It is finally decided that Wdictionary is the best.

What sort of hard things can you throw at a dog without hurting him? Words English physicians say that melan-

cholia is always active in the morning and wears away towards night. * Henry C. Work, the song writer, has already received over \$4,000 royalty for the song, "Grandfather's Clock." Man can do many things, but there is

one thing he can't do; he can't button on a new collar, just after cutting his thumb-nails, without looking up in the air.

After a man, upon some raw and gusty night, when everything is as dark as the shadow of fate, has run across a swaying clothes-line with his chin and the salts, as potatoes, turnips and all roots.

ant .- Hawkeye. There was an instance of the disagree ment of doctors in France recently which led to a duel in the Bois de Vincennes. The participants were army surgeons, who had had a dispute. One of them was wounded, and his antagonist dressed the wound and helped him to the carriage, and subsequently committed sui

During 1878 the American and English societies distributed 3,850,376 Bibles,viz.: in Russia, 740,823 in 69 languages; in Turkey, 64,508 in 9 languages; India, 343,-616: China, 159,103; Japan, 61,398; Italy, 52,828; France, 133,160; Servia and Roumania, 128,170; Spain, 68,393; Austria, 274,362; Germany, 468,108; South America, 35,348; Mexico, 30,000.

In the Russian Empire there are alto-gether only about fifteen hundred regu-larly licensed physicians, or one physi-cian to each fifty thousand people, while in the United States there is one physician to each five hundred inhabi-tants. The Russian Government is not loing anything to advance medical edu-There are but eight Russian medical colleges, and the students are required to prosecute their professional studies for five years; and such persons only are admitted to these colleges as have successfully undergone an examina-tion in some one of the literary colleges, which have a seven years' course.

The Desert Pirates.

On the 14th of March, 1878, Mr. Grattan Geary left Bombay for the Persian gulf, with the intention of traversing the sultan's dominions, and learning for himself the actual condition of affairs resulting from the Turkish system of government, complicated by the with-drawal of Turkish garrisons from Asia Minor and the defeat of the Turkish armies in Europe. Traveling by him self, and over routes seldom traversed except by large parties well protected he saw and conversed with people of various races and ranks. The chief dangers to which he was exposed were the plundering Arabs and Kurds, whom the absence of the regular troops embold-ened to rob and terrorize all the country

outside the principal towns.

At Muscat, the capital of Oman, in Arabia, he found a city with streets so narrow that no four-footed animasi larger than cats or dogs could pass through them, notwithstanding that the place lms 40,000 inhabitants and a considerable trade. The bazaars are cov-ered over, and are thronged with Beered over, and are thronged with Bedouins fresh from the desert. All were armed to the teeth. A favorite weapon is a straight, two-handed sword, the sweep of which would take off a man's thigh. The swordsman carried over their shoulders small, round shields of rhinoceros hide. Half a century ago a small number of the "Beni Bou Ali" were atsacked by an English officer and 350 troops, when the Bedouins rushed mon their assailants, and cut down 200 o them in the twinkle of an eye. This loc to a large expedition being sent from Bombay, which succeeded in defeating the swordsmen. The British resident at Muscat has a finger very often in loca insurrections, and summons a warship now and then to the aid of the immun. or governor. Not many years ago th gunboat Teaser fired over the town at crowd of Bedouins who had taken position on the hills near the city, wit the intention of sacking it. The Aral the intention of sacking it. The Arabsaid the shells had eyes, and could see where to fall, since they were out of view of the ship behind the hills. A shell fell in a field and did not explode, whereupon it was surrounded by the Bedouins, one of whom struck its pertermined to put out its "eye," the ey by which it had seen its way to the position. Eleven of their tribe paid it penalty for this singular piece of vindic siyeness. Two forts, called Jalali or the Glorious, and Mirani, the name of Biluchee governor, protect the roadstead. At times these forts are on bad terms, and blaze away at each other across th harbor and in front of the town, to the great detriment of business. Fort Jalali not long ago fired on the town promiseuously until brought to reason by an English gunboat, Oman means security

or settled peace.

Mr. Geary's adventures and observa-tions have been issued in book-form un-der the title "Through Asiatic Turkey."

History on Bark. A short time ago a discovery of several mounds, evidently artificially constructed and not the handiwork of nature, was made at what is known as Sheridan's drive, on a range of hills immediately to the west of Fort Leavenworth, Kan. Within these mounds were traces of stonework as artistic and nearly perfect as that of the present day. A party went to the mounds and found a sort of book of records, written, or transcribed rather, upon pieces of bark, and placed together like the leaves of a book and tied with smaller pieces of bark. Among the exploring party was a gentleman from Boston, who had made the language of Mexico a study, and who, upon examination of the records found in the mounds, found a similarity between the writings in the records and the ancient language of Mexico during the time of the Monte-

The record is a history-a chronicle of

events. No dates are given, but from historical analogy it is to be inferred that it must have been about 1420, during the reign of the Montezumas in Mexico, when the emperors of that name had it all their own way in not only their own section of the country, but up toward our West as well. The records give the de-tails of a great battle, probably on the very spot where the metropolis of Kannow stands. According to the records, the battle raged for three days and the ground was strewn with slain, and the conflict was over the victors. with the prisoners they had taken, reversed their steps and went back to Mexico, where the captives were to be offered up upon the altars as a sacrifice to their god of war. The records were evidently written by the victors, and placed by them in the mounds where they were found. The records consist of ten large pieces of bark, flattened out, about ten or twelve inches in size, and bound tight together by thongs of bark cut into long strips and pressed. They have been sent to Boston, and are to be placed in the State Historical Museum there.—Potter's Monthly.

weeks earlier than that ripened on the spot. The reason is that the seed raised in the north has adapted itself to a short season. This is true, in a measure, of all seeds.

FARM, GARDEN, AND HOUSEHOLD.

When and Where to Apply Wood Ashes The agricultural editor of the New York World says: Wood ashes, among the best of saline manures and also among the most economical, are coming to be more and more appreciated every year. Farmers now, as a rule, husband every pound made on the farm and buy them whenever they can be procured at a rea-sonable rate. The time has gone by for exchanging ashes from good hard wood

for a few pounds of soap.

Leached ashes, while less valuable. contain all the elements of the unleached, having been deprived only of a part of their potash and soda. Ashes benefit all soils not already rich in the principles they contain, and may be drilled in with roots and grain, sown broadcast on meadows or pastures, or mixed with the

neck, you never can convince him that clover, lucern, peas, beans and the there is any truth in all this nonsense grasses, are benefited by ashes. The about death by hanging being so pleascation of ashes with bone-dust, and their effects are also strengthened when mixed with gypsum. Light soils call for light dressings, say from ten to fourteen bushels of unleached and twice that quantity of leached ashes per acre. Rich lands or clays bear heavier dressings. Repeated dressings of ashes like repeated dressings of lime or gypsum, without a orresponding addition of vegetable or barnyard manures are not admissable for they will eventually exhaust lands when applied alone. Where the entire surface of the soil is covered with vegetable growth either of the three materials mentioned acts with great effect. For this reason ashes may be applied un-mixed with other fertilizers to meadow lands for a longer time than to any other

In reply to questions asked at the El-mira (N. Y.) Farmers' club in regard to the value of leached askes and the best manner of applying them to general crops, as corn, wheat and oats, the following information was gained: Lenched ashes vary so much in their character that no precise estimate of their value can be made. Heavy clay is liable to be in-juriously compacted by liberal dressings of ashes, leached or unleached, unless the land is sod, in which case ashes spread on the surface tend to increase the crop of grass. The safest and best use of ched ashes on most kinds of soil spreading them on old meadow old pasture. Working them

or old pasture. Working them into land on which potatoes are to be planted in the same season is also a good way to use them. Good ashes make a valuable dressing for wheat land and for corn, but the leached ashes are too un-certain in their character to recommend for such use. Coal ashes are inferior in quality to

hose from wood and vegetables, but are revertheless of value and are to be ap died to the soil in a similar manner, as they tend with their abundance of cin-ders to the mechanical division of soils. loal ashes are beneficial to heavy rather than light soils.

Farmers, in consideration of the above facts, cannot be too strongly encouraged to follow the practice of collecting and reducing to ashes all the rubbish of the farm not otherwise available, such as old wood, sods, rags-in fact everything which cumbers the place as useless matter. Burnt earth is not only a manure in itself, but is most useful to mix with artificial fertilizers which cannot be easily distributed alone or too strong to sow among seed unmixed with other material.

Remarkable Array of New Fruits. The year 1878, it appears, has been rendered memorable to American pomo-logists by reason of the large number of new native fruits which were originated or introduced during that time. The list of peaches especially has been greatly in-creased. In a paper read before the Western New York Horticultural Society by William C. Barry descriptions of thirty peach seedlings never before described were enumerated as having come to the notice of this well-known nurseryman, while many more were fruited which are not yet made known to the public. According to Mr. Barry the public. According to Mr. Barry the State of New York offers several candi-dates for popular favor. From the great dates for popular favor, new varieties metropolis even come two new varieties which apparently possess many valuable qualities. In Western New York there are several seedlings which will undoubtedly prove desirable. One of them is believed to be the largest and carliest of all the very early peaches. Several excellent early and late varieties have originated in Ohio. Passing over a vast extent of country are found a number of new kinds in Missouri, Kanas and Nebraska. From Kansas comes the information that the whole list of arly peaches known to the public, so far as fruited in Kansas in 1878, is sur-passed both in earliness and size by at least fifty new seedlings of Kansas origin, many of which bore their first fruit that year. At the South, too, many promis-ing new sorts are mentioned. Thus, as if by magic, during the same year and in various sections of country new peaches have sprung up in such numbers as to astonish and almost perplex the fruit culturist.

Touching upon the few new apples

brought to notice the past year, Mr. Barry had a word to say about the Russian apples which have caused more or less discussion. Of the varieties under trial for some time several have given evidence of value, and while they can hardly be compared in quality to our best apples, still they are fair and will doubtless prove desirable in those localities where only hardy varieties succeed.

What portion of the large number of

new strawberries introduced are worthy of cultivation Mr. Barry thought it difficult as yet to say. Another season's ex-perience will be required before definite and reliable information can be given concerning many of them. Of a number which have been well tested the Sharpless is given a prominent place, as are the Cumberland, Triumph and Crescent seedling. Among new raspberries the Gregg was pronounced a decided improvement on the older varieties of black

caps .- New York World.

Early Corn. A correspondent of Vick's Magazine gives the following directions for bringing corn to maturity early in the season, adding that he picked corn last year inside of sixty days from the time of plant-ing: "Let the conditions of the soil and manure be the best you can command, and aside from the frequent weeding and hoeing, stirring the ground thoroughly, thin the stalks to three or four-three is best if you would have the largest ears and most of them. Pluck out most un-mercifully every sucker and non-bearing stalk—that process alone will hasten your corn a week or ten days, as I have come to believe from experiment. I have added this year a top-dressing at the hill, when the corn was well up—a compost of one part plaster, two parts ashes, and two parts fine manure, which, I think, has been a great advantage."

Those who wish early corn should not

only have for seed what is called "an early kind," but they should obtain it from as for north as possible. Sled corn raised in Canada and taken south will come to perfection one, two or three weeks earlier than that ripened on the spot. The reason is that the seed raised-

Buford's Career.

The Cincinnati Enquirer devotes an article to Henry Buford, the Kentuckian who shot and killed Judge J. M. Elliott. of the Kentucky Court of Appeals, in the streets of Frankfort. The Enquirer says: Buford's history shows him to be a man utterly regardless of law, of his own life or that of others, when his passions are aroused. Somewhere in the '50s Buford was the hero of an affray on the Lexington fair grounds, which had a great deal of notoriety at the time. He and a gentleman named Thomas, of Mt. Sterling, had quarreled, and, meeting on the fair grounds, immediately opened fire on each other. Buford displayed character-istic coolness and recklessness, changing his position once while Thomas was firing, to avoid shooting in the direction of some ladies, and at another time de-liberately taking a pin from the lapel of his coat and picking the tube of his pis-tol, which had failed to go off. He wounded Thomas, and escaped unburt himself. A gentleman of Lexington named Ferguson was keeping Thomas supplied with pistols. Gen. Abe Buford made at him with a bowie-knife and slashed at his throat. Ferguson ducked his head and the knife shaved his beard, taking off a good-sized piece of his chin, which fell into the posses-sion of Mr. Mulligan, of Lexington, who exhibited it for some time in his store

window as a curiosity.

Another incident in Buford's career imported at the time when the three colonels were editing the *Times*, in Louisville. Buford sent a noted belle in that city a bucket of sausage from his home near Versailles. Theodore O'Hara, author of the famous "Bivouac of the Dead," one of the three colonels, made the present a subject of ridicule in his paper. As soon as the paper reached Versailles, Buford, taking a friend with him, got in his buggy, and by driving capidly and taking fresh horses from time to time arrived in Louisville early in the night. Reaching the Galt House and going in, he found O'Hara at the bar taking a drink. Stepping up to him and inquiring as to his authorship, O'Hara acknowledged it, and Buford at once struck him. They struggled, clinched and foll, O'Hara underneath. O'Hara drew a pistol, and reaching around Buford, tried to shoot him; but his sense of himor prevailing over his wrath, he got to laughing so that he could not discharge it. They were separated before any damage was done beyond a good beating for O'Hara, and Buford returned home.

Still another, attended with worse results, was his assault on Mr. Ulysses Turner, of Woodford, a brilliant young awyer, and at one time a member of the lawyer, and at one time a member of the banking firm of Saylor, Shelby & Co., of Lexington. Buford had some busi-ness controversy with him, attacked him, and beat him so brutally about the head that his life was despaired of, his health wrecked and his sight permanent-ly destroyed. Mr. Turner died a short ago, after years of suffering and

Buford's last violent exploit before the present murder was his defiance of the authority of the sheriff of Henry county in the earlier stages of the suit, the final decision of which was the cause of the

The Soup Stone.

A lady in the outskirts of Denver wa the victim the other day of a tramp's practical joke. Even in these vagabonds there is an occasional vein of humor which is worth preserving. The inci-dent happened in this wise: About the middle of the afternoon a tramp put in an appearance and asked politely if he could be permitted to cook for himself: plate of soup.
"I have the ingredients with me," he

said, displaying a cobblestone about the size of an apple.

The lady very naturally looked at him in surprise. You can't make soup out of that rock, can you?" she inquired.
"Oh, yes, madam. This is what we

Well, I should like to see you do it: and she forthwith made up a fire in the stove and the tramp commenced opera-tions. He filled the stove pan with

water, and after it commenced to boil, very carefully deposited the stone in a pan in the water. "I shall have to trouble, you for a little seasoning," he said, and the lady hastened to get him an onion, a piece of meat and a pomato. These were care-fully cut up and put in to boil along with the stone. In a short time a delicious plate of soup was prepared. The lady tasted it and was delighted with the flavor. The fellow sat down and ate, and his hostess immediately added what was necessary to make a substantial meal. When he left he said he could get plenty of soup stones on his waya, nd ie would leave that one with her as an evidence of how sincerely he appreciated her kindness. She was firmly convinced that she had come into possession of a treasure. That night she told her hustreasure. That night she told her husband of the circumstance. He listened to the recital and then inquired inno-

Don't you think the meat and the onion and the tomato would have made a very good soup without the rock? Gradually the trick began to dawn upon her, and if you want to make that lady mad, you have only to ask her for the loan of her soup stone .- Rocky Mountain News.

The Milky Way.

The milky way forms the grandest feature of the firmament. It completely encircles the whole fabric of the skies, and sends its light down upon us, according to the best observations, from no less than 18,000,000 of suns. These are planted at various distances, too remote to be more than little understood; but their light, the medium of measurement, re quires for its transit to our earth periods ranging from ten to 1,000 years. Such is the sum of the great truths revealed to us by the two Herschels, who, with a zeal which no obstacle could daunt, have explored every part of the prodigious circle. Sir William Herschel, after accomplishing his famous section, believed that he had gauged the milky way to its lowest depths, affirming that he could follow a cluster of stars with his telescope, constructed expressly for the investigation, as far back as would require 330,000 years for the transit of light. But, presumptuous as it may seem, we must be per-mitted to doubt this assertion, as the same telescope in the same masterhand was not sufficiently powerful to resolve even the nebulæ in Orion. Nor must we forget that light, our only clew to those unsearchable regions, expands and de-composes in its progress, and, coming from a point so remote, its radiant waves could be dispersed in space. Thus the reflection is forced upon us that new clusters and systems, whose beaming light will never reach our earth, still throng beyond, and that, though it is permitted to man to behold the immensity he shall never see the bounds of crea-

Arthur Gilman tells the following of an old lady at Concord: "Have you given electricity a trial for your complaint, madame?" asked the minister, as he took tea with the old lady. "Electricity!" said she. "Well, yes, I reckon it has. I was struck by lightning last summer and hove out the window, but it didn't seem to do me no sort of good .- Boston

Drawing from nature is contagious, that is to say it's sketching.

FOR THE FAIR SEX.

The Dresses at the Royal Wedding. Our lady readers will thank us for giv-ing them the following full, true and particular account of the costumes worn at the late royal wedding at Windsor by some of the most distinguished dames and damsels of the British court:

Her royal highness, the Princess Wales, wore her exquisite toilette of Oriental pearl-colored brocade, richly embroidered in pearls, with ruffles of point d'Angleterre and narrow hands of sable. The train was composed of the darkest amethyst velvet, lined with rich-est Oriental peorl satin, bordered in narrow sable; a smaller train of matchles row sable; a smaller than or machines point d'Angleterre entirely covering the center, was fastened on by large me-dallions of pearls. The corsage was pro-fusely studded with pearls and diamonds. ther royal highness wore a tiara of diamonds, white ostrich feathers and a long ulle veil, and necklace of rows of pearls

Their royal highnesses, the Princesses Louise, Victoria and Maud of Wales, were attired in dresses of Oriental pearl-colored brocade, with stomachers of Malines lace and ceintures of darkest ame thyst velvet, over jupes of poult-de-soie of the same tint, with small volants of Malines lace.

The dress worn by her royal highness, the Duchess of Teck, was one of real magnificence. The corsage and jupe were of the palest primrose and olive brocade, with plisses and draperies of olive satin, festooned with volants of the finest Honiton lace; the train of the richest olive yelvet, lined and bordered in rmine, was fixed on one shoulder, with diamond clasps, and diamond stomacher on corsage. Her royal highness also wore a tiara of diamonds, lappets, ostrich feathers and diamond necklace. The Duchess of Sutherland wore a

magnificent dress of gold and silver bro-cade, mixed with a new shade of Scabi-ence velvet, and finest point de Venise. The corsage was trimmed with matchless ubies and diamonds, which blended beautifully with the new shade of velvet. Her grace were a tiara of diamonds, white ostrich features and gold and silver veil.

The Marchioness of Salisbury wore a most picturesque dress of antique Louis XV. brocade, of a very pale reseda hue, with embossed wreaths and bouquets of myosotis and leaves; the jupe was com-posed of the darkestreseds velvet draped in brocade, with festoons of myosotis satin. The corsage was of velvet, with a Louis XV. waistcoat of brocade and beautiful diamond ornaments; the headdress a tiara of diamonds, white plumes and veil.
The Marchioness of Conyngham wore a

lovely toilette of matter satin and costly antique lace, the skirt strewed with branches of natural mauve and white lilacs. Her ladyship also were a tiara of diamonds, white feathers with veil, and branches of lilacs.
The Viscountess Cranbrook wore

dress of Russian gray satin duchesse, draped with guipure lace and velvet of the same rich shade. Headdress, diamonds, plumes and lappets.

What Iowa Girls are Taught At the Iowa Agricultural College every girl in the junior class has learned how to make good bread, weighing and

measuring their ingredients, mixing, kneading and baking, and regulating her fire. Each has also been taught to make yeast and bake biscrit, puddings, pies and cake of various kinds; how to cook a roast, broil a steak and make a fragrant cup of coffee; how to stuff and roast a turkey, make oyster soup, prepare stock for other soups, steam and mash potatoes so that they will melt in the mouth, and, in short, to get up a first-class meal, com-bining both substantial and fancy dishes. in good style. Theory and manual skill have gone hand in land. Vast stores of learning have beer accumulated in the arts of canning, preserving and pickling fruits, and they have taken practical lessons in all the details of household management, such as house-furnishing, care of beds and bedding, washing and ironing, care of the sick, care of children, etc. The girls, we are informed, are also thoroughly grounded in science, mathematics and English literature; but this is of siight moment compared with the oregoing catalogue of virtues. If there is anything that challenges the unlimited respect and devotion of the masculine mind it is ability in woman to order well her own household. Each one of these charming Iowa girls, it is safe to say, will marry within six weeks after graduation.—St. Paul Pioneer Press.

Automatic Machinery.

An extraordinary statement in regard o the introduction of automatic machinery into some factories not far from Low Moor, near Bradford, England, has appeared in the Warchouseman and Drap-ers' Trade Journal. The writer says "We have visited the Oak mills by night, in company with Mr. Burns and a friend. The building itself was in darkness, but we could hear the rumble of machinery as we approached. The door was un-locked and couple of candles were light-ed. By the dim light we saw the mahines all at work, and passing from one to another we noted also what they were producing. There was no possibility of deception, and no room for doubt. We were not there to examine the construct tion of the machinery; it was sufficient to be able to verify the main fact—which is that when the working hours of the mills are over, the lights are put out, the building is locked up and the machines are left working all through the night, producing large quantities of beautiful articles in great variety of patterns in silk, cotton and wool." The method by which this result has been attained remains a secret. The only night attendant at the factory appears to be an engineer, inasmuch as the engine and boiler cannot be left to themselves.

Food III Digested Imperfectly nourishes the system, since it is only partially assimilated by the blood. Pale, baggard mortals, with dyspeptic stomaclis, imoverished circulation and weak nerves, experience a marked and rapid improvement in their physical condition by availing themselves of that sure resource of the sick and debilitated, Hostetter's Stomach Bitters. This genial tonic and alterative lends an impetus to the processes of digestion which insures an adequate development of the materials of blood, fiber and muscu lar tissue. Moreover, it soothes and strengthens overwrought or weak nerves, counteracts a tendency to hypochondria or despondency, to which dyspeptic and bilious persons are pec-liarly liable, and is an agreeable and wholeson

stitutions, are greatly relieved by it; and it is a

reliable preventive of, and remedy for, malarial levers. A Word to Doubters.

There is a good old English maxim that teaches us to "believe every man honest until we know him to be a villain." American custom seems to have reversed this law and ap-pears to make every man a villain until he has tom seems to have reversed this law and appears to make every man a villain until he has proved himself an honest man. As with people, so with things. Every article placed in our markets can lay claim to popular favor upon intrinsic merit and value alone. Continued popularity, therefore, is proof positive of intrinsic excellence. Dr. Pierce's Family Remedies are far more popular to-day than ever before. The people have tested them and know them to be genuine remedies for the diseases they are recommended to cure. The Golden Medical Discovery and Purgative Pellets are the best alterative, tonic and cathartic remedies that can be used in chronic diseases of the stomach and liver. The world-wide popularity of the Favorite Prescription, as a never-failing remedy for female diseases, would have alone secured to its discoverer the fame he has so richly won. Dr. Sage's Catarrh Remedy, of which Dr. Pierce is also proprietor, is recommended by those who have tested its virtues as a safe and reliable remedy for catarrh in its worst forms. in its worst forms.

A Useful Dog.

A well-dressed young woman entered a restaurant not far from the terminus of the New Orleans railway, and told the waiter to bring her in all laste a basin of soup, as she was about to take her departure by the next train. This was immediately done, and after having taken it and paying the waiter she was hurrying away, saying that she should certainly be late, when she perceived her passage barred by a large dog, which refused to let her pass. She attempted by caresses to put it saids but the anirestaurant not far from the terminus

refused to let her pass. She attempted by caresses to put it aside, but the animal held firm and opposed her way.

"I shall certainly be late!" she cried.
"Do take away that horrible dog."
The waiter and the master cried out,
"Vidocq, Vidocq, give way, sir!"
But the dog never stirred. One of the waiters here whispered something to the master, who, coming up to the young

woman said:

"If my dog prevents you from leaving
the premises the reason must be that you
have some of the property belonging to
the house about you. You had better give it up at once and go your way."

The person thus addressed at first af The person thus addressed at hist affected great indignation at being so accused, but at last drew out a silver spoon, which she handed to the owner of the restaurant. The dog then allowed her to past, and she was hurrying off when she was seized by her mante et and forced track forced to the force of the restaurant. and forced to stop. This time it was a police agent, who had been on the look-out for several persons suspected of being concerned in a robbery, and who it was thought might attempt to get off by the milway. She was arrested, and on ex unination her mantelet was found to b furnished with immense pockets for re-ceiving pilfered goods. It is said that this is not the first time that the dog belonging to the restaurateur has shown himself a faithful guardian of his master's property.

Dr. R. V. Pierce, having acquired a reputa-ion in the treatment of chronic diseases resulting in a professional business far exceeding his individual ability to conduct, some years ago individual ability to conduct, some years ago induced several medical gentlemen to associate themselves with him, as the faculty of the World's dispensary, the consulting department of which has since been merged with the Invalids hotel. The organization has been completed and incorporated under statute enacted by the legislature of the State of New York, under the name and style of the "World's Dispensary Medical Association."

We clip the following from the Buffalo Express:

Express: A branch of the "World's Dispensary Medical Association" is to be established in London, Eng., a step which the continually increasing European business of the Dispensary has beer tound to warrant, and next week Dr. B. T. Bedortha will sail for the great metropolis named, to superintend the organization of the new institution. This gentleman has been for some four years associated with Dr. Pierce in a position of responsibility, and is well qualified for the duty now entrusted to him. Heretofore the foreign business of the World's Discussion has been transcripted beyond the property. pensary has been transacted through the agency of prominent druggists, but it has as named such proportions as to require more di-ect care. Dr. Bedortha will no doubt success ally carry out his mission, being a gentlema excellent business abilities and
