

Lively Incidents Across the Pond

Interesting News Letter from Our London Correspondent.

WAR RUMORS CAUSE TROUBLE

Trifling Train Wreck in a Fog--Trip to Chintatun Not a Success--Marriage of an Actress by Gome Days.

Americans Lunch With Cobby.

London, Oct. 6.

The sudden summoning of a cabinet council two or three days back caused quite a sensation in London, and in fact, throughout England. The evening papers found it to be the most important relations between England and France were strained, the French were blockading all the ports of Madagascar, and the council was called to take active measures against the disturbance.

Great consternation was felt throughout London when the news came that the Scotch express, with a terrible accident, it was generally believed that Lord Rosebery was traveling by the train to attend the council meeting. Had the accident brought relief, the accident, though a serious and fatal one, was in no wise as bad as reported, and Lord Rosebery had left Edinburgh by an earlier train, but Mr. Arthur Balfour, the secretary of state, was also Lord Hindlip, the deputy chairman of the company.

A railway accident with real live cabinet councilmen in the train, and a sudden cabinet meeting, a mystery and a character, make up excitement enough in one week for any ordinary city. But then London is no ordinary place and it worked itself up to a frenzied pitch over yet another incident of the kind.

A railway accident with real live cabinet councilmen in the train, and a sudden cabinet meeting, a mystery and a character, make up excitement enough in one week for any ordinary city. But then London is no ordinary place and it worked itself up to a frenzied pitch over yet another incident of the kind.

Mr. Hoy's piece, "A Trip to Chintatun," has not taken at all successfully in London. As a matter of fact, these "variety" pieces have been very much overdone. The principle part was taken by Mr. J. G. Knowles, who is better known in our music halls as "a very eccentric American comedian."

Much surprise has been occasioned by the news of Mrs. Stirling's marriage to Sir Charles Hutton Gregory, K. C. M. G. The bridegroom has seen his birthdays and the blushing bride has celebrated even more. She was a great favorite in Macready's day and acted with the tragedian for several years, taking the leading parts. Of late years she has appeared on several occasions as the nurse in "Romeo and Juliet," notably in conjunction with Miss Mary Anderson. Lady Hutton is a brilliant conversationalist and unites in the best society. Well, well--we all show our madness in different ways, and in her case once bitten has not been twice shy.

A royal commission has been considering the best means of governing the city of London. At present the duties are divided into the council, which comprises the business part of the town is ruled by the aldermen more or less, while the outlying part is guarded by the county council. The commission advises a city council to govern the whole of London, to elect aldermen and mayor by popular vote and to take possession of the mansion houses and the guild hall. The recommendations are popular and will give the average Londoner a much larger voice in the management of their city, a thing much to be desired. The scheme provides a number of offices to exercise functions restricted to localities, and recommends a triennial election of councilmen to the central body.

Music Pays When One Is Handsome

Appearance Rather Than Merit is Often the Signal for Success.

CASE OF LILLIAN RUSSELL

Not Many Years Ago She Was an Impetuous Chorus Girl at Tony Pastor's: Now She Is a Regular Financial Princess of Song.

Who says music doesn't pay? Look at Lillian Russell--if we may mention her in the same breath with music. When she sang for Tony Pastor she received \$25 a week. James C. Duff offered her \$200 a week and she took it. The Casino made it \$200. T. Henry French, who just about that time wanted to drop in the Garden theater, New York, some of the large profits of his ancestral play-publishing gave the fair Lillian \$800. This sufficed to keep her very highness out of the poor house until Canary and Lederer--George Lederer, brother of Wykes--came to see her. He, of course, you do--raised the limit to a round thousand. Last of all, Abbey, Schofield & Grau have made a contract with her at \$1,000 a week.

The event to which the music lovers look forward with the greatest interest is undoubtedly the American debut of Eugene Ysaie, the Belgian violinist. The violinist's name and name in the world already established. He can add nothing to his reputation as an artist, for in his school he is absolutely perfect. He is a native of Brussels, where he received his first instruction from his father, Nicholas Ysaie. After a few years in the famous conservatory at Liege, he spent some time in Paris, where he completed his studies in the conservatory of the school of Joseph T. de Mante, which is now one of the most complete of its kind in the world. He was appointed high professor at the Royal conservatory at Brussels, where he has since continued the school formerly presided over by his two masters, Wieniawski and Vieuxtemps. The effects of his great attention to this school are readily seen in the brilliant playing of the young violinist. He is a pupil of Georges Mathias and de Beriot, and received the first prize at the Paris conservatory in 1881. Miss Theodor Pfaff, the dramatic soprano, completes this choice company, which illustrates the old maxim of "infinite riches in a little room."

The eldest son of the duke of Cambridge was out shooting with his other big guns the other day when he had a bigger bag than he anticipated. He shot several pheasants and two partridges, which he thought, some birds rising from the undergrowth and banded away in a haphazard manner. Howles and groans followed the discharge and the alarm party returned to the house with a few fellows writhing in agony on the ground and plentifully perforated with small shot. One man was taken to the hospital in a serious condition and another, who was distinguished by the name of "Cousin Fitzgore," died of a bullet wound in the chest. It is still fresh in the memory of the people that kindly Prince Christian lost an eye owing to an accident of this kind. It is a sad story, but it is a warning to all who go out shooting to be careful.

Mr. J. McNeill Whistler is a bumpkin little man, but he is also a very good painter. He is a native of London, and was born in 1804. He was a member of the Royal Academy, and was elected a knight of the Order of St. Michael and St. George in 1879. He died in 1904.

HERMIT OF SAN CLEMENTE.

The Only Inhabitant of an Island 60 Miles Off the California Coast.

San Clemente Island, which lies sixty miles off the coast of California, is a small, rocky island, about two miles long and one-half mile wide. It is a very fertile island, and is covered with a growth of Spanish bayonet and other plants. It is a very beautiful island, and is a favorite resort for the fishermen of the coast. It is a very interesting island, and is a very important one for the fishermen of the coast.

There is but one human being on San Clemente, the hermit, Tom Gallagher. Tom is a character with a history. He was a sailor, and was once a member of the crew of the ship "The Flying Dutchman." He was a very brave man, and was once a member of the crew of the ship "The Flying Dutchman." He was a very brave man, and was once a member of the crew of the ship "The Flying Dutchman."

There are people who claim to know Tom's history, and it is a romantic story, they say, with a love affair in it, of course. The woman lived him, and he sought the island center. Tom was in a comfortable hut, with a vegetable patch, chickens, a goat, and his sheep. His is a regular Robinson Crusoe outfit, except that there is no man Friday to serve him. This is the story of San Clemente, and it is a very interesting one.

Old Fellow Commandments.

The ten commandments of Old Fellowship: Thou shalt be upright in thy dealings with men; Thou shalt not cheat the folks of thy brother; Thou shalt be obedient to the laws of thy country; Thou shalt venerate religion; Thou shalt visit the sick; Thou shalt relieve the distressed; Thou shalt bury the dead; Thou shalt care for the widow; Thou shalt be true to the orphan; Thou shalt regard God as thy Father and all mankind as thy brethren--Dominion O'Gill Farris.

His Fortune.

Pile on the logs; the bright flames start. And up the roaring chimney race; How grateful should we be, sweetheart, For just this little fireplace! I said today that I was poor-- And poor I may be; But here's a shillie--who needs more? And your bright eyes to beam for me! No sculptured busts, no paintings rare! Adorn the mantle and the shelf; Sweeten the air with the perfume of hair--Is all--a picture of yourself! We have no wild dreams of fame, And all our worldly wants are few; What care I for a laureled name, Who live the sweetest name in you? Lean, golden head, upon my breast-- Hath crowned my life and made me blest, And kiss me, dear, and make me rich-- Frank L. Stanton.

Sound Breathing Means Long Life

Keep the Lungs Well Filled with Pure Air and Avoid Consumption. A FEW SIMPLE EXERCISES

Physical Director Weston Explains How Men of Sedentary Habits May Avoid Many of the Ills That Pursue Those Who Do Not Exercise.

It will be well for me, at the outset, to say something about the principal organs of respiration. The lungs are conical in form and are enclosed in a cavity called the chest. The sides are composed of ribs, muscles and skin. The diaphragm, a muscular membrane beneath the shoulders and is more or less rigid while at the bottom the lungs are free and unhindered in their movements.

The chests of singers, gymnasts and those living in elevated regions are the largest, and it is claimed that those who live in the lofty plains of Peru acquire the chest in proportion to the weight of their body by successive use of their climbing. On the other hand, disuse of parts of the lungs result in flatness of chest, while disease will produce a deformity.

The quantity of air breathed daily can be judged by the rate at which the breathing occurs. The average number is about fifteen to the minute and about thirty cubic inches of air per breath. There are two kinds of breathing, namely, abdominal or diaphragmatic costal or chest breathing. Abdominal is the only correct way. In this style of breathing the chest and abdomen alternately expand and contract and anything that prevents their free movements must be avoided or health will be endangered.

The Effect of Dress. The two types of breathing were first observed by a Dutch physician in 1741, not only among adults but among children before they were a year old. The costal style of breathing is believed to be due to the fact that, on account of dress which is worn over the abdominal movements. This is proved by taking the females of a wild race, showing that 75 per cent. of them gave up the costal style of breathing when they were dressed in European style of clothing. Correct habits of breathing are more than mere help to the chest and health and is the best preventive against consumption, as proven by statistics.

Breathing has an important bearing of the calculation by which the blood is purified and enriched. William Blandie, of New York, author of "How to Get Strong," states that the average man has an inch or two added to the capacity of the chest means not only a stronger one but greater power to resist disease. The left apex of the lungs are the first to be affected by tuberculosis. Consumption is not a disease which starts in a day, but is an outgrowth of morbid habits and agencies. Defective habits of breathing are wide spread, and are the cause of many of the ailments of the chest and lungs. Many flat chested and round-shouldered people in other walks of life rarely fully inflate their lungs.

Plenty of pure air and good food will build up and strengthen the entire system. Notice the majority of our business men and you will readily see at a glance that the upper part of their chest is flattened, tall, narrow, and assumed in their offices. I do not think there is any man but what can have his lungs increased in size by following out these exercises. I would advise in your daily walks to take from business that you attempt the following exercises:

Rules of Good Breathing. First--When you are at your desk writing sit as far back on the seat as possible so that the lower end of the spine will be at the level of the shoulders. Second--When you are sitting at your desk, never through the mouth, excepting while you are in the hands of a specialist. Have your nose treated so that the air may be tempered and purified before entering the lungs. Take this exercise in your office, every time you think of it, wherever the air is pure. I would suggest as a regular course, the action of the intercostal muscles, in the morning by those wishing to enlarge their vital capacity.

Some Breathing Exercises. 1. Stand erect, head up, chin out, hands on hips, elbows well back. Inflate slowly from the bottom around the waist until your capacity is reached; then let it out slowly as long as possible. This style of breathing will be carried on by the diaphragm and is called abdominal breathing and is called abdominal breathing. 2. Clasp hands behind head, inhale slowly and evenly, lifting and raising your chest to the utmost capacity. This style of breathing is brought about by the action of the intercostal muscles, will raise the ribs and is called costal breathing. I would advise exercises to alternate these two styles of breathing.

3. Start with the arms overhead, knuckles front; bring your arms down to a front horizontal; spread them to side horizontal; together in front and breathe from the abdomen. As the arms are brought up, hold the air and repeat eight times. If you get dizzy, stop it for a while, and gradually increase as you get stronger. There is no exercise as a breathing direction as the one which will tend to give you such a good, round, full chest as this exercise will, and I know of one man that increased the size of his chest four inches in three months by these few, simple breathing exercises. Send your private exhibition showed how he fills his chest fourteen inches, first breathing slowly and forcing the air to the utmost capacity. His breathing is abdominal and costal.

R. L. Weston

Burned His Kerchief.

What a prosperous world this would be if young men would apply their wits industriously to affairs of business as they do in emergencies where their fair sex is concerned! This thought was suggested by the story of a young insurance man who went out for a moonlight stroll on the banks of the Hudson, and on the way back he was stopped by a handsome young woman. She drove through the western part of the city, and concluded to go through the beautiful avenues of Western park. Just when they reached the gate the guard stopped them with the command that they must stay out or have lights in the lamps of their conveyance. There was no score near, and they were about to give up the idea of a delightful drive under the shady trees, when, in utter desperation, the young man drew forth a silk handkerchief, coiled it up and lit one end after putting it in the lamp. The guard did not notice the trick, and they passed through the gate. The handkerchief quickly burned out, leaving them in the dark and in the park-- Louisville Courier-Journal.

THIRD NATIONAL BANK OF SCRANTON.

ORGANIZED 1872.

CAPITAL - \$200,000 SURPLUS - \$250,000

This bank offers to depositors every facility warranted by their balances, business and responsibility. Special attention given to business accounts.

WILLIAM CONNELL, President. GEO. H. CATLIN, Vice-President. WILLIAM H. PECK, Cashier.

DIRECTORS: William Connell, George H. Catlin, Alfred Hand, James Archibald, Henry Helm, Jr., William T. Smith, Luther Keller.

THE TRADERS

National Bank of Scranton.

ORGANIZED 1890.

CAPITAL 250,000 SURPLUS \$30,000

SAMUEL HINES, President. W. W. WATSON, Vice-President. A. B. WILLIAMS, Cashier.

DIRECTORS: Samuel Hines, James M. Eberhart, Irving A. Finch, Pierce B. Finley, Joseph J. Jerny, M. E. Kesteven, Charles F. Matthews, John T. Porter, W. W. Watson.

PROMPT, ENERGETIC, CONSERVATIVE and LIBERAL.

This bank invites the patronage of business men and firms generally.

ACHING SIDES AND BACK

Hip, Kidney, and uterine pains and weakness relieved in one minute by the first and only pain-killing plaster.

ACHES AND PAINS

For headache (whether sick or nervous), toothache, neuralgia, rheumatism, lumbago, pains and weakness in the back, spine or kidneys, pains around the liver, pleurisy, swelling of the joints and pains from all kinds, the application of Radway's Ready Relief will afford immediate ease, and its continued use for a few days effect a permanent cure.

A CURE FOR ALL

Summer Complaints

Dysentery, Diarrhoea, Cholera Morbus, Malaria in its Various Forms Cured and Prevented.
