## Reighboring Counties.

#### NORTHEASTERN ... PENNSYLVANIA

There are 111 prisoners in the Lu

An early closing movement is on foo in Nanticoke. Sugar Notch is preparing to build a

new town hall. Congressman Williams is spending the week at his home in Wilkes-Barre. The shirt factory at Susquehanna gives steady employment to sixty girls. Nanticoke wheelmen have organized and will hold races at Dundee park on

Wilkes-Barre's tax receiver will have the city patrol wagon at his service to haul in delinquent taxpayers in style. The Susquehanna river at Columbia. has been stocked with 100,000 muskalogne, gamy fish from the St. Law

Burglars attempted to rob Sword & Sons' store in Parsons, but were frightened before they had secured any.

Mrs. William Eggleston, of Wilkes Barre, who fell out of a pern door and suffered a broken back, died from her

inturies. E. M. Rosser, bookkeeper in the Kingston Savings and Deposit bank, has been promoted to the position of

assitant cashier. An unsuccessful atempt was made by burglars to crack the safe in the Philadelphia the first Wednesday in store of the White Hardware company in Wilkes-Barre. While L. Addison's family sat on the

front porch of their house in Miner's Mills a sneak thief entered through a rear door and stole \$5. Isaac Osterhout, station agent at

La Grange, caught a black bass weighing six and one-half pounds, at the head of Osterhout Island. Landlord Frear, of the Winola House,

is making arrangements for his annual opening, which will be about the middle of the present month. The relief association organized at the time of the disaster in Hartford

mine in Ashley in 1890 has exhausted its funds, and is preparing to wind up its business. Michael Sabonis, single, aged 35 years, was taken seriously ill while at

work in No. 2 breaker of the Kingston Coal company. He was taken home and died shortly afterward. The Edgerton Coal company have been making extensive improvements

on their breaker by adding a new wing, The breaker will now have over double the capacity it had formerly. All the locomotives of the Lehigh Valley Railroad company which have occupied the round houses at East

Mauch Chunk for many years will be removed to Lehighton. Many railroaders will remove there also. Mr. and Mrs. Agib Ricketts, of Wilkes-Barre, have issued invitations to the marriage of their daughter, Anna Piped Ricketts, to William T. Payne. The ceremony will be per-

formed Tuesday evening, June 15, in the First Presbyterian church. Ex-Congressman E. J. Jordan, of Tunkhannock, caught a black bass from Lake Carey on Monday, the opening day of the season, that weighed five pounds and a half and measured 23 inches in length and 17 across.

#### FOREST CITY.

been visiting his parents, Mr. and Mrs. T. G. Watkins, this week.

Miss Jennie Brown is the guest of her grandparents, Mr. and Mrs. Angus Smith, of Starucca, Wayne county. Rev. J. L. Williams, Rev. J. C. Hogan and R. E. Alexander, all of Forest City, are among the seven delegates whom Susquehanna county Prohibitionists have elected to attend the state convention. This place certainly

has its share of the representation. Fruitful Branch, Order of True Amerevening at which important lodge business will be transacted and a full attendance of the members is desired. Attorney L. P. Wedeman, of Scranton, was here on legal business

Wednesday.

The borough council met in regular session Wednesday evening. Thomas P. McCormick, appointed to fill the place of Arnett Bennett, resigned, was sworn in as a councilman. A complaint was made that young men were in the habit of loafing on the corner of the Methodist Episcopal church lot, and that aside from the nuisance of the business, church property had been defaced and destroyed. The matter will be investigated. The company that wants the privilege of putting in sewers, sent word that they did not yet have ready their plans and specifications, but would send them later. D. A. Moore, representing the Mosler Safe company, was at the meeting and showed pictures of a number of different styles of safes. The matter of purchasing one was left with a committee composed of J. Fred Willbrock and John Lynch. Street Commissioner Frank McCloskey was reinstated. but warned to pay strict attention hereafter to the instructions of the street committee. A number of bills Rogers system, not yet in general use, ness was transacted. A committee from the St. Anthony Lithuanian Catholic church presented a petition asking that Lackawanna street be graded and that the sidewalk ordinance be put into force along that thoroughfare. Council meets in regular session again on Wednesday evenin, June 16.

OTHER VICINITY NOTES. Clifford has a "peeping Tom" who was recently cowhided by an enraged

Mrs. William Bryden, of Vandling, is visiting her son, W. D. Bryden, who is in the senior class at Lafayette college, Easton.

#### AMERICAN PROTESTANTS.

The Forty-eighth Annual Convention

to Be Held in Philadelphia. Wilkes-Barre, June 3.-The second day's session of the forty-seventh annual convention of the state grand lodge of the American Protestant association opened this morning in Odd Fellows' hall. The grand officers' reports which had been referred to a committee yesterday, were this morning acted on and all the recommendations of the officers were adopted. The retiring grand master, William C. Hart, was presented with a solid gold past

official's fewel. Grand Master William Cunningham innounced that he would present at the end of the year a pair of silver mounted gavels to the lodge taking in the greatest proportionate number of nembers from now until the next meet-

ing of the grand lodge. A committee of five was appointed to evise the grand lodge constitution, to report one year from date. The committee will be named later by the grand master.

The convention continued in session until 2.15 when it adjourned to meet in June, 1898.

#### SAVED BY CORSET STEEL.

The Bullet Fired by Wilkes-Barre

Woman's Husband Glances Off. Wilkes-Barre, June 3.-David R. Evans is a stone mason living on Regent street. Wilkes-Barre, but he has not been working much during the past year. He has been drinking heavily, and causing his family considerable trouble. He was not home last night, out came in at about 8 o'clock this morning, and had a few words with his wife, whereupon he drew a revolver and fired at her. The bullet fortunately struck one of the steels of her corset, and glanced off, making only

slight wound. Evans then turned the revolver on his daughter Sarah, aged 17 years, but the revolver failed to work, and the daughter escaped unhurt. Evans immediately fled, and at last accounts he had not been captured, though officers are searching for him everywhere,

#### BLEW OUT THE GAS.

Fowanda Young Lady Said to Have

Had a Narrow Escape. Sayre, June 3.-Bessle Bennett, oung lady residing in Towanda, came near bringing death to herself last night at the Wilbur bouse. She went to her room about 11 o'clock and upon retiring blew out the gas and did not turn it off.

About an hour later some of the occupants of nearby rooms discovered that gas was escaping and the clerk was summoned. Miss Bennett's room was locked and it was with some difficulty that she was awakened. The room was aired and she soon revived from a stupor. Had she remained much longer in the room, death would no doubt have resulted. She said she George Watkins, of Olyphant, has did not know how to attend to the gas.

#### CLAIMS THERE IS OIL.

Test Will Soon Be Made on Wyalus-

ing Side of the River. Wyalusing, June 3 .- C. W. Champion, of Golden Hill, who has been leasing oil lands over the river in Southern Bradford and Northern Wyoming, was in town for the past week leasing lands for his company on this side of the river, says the Rocket. He is instructican Ivorites, will hold a meeting this ed to lease land east of the river as far north as Towanda and as soon as sufficient land is secured, his company will

put down a test well. When interviewed in regard to the outlook for oil in this section his smile was not only broad but he gave such a glowing account of the outlook across the river at Lovelton where the pressure of gas at present registers 625 pounds, that his hearers at once became as sanguine of success as he is.

#### LETTERS OVER THE WIRE

Telegraph May Merge Into Mail Service. Invention Which Transmits Three Thousand Words a Minute.

From the New York Tribune.

An increasing amount of attention is being given nowadays to the possi-bilities of rapid telegraphy. By the Wheatstone system, in which a previously punched strip of paper is fed into the transmitter, from 100 to 150 words a minute are now easily sent over a single wire, a speed which is three or four times that of the operator who manipulates a Morse key. By the wers passed, and other routine busi- it is claimed that 200 words a minute can be handled and printed on a typewriter automatically. What is called the Delany system is still more rapid. But all of these achievements and projects are surpassed by a plan which was described last Wednesday evening to the American Institute of Electrical Engineers in this city by Lieutenant George Owen Squier, of the Third United States artillery, and assistant professor of physics at Dartmouth. The same story was told simultaneously in Chicago by Profesor Bedell, a well known expert in such matters. In some experiments conducted by Lieutenant Squier, in co-operation with Professor A. C. Crehore at Fort Monroe, a speed of 1,200 words per minute was actually attained, and the assertion is made that from 3,000 to 6,000 words a minute may be sent by the same system between points as far apart as New York and Chicago

ALTERNATING CURRENT USED.

son Methodist church teday,

rupted by the separation of two wire terminals that have been in contact spark will be emitted. But if an alternating current be interrupted, and if the interruption occurs at just the stage of an alternation which is mid-

way between a positive and a negative wave, there will be no spark, because the force which was flowing in one direction subsides to zero before it begins to flow in the other. What Messrs. Squier and Crehore propose, then, is to interrupt their current and restore it at just such "zero points" in the oscilllation as this. But the sparks will not disappear unless the "make" and "break" occur at precisely the right instant; and thus a single and valuable guide is afforded the operator in

plan is that it utilizes an alternating

current instead of a constant one. With the former type of current the electricity flows first in one direction and then the other with perfect regularity

and with a frequency of change that can be adjusted to the requirements of

the work which the current is called

upon to perform. Now it is a familiar

fact that if a constant current which

possesses any particular force is inter-

ADJUSTING HIS APPARATUS, When he finds that sparking has eased he knows that his transmitter interrupts and restores the flow at the zero stage, and is working in perfect harmony with the particular frequency of alteration employed. The performance of the instrument would then be "synchronous" with that of the dy namo or generator. Hence, such a telegraph may properly be called a "syn-chronograph." In fact, that is the name adopted by Messrs, Squier and

Crehore. Now, let us suppose that the Morse alphabet, which is composed of dots and dashes, is to be tried with this system. In that case a break lasting from the beginning of apositive wave until its end might stand for the dot. and the break from the beginning of a positive wave, but continuing past its subsidence through the rise and fall Mo. Pac. 15% of the negative wave also, would make Nat. Lead 27 of the negative wave also, would make dash. Of course, it does not matter whether the interruption occurs at the beginning of a positive or of a negaive wave. The only essentials are that it shall begin at a zero stage and shall last just half a "cycle" or a whole cycle." It takes a positive and a negative wave together to make a cycle. From these statements one will readily

infer that the length of the spaces BETWEEN DOTS AND DASHES or combinations thereof must also be either half a cycle or some multiple thereof. In most of the experiments described in Lieutenant Squier's story the continental code was used. In this two dots are used in place of the dash of the Morse alphabet. But the prin-

ciples involved are identical. The machine by which messages are sent with an alternating current is very simple. A narrow wheel with a flat, narrow periphery is kept in rotation at a rate which is rapid and is equal to an integer number of cycles. That is to say, when the time required for a revolution is divided by the length of one cycle, there must be no fraction remaining. The quotient must be whole number, like 40. This relation between the two can be maintained accurately by driving the wheel with gearing, either from the dynamo which operates the current, or, what is more practicable, an alternating current notor operated by the very electricity used in telegraphing. Let us imagine, now, that the wire carrying the message is cut in two, and the adjacent

#### ends are provided with

or "brushes," and that these two Third National Bank ... current will flow from one brush into Scranton Axis Works ....... he metal of the wheel, and thence Alexander Car Replacer Co... ... wheel remains clean. If, however, a little patch of paper or other insulating material be attached to the periphery at a certain point, every time it comes round it will break the contact between the brush and the wheel, and thus open the circuit. As soon as the patch is past the connection will be re-

This, however, was not the exact plan really pursued. In practice, a long, parrow strip of paper was kept in motion by the wheel, just as a belt is by pulley. This strip had been previousy perforated with holes of different lengths, long or short, and carefully spaced. One brush rested on top of it and the other pressed upward against it from below, the two being removed a short distance from the wheel and ituated one directly above the other. So long as the brushes were separated by the paper strip no current would flow, but when a hole permitted one to reach through and touch the other the current

#### WOULD BE RESTORED.

The interruptions and restorations of the current always occurred at the zero stage, between positive and negative waves, so that no sparkling resulted after the brushes were once adjusted. For convenience, in one experiment, the ends of a short strip were fastened together precisely like belting, and the same message was sent over and over again. An actual speed of 1200 words a minute was secured in this way, and three or four times that rate is said to be entirely feasible.

The precise form of the receiver used on this occasion need not be fully described, because it is not especially preferable to several other well-known ms of automatic receivers. It is sufficient for present purposes to say that the current was led through a coil of wire around an optical instrument known as an "analyzer." A beam of polarized light had been sent from an arc lamp through a series of apparatus of which the analyzer formed a part, and this particular object had been rotated far enough to extinguish the ray when no current was flowing. In accordance with a well-known law, the passage of an electric current "rotated the plane of polarization" in such a way as to permit the light to pass again. A highly sensitive and moving photographic plate beyond, therefore recorded the rapid flashes which re-

#### A Possible Explanation.

#### THE MARKETS.

Wall Street Review. New York, June 3.-Prices on the stock exchange were in full swing upward all along the line today, when Samuel L. Post, jr., an old and popular member of the stock exchange, was seized with heart disease and expired almost immediately on the floor. This visitation of death put an immediate stop to the trading in stocks; and it was not resumed for nearly two hours. The volume of business was, in consequence largely curtailed, many active operators withdrawing from the deal-

ings for the remainder of the day. The London buying was the most potent factor in the market and supplemented by the sympathetic strength
