and do better where there are no branches found it to be a species of panther, and or stock ponds to wallow in. In place which was thought to be a catamount of the mammoth species. It weighed its tail, which was 2 feet 1 inch. It stood 2 feet 8 inches high, and was powerfully knit and very compactly built.

Steam vs. Horse.

On the 28th of August, 1830, some days before the opening of the Liver-pool and Manchester railroad-Mr. Cooper made his engine draw an open car, with passengers, to Ellicott's Mills, thirteen miles from Baltimore. The

return was made in fifty-seven minutes. The engine was very small. The stage proprietors did not take very kindly to the revolution in traveling, and met the engine at the Relay House, on its return-a gray horse, of great beauty and power, being harnessed to another car on the second track ; for Mr. Scharf says, "the company had begun to make two tracks to the mills," Then a race took place. At Then a race took place. At first the gallant gray had the best of it, for his steam was up and on, while the engine had to wait until the rotation of the wheels set the blower to work. Soon, when this was done, it became a

well-contested race. As Mr. Scharf "The blower whistled; the steam "The blower whistled; the steam they offer us is 75 cents. Don't work blew off in vapory clouds; the pace in- for less than \$1.50." creased; the passengers should; the engine gained on the horse; soon it lapped him; the silk was plied; the race was neck-and-neck, nose-and-nose : was not repeated, for just at this giving up, the band driving the pulley, which drove the blower, slipped from break scream, and the engine, for want of breath, began to wheeze and pant. In

vain Mr. Cooper (who was his own engine-man and fireman) lacerated his hands in attempting to replace the band upon the wheel-in vain he tried to urge the fire with light wood. The horse gained on the machine, and passed it ; and although the band was presently replaced and steam again did its best, the horse was too far ahead to be overtaken, and came in the winner of the race.'

An Ingenious Defence.

An Ingenious Defence, In the Police court at Chicago, a few days ago, a wife thus ingeniously ex-plained away serious charges of harsh inght and if I win \$500 I will the horse.' treatment of her poor husband : One The original name of the game of cards day, when she was running across the 'Boston' was, it appears, 'boasting, which was contracted into 'Boston.' ed in the way and struck his wrist The game was played, the money won, against the fork, wrenching it from her and the horse purchased with the wingrup by the prongs, which he ran into his wrist. Then he endeavored to strike her, but she held up a pan of hot dish-water between them, and he spill-ed it all over his head. Then he got till more sparse at the spill-ed it all over his head. How He Got His Horse,

The origin of the once famous racing horse Boston is thus described by a correspondent : "This celebrated racer, the good fortune to win the most dis-

tinguished consideration of John Ran-dolph. A Kentucky gentleman visiting the Virginia owner of the great racer which it is impossible to doubt. Among before the latter had earned for himself a name greatly admired him, and

-Boston."

Manassas Kelly, of Missouri, worked hard for a year, and raised twelve hundred bushels of wheat, which he stacked. Then he ploughed the ground around

getting off the car, an intoxicated negro was

sitting on the step obstructing the passage. Capt. Butler pushed the negro with his hand, telling him to get up. Gabriel and Michael Muller, both negroes, were together, one sitting on the steps and the other standing on the platform of the car. Michael pushed Mrs. Butler, bock as the was in the act of heing Butler back as she was in the act of being assisted out, and Gabriel pulled out a pisto and shot Capt. Butler over the left temple, the after these small jobs are finished no one will be allowed to work for less than \$1.50 per day. No serious disturbance is enticipated a body of policemen from jail by a mob and shot,

Winning Golden Opinions.

Perhaps no man living has won more golden opinions than Dr. Walker, as the enormous and widely increasing sale of his CALIFORNIA VINEGAR BITTERS atsize of the King of the Turf and grand-size of more celebrities in horseflesh exchanges, but there is a panegyric of exchanges, but there is a panegyric of than any one cares to name, was owned the Bitters staring us in the face. Our in Virginia in his early days, and has readers will say that there must be a reason for all this praise. They are the thousands who have borne testimony to its excellence, there is not one

dissentient voice. In very many phases of inorganic disease it seems to be unfailing. All diseases arising from a vi-tiated state of the blood are surely eradicated by it. It is an effectua remedy for pulmonary complaints, bil-ious, remittent and intermittent fevers, rheumatism and dyspepsia. It purges the body of all unhealthy humors, gives

fered with by the presence of alcohol The VINEGAR BITTERS is perfectly free from any such hurtful ingredient. We have always believed that plants con-tain the true remedies for disease, and all the remedies necessary. Dr. Walker is on the line of real progress, and we hope that he will not rest on his

present discoveries. - Com.

A WONDER TO HERSELF.

TANETOWN, Delaware Co., O., March 20, 1873

TANKTOWS, DERWARG Co., O., MARCH 20, 1873 To Dr. R. V. PIERCE : Your Discovery needs only a fair trial, and it will do all you recom-mend it to do, and more too. When I was 15 I caught cold, and for 28 years I have been a perfect wreck of disease, and all the medicines and doctors' bills have run up at times to \$200 and \$300, and never any better, but worse, when I gave up all hopes last spring of living the summer through. I received one of your Account Books, and told my husband, after reading it, that it was too late to try further, but reading it, that it was too late to try further, bu

he said it was never too late. He went and bought two bottles, and I found it was helping me very much. Since 1841 I was troubled with Catarrh and Sore Throat, and was almost with Catarrh and Sore Throat, and was almost entirely deaf in one ear, and my voice was dull as could be. There was constant pain in my head. Now my head is as sound as a dollar, my voice is clear, and I have used ten bottles of your Discovery. It has cured me of Catarrh, Sore Throat, Heart Disease, Spine Affection, and Torpid Liver. My liver was very bad. My skin was rough. When I put my hand on my body it was like fish scales. Now it is smooth and soft as a child's. In conclusion, I will say I have been well for three months. I

will say I have been well for three months. I am a wonder to myself and friends. This is but an imperfect statement ; half has not been told. Yours with respect. HESTER LACKEY.
