Not the least important feature of the Willis machine, is its great eaving in time and labor. It resurces no staying or bracing to fleet up the chain, after the alack is in, but works right ahead, drawing out the atumps in almost as little time as takes to us record its signal provess. We should judge it to be an invaluable imple-ment in a country where a tumps, rocks, or other mate-rial abound, that require inoving. YESTERDAY'S PROCESDIRGS. [Reported for The Press.] Yestorday witnessed a grand revival in the business of the savoral courts, all of which wore quite inrgely attended. Of course, for the first day of the September lerin, the proceedings were mainly of a preparatory character, but constituting, as they do, the groundwork for the determination and disposition of numerous im-portant civil and cruinnal suits they attracted much attention from the parties immediately interested thorein, and served to import to the neichborhood of Chostnut and Fith and Bistin streets the brick and active appearance which it possessed prior to the neichborhood of recreation incident to the vacation of the summer imputes. PHILADELPHIA, October 5, 1839. The bank statement this week shows an increase in he amount of loans, amounting to about one and two-fths per cent. in the aggregate, or three hundred and fty-four thousand dollars. The mercase in the circula-on is but nominal, amounting to eleven thousand six undred dollars, while the deposits have been augmentindiced updates, while the deposite have open augment-id three undred and seventeen thousand dollars. The pocio line has run down one hundred and sixteen thou-

and dollars. The stock market is very dull. On the standard secu The store that a coller per share is gained one day intig an eighth of a dollar per share is gained one day and lost the next, but the variation in prices for standard eccurities seldom exceeds 'f in forty-eight hours. In the incies there is more latitude of movement as to pric ith but little business done.
