

# LIVE NEWS OF TWO PITTSSTONS

[THE SCRANTON TRIBUNE'S Pittston department is in charge of M. W. Deary, to whom news items and complaints may be referred.]

### A Substantial Donation.

In accordance with the desire of A. B. Brown, Chief Engineer of J. H. Mullin, of the fire department, distributed the amount set forth in the following letter among the several fire companies last evening at the Niagara engine rooms.

Pittston, Pa., March 1, 1894.  
John H. Mullin, Chief Pittston Fire Department:  
Dear Sir—Enclosed check for \$75 per month to forward to you, as a donation to be distributed among the companies who participated in extinguishing the fire at my house Sunday last. At the same time I beg to express to the different companies my sincere thanks and appreciation for the prompt and efficient services rendered.  
Yours respectfully,  
A. B. Brown.

Only twenty-nine days.

### Quarter Sessions Jury.

The following citizens have been drawn as jurymen to serve at criminal court to meet April 25:  
Pittston—George Smith, miner; James Corcoran, hotel.  
West Pittston—William M. Watson, cashier; J. H. Mosier, contractor; Alex. McDougall, merchant.  
Yatesville—William Brown, miner; Jenkins—Peter Durkin, teacher.  
Wyoming—Merritt Sax, Justice.

### Water Company Asks for Right.

The Mill Brook Water company, of Pittston, filed a petition yesterday asking the court to grant it the privilege of constructing a reservoir upon lands of the Hillside Coal and Iron company. The statement says that the water company has attempted to compensate the defendant company for damages done by the use of the land, but that the compensation could not be agreed upon, and that therefore was tendered to the defendant company bond and securities, but the same were refused. The petition asks the court to approve the bond and privilege.—Wilkes-Barre Record.

### Cure for Headache.

As a remedy for all forms of Headache Electric Bitters has proved to be the very best. It effects a permanent cure and the most dreaded headache is banished and yields to its influence. Where all others are afflicted to procure a bottle and give this remedy a fair trial. In cases of habitual constipation Electric Bitters cures by giving the needed tone to the bowels, and few cases long resist the use of this medicine. Try it once. Large bottles only fifty cents at Matthews' Drug store.

Only twenty-nine days.

### PITTSSTON CONDENSATIONS.

The Lehigh Valley Railroad company, ever watchful for the interests of the public, have stationed a flagman at the Port Griffith crossing.  
The molding department of the stove works is idle today, owing to a delay in shipping pig iron.  
The Father-Matthew Total Abstinence and Benevolent society will elect officers for the ensuing year at their meeting tomorrow.

The Gazette commenting on the illegal liquor traffic done in this vicinity, has the following to say: "The granting of liquor licenses in this neighborhood by the court is worthy of all commendation. That there are altogether too many saloons in Pittston is conceded by all who have the welfare of the town at heart, and it is to be hoped, now that the court has evidenced its desire to restrict the traffic, that the constables will make it their business to see that those to whom licenses are granted abide by the letter of the law. The time has come for the illegal liquor business that is daily being done hereabouts to be banished without a groan."

### Horseshoeing.

This is a subject upon which much has been written. It has engaged the minds of many men in various walks of life; numerous and various kinds of shoes have been devised, and so-called systems of shoeing, as for instance, the Dunsbar system, which at one time enjoyed considerable notoriety, each of which, in the opinion of its originator, would prove to be a solution of the problem. The subject, however, still remains a debatable one, because there has been a universal, but mistaken, belief in uniformity of horse's feet. No two feet are alike any more than human faces.

It is therefore impossible to devise a shoe of any special design that is perfectly adapted to all feet. For example, we find a distinct type of features, peculiar to each race of the human family; also a constant dissimilarity in the faces belonging to the same race. So in observing horse feet I find several distinct types, and dissimilarity of feet belonging to each type. This is the chief reason why some horses are seldom or never lame in the feet, although carelessly or abusively shod, while others are subject to lameness from corns and other lesions of the feet and limbs, unless shod in the most careful and intelligent manner.

The best type of foot to bear with impunity the artificial condition incident to city life, (as stables, and pavements, and the ordinary routine shoeing, which throws the weight and stress upon the wall.) Such feet I say are not very rare at the plant or horse, and rather straight—extend well backward and are not too deep at the heels.

Space will not admit of a description of the several types of which are more or less liable to corns, to abscesses in the heels, which often break out at the coronet and various other regions. In regard to shoeing the fact is, that to obtain the best possible results, to come within the range of scientific shoeing, each horse and each foot must be shod according to its individual requirements or peculiarities, with not only a view of protecting the foot from excessive wear and tear, but of permitting its several parts to perform their functions in a natural manner. For exercise is necessary to maintain normal circulation of the blood, which is essential to maintain nutrition and rapid removal of the sensitive and external structures. I refer especially to the frog, plant or cushion and festeria portions of the foot, not excepting the nutrition of the navicular bone itself. Again, to shoe scientifically each foot must be kept in proper balance and relative to the limb it supports from month to month and year to year. When this is done and the plant or surface of the foot is kept in such condition that the natural process of flaking or exfoliation of the sole (whereby it regulates itself to its own proper thickness), is not too much retarded. Then, I say, corns, cracked hoofs and interfering will be things of the past; and there will not be more than one splint, or case of gradually progressive navicular lameness, now

# GEN. GREENLEAF.

## He Knows No Equal of Paine's Celery Compound.

## A Soldier Who Has the Courage of His Convictions—Commander of the National Guard of His State.

"I feel like a new man," says Brig. Gen. W. L. Greenleaf, of the National Guard of Vermont.  
"I do not know the equal of Paine's celery compound."  
Brig. Gen. Greenleaf of Burlington, Vt., is a man of national reputation. As a soldier he has the courage of his convictions, and manfully makes a public statement of what he knows will benefit others. He writes as follows:

"Permit me to add my testimony to the valuable qualities of Paine's celery compound, which I consider the best preparation of its class on the market. From an experience of nearly 20 years in the handling of drugs, I am familiar with the medical properties of its various ingredients, and I do not hesitate to recommend it, especially as I never heard of a case where it did not give perfect satisfaction.  
"I have used it myself on several occasions, and always with benefit. Last Spring, being very much run down and debilitated, I procured some of Paine's celery compound and commenced taking it. The first bottle produced very marked results, and the use of two bottles made me feel like a new man. As a general tonic I do not know its equal."  
Nervous debility produces morbid changes in the blood vessels. They become relaxed, weakened, and lose their state of healthy contraction. The relaxed condition of the arteries admits

a large current of blood. And, as a consequence, its motion becomes so much slower and more sluggish, congestion of the lining of the blood vessels ensues, with the resulting formation of morbid matter, which is thrown into the blood stream, producing rheumatism, gout, neuralgia, diseases of liver and kidneys, nervous weakness and debility, and the many direct signs of impure blood, as skin diseases, in some of the many forms.  
Paine's celery compound cures nervous debility.  
The recently published testimonials from W. E. Anthony, M. D., of Providence, E. H. Jenkins, M. D., of Portland, Dr. J. H. Lindsay, C. E. Cole, M. D., and medical director of the Francis Chien Medical Institute, and hosts of prominent practitioners all over the country have resulted in the most extraordinary sale of this extraordinary remedy that was first prescribed by Dr. Phelps of Dartmouth college, and has since come to be known to the medical profession, and, in fact, the whole people, as Paine's celery compound.  
People of the highest standing in all classes of society, in every city and town in the Union, have been benefited by this, the greatest of all remedies for the cure of the numerous ills that result from impaired nervous system and impoverished blood.  
It makes people well.

### LETTERS FROM THE PEOPLE

Under this heading short letters of interest will be published when accompanied for publication by the writer's name. The Tribune will not be held responsible for opinions here expressed.

### Horseshoeing.

This is a subject upon which much has been written. It has engaged the minds of many men in various walks of life; numerous and various kinds of shoes have been devised, and so-called systems of shoeing, as for instance, the Dunsbar system, which at one time enjoyed considerable notoriety, each of which, in the opinion of its originator, would prove to be a solution of the problem. The subject, however, still remains a debatable one, because there has been a universal, but mistaken, belief in uniformity of horse's feet. No two feet are alike any more than human faces.

It is therefore impossible to devise a shoe of any special design that is perfectly adapted to all feet. For example, we find a distinct type of features, peculiar to each race of the human family; also a constant dissimilarity in the faces belonging to the same race. So in observing horse feet I find several distinct types, and dissimilarity of feet belonging to each type. This is the chief reason why some horses are seldom or never lame in the feet, although carelessly or abusively shod, while others are subject to lameness from corns and other lesions of the feet and limbs, unless shod in the most careful and intelligent manner.

The best type of foot to bear with impunity the artificial condition incident to city life, (as stables, and pavements, and the ordinary routine shoeing, which throws the weight and stress upon the wall.) Such feet I say are not very rare at the plant or horse, and rather straight—extend well backward and are not too deep at the heels.

Space will not admit of a description of the several types of which are more or less liable to corns, to abscesses in the heels, which often break out at the coronet and various other regions. In regard to shoeing the fact is, that to obtain the best possible results, to come within the range of scientific shoeing, each horse and each foot must be shod according to its individual requirements or peculiarities, with not only a view of protecting the foot from excessive wear and tear, but of permitting its several parts to perform their functions in a natural manner. I refer especially to the frog, plant or cushion and festeria portions of the foot, not excepting the nutrition of the navicular bone itself. Again, to shoe scientifically each foot must be kept in proper balance and relative to the limb it supports from month to month and year to year. When this is done and the plant or surface of the foot is kept in such condition that the natural process of flaking or exfoliation of the sole (whereby it regulates itself to its own proper thickness), is not too much retarded. Then, I say, corns, cracked hoofs and interfering will be things of the past; and there will not be more than one splint, or case of gradually progressive navicular lameness, now

Do not put off taking medicine. Numerous little ailments, if neglected, will soon break up the system. Take Hood's Sarsaparilla now to dispel disease, giving strength and appetite.  
Hood's Pills cures constipation by restoring the peristaltic action of the alimentary canal.  
There is nothing like Dr. Thomas' Electric Oil to quickly cure a cold or relieve headaches. Written by Mrs. M. J. Fellows, Burr Oak, St. Joseph Co., Mich.

906 South Washington Avenue.

# KNOWLEDGE IS POWER

THE possessions of men's hands are quickly consumed, but knowledge, which is the mind's richest estate, endures forever.

Liberty and ignorance cannot go hand in hand. If you know less than your neighbor you are to that extent a slave to your neighbor.

## "KNOWLEDGE IS POWER."

If any one publication can be said to contain all human knowledge it is The Tribune Edition

# ENCYCLOPEDIA BRITANNICA.

Truly it may be said that what it does not contain is not worth knowing. 22,000 Pages, 25 Large Quarto Volumes, an average of 800 Pages per Volume. 16,494 Articles, averaging 142 pages each. 3,339 Articles signed by specialists, 142 per volume. 16,255 pages, written by special contributors, forming four-fifths of the entire work. 338 Full-Page Engraved Plates, containing over 500 separate illustrations. 671 Maps and Plans, including 237 Colored Maps, 9,902 Illustrations, exclusive of Maps and Plans.

If you were ordering this made for yourself, hiring all the work done, it would cost you 3,000,000 of dollars. This no one could afford. If you were buying the books at retail, this great work would cost you in the Edinburgh Edition from \$125 to \$200; but, by taking advantage of the wholesale club rates which THE TRIBUNE freely extends to you for a short time you can secure this magnificent, unequalled Library at

## 10 CENTS PER DAY.

The authority of the Encyclopedia Britannica has never been questioned in any Court of Justice. It is the essence of the ripest scholarship and the keenest genius of the world has ever known.

It is the pipe line connection to the great fountain of knowledge. No wonder such a man as the London divine, DR. SPURGEON, said of this work: "If all other books should be destroyed, the Bible excepted, the world would have lost but little of its information."

Only twenty-nine days.

# MARCH 3, 1894. TRIBUNE COUPON

Your choice of three beautiful pictures, "Telephone Girl," "Delivering Christmas Presents," and "Maidens Swinging." Send by mail or messenger or bring coupons like this of three different dates, with 10 cents, stamps or coin, to
