THE READING FIRE INSURANCE AND TRUST COMPANY OF BERKS CO.

ORGANIZED JULY, 1867. CAPITAL $150,000.00.

Office Reading Insurance Building, No. 19 North Fifth street, S. E. Corner of Court street.

Office hours from 8 A. M. to 3 P. M.

DIRECTORS:

J. Pringle Jones, James McKnight,
Henry L. Van Reed, Jacob Shaffner,
J. T. Jackson, D. E. Stout,
Jonas Shalter, J. T. Valentine,
George Riesser.

This Company insures all kinds of property against loss or damage by fire at rates as low as any other reliable Company and upon every plan known to Stock Insurance Companies.

Perpetual Policies issued requiring no renewal and upon which the amount of premium paid can be reclaimed at any time, less a deduction of five per cent. The advantages of this method are worthy of the attention of farmers and others having first-class dwelling houses, barns and other buildings, in town or country, as being the cheapest and safest.

Policies for one, two, three, five or more years, or for less than one year, issued and no charge made for Policy and survey when renewed or when insurances are transferred from other companies.

The citizens of Reading and vicinity, hitherto dependent mainly upon foreign companies, have now the privilege of effecting their insurances in a home institution, well organized, with an adequate paid in and guaranteed capital, presenting as strong a basis of security as that of any other company. The advantage of doing business directly with the Company and the importance of keeping some portion of the large sums paid for insurances, in circulation at home, will be appreciated by all.

VOL. I.—No. 197. READING, PA., MONDAY AFTERNOON, SEPTEMBER 14, 1868. THREE CENTS PER COPY TEN CENTS PER WEEK

IMPORTANT TO IRON MANUFACTURERS.

Description of the Jameson Process for Making Blooms Direct from the Ore.

We copy the following description of a very important invention from a communication from Ringgold, Schuylkill county, Pa., to the Pottsville papers. It will be read with much interest by the people of Reading, who are nearly all directly or indirectly interested in anything relating to the cheap and rapid manufacture of iron and steel:

"In October last, the proprietor of the Ringgold estate, F. W. Hughes, Esq., accepted a proposition from J. Jameson, Esq., to test at the forge of the former (an old-fashioned one then on the property,) a process patented by the Mr. Jameson, for making wrought iron blooms direct from the ore. A furnace adapted to this end upon the Jameson plan was soon erected, and some blooms of a very superior character made, but the water power worked the blowing tubs was interrupted by the heavy fall of snow of the 2nd of December last. Early last March, the experiment was resumed, and after about thirty tons of blooms were made, the quality of which had been tried for boiler plates, steel, and in other ways, the result was deemed a most satisfactory test. The trial furnace, which with the repairs of the old forge and the materials had cost some $7000, was then torn away, and along with the old forge fully removed. On its site has since been erected a large establishment—everything new, including an immense steam hammer from the shop of Merrick & Son of Phila. Three new furnaces, each having two fires, have been erected, with room for three others.

"The Ringgold Estate has fine beds of iron ore upon it, over 750 town lots upon the plot, and in all some 2500 acres of land, and the works are situated on the Little Schuylkill Railroad half-way between Tamaqua and Port Clinton.

"A Company has been organized with a capital of $200,000, called "The Ringgold Iron Company," of which A. Focht, Esq., is President, and F. W. Hughes, Gideon Bast, Jacob Huntzinger and Jacob Jameson are the Directors. The works are now in full operation, working night and day, and blooms fully equal, if not superior, to the best blooms made from No. 1 charcoal cold blast pig metal are being made from the three furnaces in operation, at the rate of about 30 tons per week. The merits of this process are most extraordinary and must certainly effect a complete and radical change in the mode of manufacturing wrought iron. Let me give your readers some idea of this process:

"The furnaces, each with two fires, are constructed at a cost of about $1200, and each are capable of producing ten tons of blooms per week. They are somewhat of an oven shape, having however a stack from the top of about 20 feet in height. A refining fire is in front, into which the blast pipes enter on the side. The gas that is evolved from the fuel passes into a chamber, where combustion takes place, and thence the combustion of the gases continues till above the fifth chamber it passes (together with such deleterious qualities as have been taken up from the ore in its progress) through and out of the stack. The five chambers are called in the Jameson Patents the deoxydizing chambers. The ores are calcined, then crushed, and first placed in the top or fifth chamber. Into the first and second chambers a small jet of steam is injected whereby hydrogen is generated for the purpose of aiding in desulphurating and dephosphorating the ores. The floor of the top chamber is a table made of fire-clay blocks, with an opening at the end opposite from the door or entrance through which the raw ore is thrown in. On this table the ore is spread out, and after being here subjected to the operation of the burning gases it is then pushed down through the opening at the end of the table opposite to the door on to a like table in the chamber below, where it is again spread out; and here it remains for a time and in like manner passes on to the table of the third chamber; there, after undergoing a like operation, it is passed to the the second chamber; thence it goes to the bottom or first chamber. Thus every particle of the ore is equally operated upon. By this time the ore is almost a pulp, and then it is passed into the charcoal bed and refining chamber. Here the loop is soon formed, when it is taken out, and the hammer soon presents you with a bloom of from 225 to 250 pounds in weight. It is not claimed that to make wrought iron direct from the ore has anything new about it. Probably half the blooms made in America are thus produced. Generally, they are of an inferior quality, and involve a large expenditure of fuel and of ore. It is not so however with the blooms made by the Jameson process. It is claimed that a ton of blooms can be made by this process with about the same expenditure of fuel and ore that it requires to make a ton of pig metal in the blast furnace. The experience of Ringgold shows that 200 bushels of good charcoal and about 2½ tons of fifty per cent. ore will yield a ton of blooms.

"This process claims, and the experience here fully establishes that claim, that the ore is not only fully deoxydized, but also desulphurated and dephosphorated. With the single exception of a few blooms made from a certain ore, it has been found by analysis that neither sulphur nor phosphorus were present in the iron made, and steel of the best quality has been made from it. Prior to the Jameson process all experiments to make blooms by the direct process, where the flame was brought in direct contact with the ore, have failed. The difficulties encountered were that the great heat consumed and carbureted the metal, while the too great heat slagged the ore before it reached the refining chamber. By the Jameson process all these points are fully obviated. The heat is kept down to that temperature and the blast is so regulated that the metal is not consumed nor carbureted, nor the ores slagged, but on the contrary, the ores are completely deoxydized and by the chemical influences brought into operation in the manner before described, thoroughly cleansed of sulphur and phosphorus. The cost of making blooms by this process is about $6 per ton more than the cost of making pig metal in the ordinary blast furnace.

"The alternatives adopted hitherto to obviate the difficulties encountered by other processes wherein the flame was brought into contact with the ore, were to encase the ore in retorts and canisters. These have failed because of the intense heat necessary—not only destructive of the retorts and canisters, but the furnaces themselves, and also because of the impossibility of a uniform reduction of the ores; and in consequence, while many good blooms were made, more defective ones were produced. By the Jameson process the production is *unfailingly uniform.*

"What I have thus crudely stated, avoiding technical terms, may give the reader a general idea of this truly novel and radical improvement in the manufacture of wrought iron; but the practical as well perhaps as the scientific manufacturer will better understand it by a visit to Ringgold. All are invited to come and judge for themselves.

Mr. Jameson claims in his patents the manufacture of pig metal and of steel, with but slight variations, in each case in the construction of the furnaces.

—In California, a steam plough has been invented, which it is said can, in soil free from stones, strong roots and stumps, plough from 30 to 40 acres each day for $1.50 per acre.

—A favorite style of dress for gentlemen in Paris this summer has been coats, vests and trowsers of white silk, with blue cravats.

—New Orleans is insolvent and cannot pay its employees. No one will lend its financial agents money, even at exorbitant rates of interest. The difficulty bears especially hard on the policemen and school teachers. So much for the rule of carpet-baggers.

ARRIVAL AND DEPARTURE OF STAGES AND MAILS.

Reading, July 25, 1868.

REAMSTOWN MAIL AND STAGE LINE

Leaves Reading at 8 a. m., tri-weekly. Tuesday, Thursday and Saturday. Returns same days at 5 p. m.

It serves the following named Post Offices: Cumru, Gouglersville, Adamstown, Schwartsville, Reamstown.

ATTENTION, TAX-PAYERS.

ALL REAL ESTATE AND PERSONAL City Taxes for 1868 are to be paid to the Treasurer of the city on or before the first day of October. After that date [illegible] per cent. will be added to all taxes remaining unpaid, and on the first day of November [illegible] per cent. additional will be added. Duplicates have been placed in the hands of the Collectors, who are required to collect the same, and they will be in the office of the Treasurer, on the first day of January, 1869, when Delinquent Real Estate taxes will be given to the City Solicitor, who will cause liens to be entered against all delinquents.

The Treasurer will be found during the day and [illegible] in the office of the Collectors, who will be found in the [illegible] Streets, [illegible] Franklin [illegible] Ward.

WM. ADDICKS SMITH, Treasurer.
