#### AN EVEN BREAK.

Montreal and the Miners Each Bag One. A Day of Poor Pitching and Poor Fielding.

About six hundred spectators wittessed Scranton and Montreal break even at Athletic park yesterday afternoon. The double-header was the last league exhibition on the home grounds this season. The first game was slowly played and ended in a victory for the home team, the score being 9-5, Becker, the Syracuse amateur, whom

Philadelphia is reported to have bought, pitched the first game and was hit freely, ten singles, a double and a triple being chalked up against him. The game was featureless. In the second contest some lively

fielding and some poor judgment was witnessed. Gunson tried to play left field and several chances were offered him for put-outs, but he could not get under them. Gillon pitched a poor game, hitting several batters and giving many bases on balls. The two double-plays, in which Bonner, Sullivan and Massey figured, were of the star

For Montreal, McNamara led in batting, having three two-baggers and a pitched a better game than the score would indicate. Scranton's four runs were made on a bunching of hits in the third inning.

**GOT THE DECISION** 

Music Hall Last Night.

TOO STRONG FOR THE NEW YORK BOY

McCue Was the Cleverer, out the Odds of Height, Reach and Strength Were Against Him -- Fitzsimmons Had to Do Some Forcing Work to Win--Were Good Two-Handed Men -- Two Preliminary Bouts Were Decided.

an and so-round boxing bout given by the American Sporting club at Music hall last night Hugh Fitzsimmons, of Brooklyn, was given the decision over Marty McCue, of New York city. The bout was very evenly contested. Mc-Cue was clearly the cleverer boxer, but Fitzsimmons forced the fighting and was entitled to the decision.

Two unusually fast 4-round preliminary events were presented. A crowd of about 250 persons saw the sport. Pat Murphy officiated as referee and Eddie Coleman as timekeeper for the club. At 3 o'clock Fitzsimmons and Mc-Cue weighed in at Purcell's bath establishment. Both men were under the limit, 126 pounds. When they entered the ring the Brooklynite appeared to be-and probably was-four or five pounds heavier than his opponent. He also had the best of height and reach. In his corner were Dick Moore, the St. Paul middleweight, and Bartley Mangan and Tony Gordon, of this city. Mc-Cue was handled by Professor James De Forrest, boxing instructor of A. G. Spalding & Co.'s sporting goods house; W. D. Fitzgerald, a friend of the latter, and a theater manager, of Oneonta, N. Y., and Paddy Hopkins, of this

round Fitzsimmons' superior strength began to make itself more manifest than at any time during the bout; he did not, however, wear the New Yorker down. The lat-ter was still jabbing away against rounds McCue was clearly giving evidence of the pace set by his opponent, though the latter apparently had left as much hitting power as ever and was

When Referee Murphy gave Fitzsimmons the decision the latter attempted the customary act of walking to the opposite corner and proffering a hand-shake, but McCue declined to accept the courtesy and made his way through the ropes and out of the ring. The curtain-raiser was a four-round

Altogether the night's entertainment resulted in more than meeting all that had been promised by the American club and its manager, Jack Skelly. The club has yet to present its first questionable bout.

#### BICYCLE GEAR.

Rolla C. Carpenter, the professor of experimental engineering at Cornell univer-sity, whose knowledge as a mechanical expert is well known, and who can be regarded as trustworthy, makes the state-ment that no better power conveyer can be found than the chain which is today in use on the bicycle. This is interesting, especially in view of the fact that indications point toward the introduction of a chainless wheel for next season. Professor Carpenter, in a communication to a newspaper in the town wherein the university is located, makes the following

statements:
"Our investigations are not entirely completed at the present time, but it eems safe to announce that all of the cests indicate that no form of gearing can possibly equal the best chain for efficiency and durability. Some of the results of the tests may be interesting, and it may be briefly stated that the friction with the best chain varied from one-helf to three-quarters of 1 per cent. and this result was not only obtained with a new chain, but was also obtained with a chain which had been in use on a wheel that had been ridden for more than 2000. which had been in use on a wheel that had been ridden for more than 2,000 miles by a rider weighing nearly 200 pounds. This would serve to show that high-grade chains can be and are made which do not change their form by wear an amount sufficient to affect the friction. Tests were made on a large number of other chains, and the friction was found to vary from 2 to 5 per cent., depending upon the construction and details of design. The highest friction we have found, even in the case of an old chain which did not fit the sprocket urcorry, did not exceed in nor sprocket properly, did not exceed 10 per

cent., although I am willing to concede that a considerably higher friction might in some instances be found.

"Regarding the use of gears, extensive investigations have been made from time to time which show the amount of power lost in friction. The very best recorded results with spur geering are very nearly equal to those obtained with the ordinary chain when the gearing is in the best condition and working accurately in line and position. The best kind of bevelor spiral cycle work, show about three times the friction of the spur gears, and since two pairs must be used on each bleycle, about four times as much friction as the ordinary chain will be devel-

ordered and six to eight times as much friction as the ordinary chain will be developed and six to eight times the friction of the very best chains.

"There is another serious objection to the use of gears, arising from the fact that the least change in position of the point of contact of the year from the next. that the least change in position of the point of contact of the gear from its normal will cause a great increase in friction and in loss of power over that stated in the preceding discussion. This indicates that the gearing is essentially unfitted for a frame which must from the very nature of its use possess great elasticity and flexibility. "The chainless wheel also developed one

extremely bad feature, and as this is in-herent in all methods of gearing it may perhaps be worth mentioning. With all the chain wheels the percentage of fric-tion or loss of power remained essentially tion or loss of power remained essentially constant at all speeds, but with a geared or chainless wheel the percentage of fric-tion increased as the speed diminished. This would make the chainless wheel very objectionable for climbing hills, since at that time the speed must be slow and all the power of the rider is needed to propel the wheel forward."

Michael Brenks the Record. Detroit, Sept. 2.-Jimmy Michael broke the American hour paced record this afternoon on the Detroit Cycle association track. Michael's fastest mile was made in 1.48. At the end of the hour he had covered 32 miles and 102 yards, one mile better than the previous record.
