Manual of Geology: Treating of the principles of the Science, with special reference to American Geological History. By James D. Dana, M. A., LL. D., Professor of Geology in Yale College.

We have satisfaction in announcing the completion of this important work, the earlier publication of which has been delayed by the opinion of those capable of judging of its merits, in stating our conviction that no work which has been issued on Science will be hailed with more satisfaction than this, or will mark more clearly an era in the history of Geological Literature.

The work forms an octave volume of 800 pages, illustrated with over one thousand figures, and in its entire mechanic execution we have hesitated at no expense or labor which would in any degree add to its beauty, clearness, and value. Price, in hevelled mushin, \$4; half Turkey morocco, marble edges, \$450.

FOR THE PEOPLE,

Not for the medical profession, but for afflicted individuals and families, who, wishing information on the subject, have heretofore been at a loss for any work treating in unprofessional language upon Deafness and its attending evils. This book fills the vacuum. It is clear and comprehensive, and should, therefore, find its way into the hands of every individual suffering with Deafness, or any accompanying affliction. Its value will be at once appreciated.

Sold by Booksellers everywhere, and it will be sent by mail free, on receipt of One Dollar, by
