COLLEGE of NEW-JERSEY.

ADVERTISEMENT. THE Grammar School formerly attached to this College, having gradually declined through the increasing infirmities of the late President for some time before his death, it is proposed by the subscriber immediately to revive it, and to put it under the most careful instruction and government. The Latin, Greek, and French Languages shall be taught in it, together with the principles of English Grammar, of Geography, and practical Geometry. Parents, likewise, who do not chuse that their children should go through the intire course of studies in the College, may now have them instructed in any particular branches in the same manner, on the same terms, and to the same extent as in the College—particularly in the antiquities and mythology of Rome, in Geography, in the Mathematics, in Natural Philosophy and Astronomy, in Moral Philosophy and the Principles of Civil Government, in Eloquence, and in the Elements of History. They may address their children to any of the Masters in the College, or to SAMUEL S. SMITH.

JAMES M'ALPIN, TAYLOR.

RETURNS his grateful acknowledgments to his Friends and the Public for their liberal encouragement, and begs leave to solicit a continuance of their favors. At his Shop gentlemen may be furnished with the best materials, and have them made up and finished in the most satisfactory manner. He will thankfully receive any orders and pay a prompt and punctual attention to them.

A Meeting of the Stockholders

in the Insurance Company of the State of Pennsylvania, on the 25th May last, convened for the purpose of fixing the time of payment of the remaining part of the Capital Stock of said Company. Resolved, that the remaining sum of two hundred dollars per share, be paid on the 6th day of November next, under the penalties annexed to default by the act of Incorporation.

To be sold at Private Sale.

TWO new three story brick houses, neatly finished; one on the fourth side of Filbert, above ninth street; each house has the privilege of a three feet alley, and the lots run back to a 30 feet wide street. Also, a large three story brick building, thirty six and a half feet front, on the fourth side of Filbert, above Eighth street. This lot extends 120 feet in depth and has the privilege of a nine feet alley from Filbert street the whole length of the lot, and of a 30 feet square court for carriage to turn in. This last building is not finished in the inside, and may be made either into one or two houses—it will answer for any large manufactory. The whole clear of ground rent or any incumbrance. For terms apply at No. 111 Chestnut street.

Scheme of a Lottery.

[The rapid sale of the first edition of this entertaining novel, in a few months is the best criterion of its merit.]

EXTRACT FROM THE CRITICAL REVIEW, APRIL 1791, p. 468. "It may be a tale of truth, for it is not unnatural, and it is a tale of real distress—Charlotte, by the artifice of a teacher, recommended to a school, from humanity rather than a conviction of her integrity, or the regularity of her former conduct, is enticed from her governess, and accompanies a young officer to America—the marriage ceremony, if not forgotten, is postponed, and Charlotte dies a martyr to the inconstancy of her lover and treachery of his friend.

The situations are artless and affecting—the description natural and pathetic; we should feel for Charlotte if such a person ever existed, who for one error, scarcely, perhaps deserved so severe a punishment. If it is a fiction, poetic justice is not, we think, properly distributed."

TREASURY DEPARTMENT, Revenue Office, April 27, 1795

PROPOSALS will be received at the Office of the Commissioner of the Revenue for building

A LIGHT HOUSE

on the head land of Cape Hatteras on the coast of North Carolina, of the following materials, dimensions, and description. The form is to be octagonal—the foundation is to be of stone, to be sunk thirteen feet below the bottom of the water table or the surface of the earth, and to be commenced of the diameter of twenty nine feet.—From such commencement to the height of four feet the foundation is to be laid solidly and from thence to the bottom of the water table, the foundation wall is to be nine feet high and nine feet thick.

The diameter of the base from the bottom of the water table to the top thereof (where the octagonal pyramid is to commence) is to be twenty eight feet four inches and the wall is there to be seven feet thick—the wall of the octagonal pyramid is to be six feet thick at the base thereof, on the top of the water table.

The height of the building from the bottom of the water-table, and from the surface of the earth, is to be ninety feet to the top of the stone work, under the floor of the lantern; where the diameter is to be sixteen and one half feet and the wall three feet—the whole of the walls is to be built of stone: the water table is to be cap with sawed floors at least eight inches wide and flopped at the top to turn off the water. The outside of the walls is to be faced with hewn or hammer dressed stone, having four windows in the north east and five windows in the fourth west; The sashes are to be hung with hinges, and each sash is to have twelve panes of glass, eight by ten inches.

On the top of the stone work is to be a framed tier of joists, bedded therein, planked over with oak plank, extending two feet beyond the wall thereby forming an eave which is to be finished with a cornice, the whole having a descent from the centre sufficient to throw off the water, and to be covered with copper. A complete and sufficient iron lantern in the octagonal form is to rest thereon. The eight corner pieces or stanchions of which, are to be built in the wall to the depth of ten feet. These stanchions to be nearly three inches square in the lower ten feet, and 3 1/2 inches by 2 1/2 inches above. The lantern is to be ten feet and nine inches in diameter, it is also to be ten feet high from the floor to the bottom of the dome or roof and to have a dome or roof of five feet and nine inches in height. The whole space between the posts or upright pieces at the angles is to be occupied by the sashes, which are to be moulded on the inside and struck solid. Each sash is to have twenty eight panes of glass, fourteen by twelve inches. A part of the sash on the fourth west side is to be hung with hinges for a convenient door to go out on the platform. The rafters of the lantern are to be framed into an iron hoop, over which is to be a copper funnel, thro' which the smoke may pass into a large copper ventilator in the form of a man's head, capable of containing one hundred gallons.

This head is to be turned by a large vane; so that the hole for venting the smoke, may be always to leeward. Eight dormant ventilators are to be fixed in the roof, a large curved air pipe is to be passed through the floor, and a close stove is to be provided and fixed in the lantern. There are to be eight pairs of stairs to ascend to the lantern, the entrance to which is to be by a trap door covered with copper. The building is to be furnished with two complete electrical conductors, or rods with points. The floors are to be laid with plank, or at least one inch and one half in thickness. The entrance to the light house is to be well secured by a strong door hung upon hinges with a strong Lock and latch complete.

Also a frame House to be thirty four feet in front and sixteen feet deep with a cellar under it. The cellar walls to be eighteen inches thick and seven feet high. The first story of the house is to be eight feet, and the second, seven feet and six inches high. The floors are to be laid in whole lengths, nailed through. The track of chimneys is to be finished with two plain fire pipes on each floor, one of them large for a kitchen. Two windows below and three above in front and rear, each sash to have eighteen panes of glass ten by twelve inches. The doors are to be hung and furnished completely.

The ceilings and sides of the House are to be plastered with two coats; all the wood work inside and out is to be well painted and the whole to be finished in a plain decent manner.

An Oil vault is to be built twenty feet by twelve feet in the clear, arched over and covered with earth or sand over which a steeple is to be built—it is to be furnished with nine strong Cedar Cisterns with covers, each capable of containing two hundred gallons.

The entrance to the vault is to be secured by a strong door. A well is to be sunk at a convenient distance, and furnished with a curb, bucket and rope completely.

The builder to find and pay for all the materials, labor, workmanship, provisions, and other objects of cost, charge or expense, for a sum to be agreed upon, and to execute the before described work and every part thereof in a good and workman-like manner. Convenient payments or advances on security will be made.
