## ASSOCIATION'S BIG NIGHT

Formal Winter Opening and Reception of the Y. M. C. A.

THOUSAND GUESTS ATTENDED

They Were Young Men and Boys of All Sorts—Entertainment Offered Was Just to Their Liking.

Many New Members.

Last night was a red-letter night in the history of the Young Men's Christian association. It witnessed the formal opening for the winter of the educational department and the main training school, now jointly known as the John Raymond institute and the occasion also included the introduction of the new headquarters and the large corps of teachers.

For the occasion the association had issued over 4,000 invitations to the young men of the city, irrespective of race, creed or color, and it was estimated that those present numbered about 1,000. For their entertainment the of the association had arranged a sort of running pot-pourri of vocal and instrumental music and refreshments instead of the old and tedious programme of stiff and stereotyped character.

The work of the Young Men's Christian association is not confined to the physical advancement of the young men, but it is also a moral, mental, spiritual and physical advancement that has not been more eloquently portrayed than by the strong and convincing address of the large building. The address was made by a representative gathering of hardy young men, who were dressed in a variety of costumes, and who were in the best of health and spirits.

## FACTS ABOUT USE OF CULM

Professor Harvey E. Mole, of Cornell, Asks for Them.

SECRETARY ATHERTON'S REPLY

To the Effect That Scranton Possesses an Inexhaustible Supply of That Kind of Cheap Fuel—Growing Agitation About Use of Culm.

At frequent intervals there comes to the board of trade's secretary, D. H. Atherton, some new assurance that culm as a fuel is beyond simple theory and is receiving practical as well as scientific attention. This is illustrated in a letter received yesterday from one of the lecturers of the mechanical engineering department of Cornell university, and asking for facts and figures which might be used in a lecture to the students. The letter is as follows:

D. H. Atherton, Esq., Secretary Board of Trade, Scranton, Pa.  
Dear Sir—I am preparing a paper to be read before the students in the mechanical engineering department of Cornell university, and asking for facts and figures which might be used in a lecture to the students. The letter is as follows:

The culm piles, as I remember them, are very close to Scranton and consequently just where a manufacturing plant would be established. In the event that a large manufacturing center be established at Scranton, and in time thus reduce the present culm piles, would the culm from the daily mining of the surface of the city be sufficient to supply the needs of the city? The culm piles, as I remember them, are very close to Scranton and consequently just where a manufacturing plant would be established.

The culm piles, as I remember them, are very close to Scranton and consequently just where a manufacturing plant would be established. In the event that a large manufacturing center be established at Scranton, and in time thus reduce the present culm piles, would the culm from the daily mining of the surface of the city be sufficient to supply the needs of the city? The culm piles, as I remember them, are very close to Scranton and consequently just where a manufacturing plant would be established.
