SOMETHING NEW.—GAS BURNING COOK STOYE.—I would respectfully call the attention of the public to one of the greatest improvements ever introduced in Cooking Stoves and Ranges—the burning of the gas arising from the coal, by which means is saved 60 per cent. In fuel and also more intense heat thrown to the bottom of the oyen. We effect the burning of the gases by means of a bollow centre-piece, perforated on the under side, which admits the air in a heated state to mingle with the gages, thus siding its combustion, and causing a flame to pass around the oven equal to a wood fre. This timprovement also preserves the centre piece from rinking down on the fire, thereby saving the expense of repairs. One of the Stoves CAN BE SEEN IN OPERATION.
