BURGLARY ON CEMETERY STREET

The house of Jonathan Dawson, on New Cemetery street, was entered by burglars early on Thursday morning. They obtained fifty dollars in money and goods worth about ten dollars. Entrance was gained through a cellar window, and then the thieves, taking a lamp that had been left lighted, went through various rooms and carried The money was away their booty. taken from a drawer of the cup-board in the kitchen. The men belonging to the family work in the Delaware and Hudson mines, and had received their pay the day before the robbery. That night the family were absent until early Thursday morning, attending a wedding. And all was safe when they returned. The question arises was the robbery the work of those who knew the circumstances, or did hungry tramps break through and steal? A large quantity of food was missing in the morning. The less will be felt by the family as nearly a month's earnings were stolen.

CRYSTAL LAKE.

B. F. Williams, formerly of the Wall street hotel, in this city, will have charge of the Crystal Lake house next season. The cottages erected by Mr. Whitmore near the Lake house, are whitmore near the Lake house house finds who attended the event were: now finished and will soon be offered for sale. Dr. Graves, of Jermyn, is having a cottage built, which will be having a cottage built, which will be Mr. and Mrs. J. C. Neiman and Misses one of the most attractive at the lake. Fannie Holland. Catarrh Writers.

Distinguished Writers Agrae On Soma Practical Points.

Are the Nerves Involved in Ca-

S. B. HARTMAN, M. D.

President Surgical Hotel, Columbus, O. specialists on chronic catarrh in this country are the editor of "Modern Medicine," and Dr. Hartman, of Columbus, Ohio. They are both prolific writers, and their opinions are quoted in thousands of newspapers; and their publications, especially in pamphlet form, are to be found in every hamlet and city in the United States.

The editor of "Modern Medicine" re ceived special training in Vienna and Berlin, and has stood for the surgical treatment of chronic catarrh of the nose and throat, holding surgical means, in point of importance, above internal medications; while Dr. Hartman has, for the past forty years, been a persistent advocate of internal medications.

the editor states that, like others of the same school with himself, he had made "extensive use of the actual cautery, the saw, the gouge and the cutting burr for the destruction of the thickened structures within the nasal cayity, and likewise employed powerful astringent drugs, both mineral and vegetable, as a means of reducing socalled catarrhal inflammation. But more extended observation has greatly weakened our faith in the means of the sort mentioned. Temporary re-sults are easily obtained, but the same causes which produced the disease remaining in operation, the former conditions speedily recur.

After several years' trial of the methods referred to, he was led to adopt the following system of dealing with chronic catarrhal affections: Improvement of the patient's vital esistance and general tone by tonic

The application to the affected parts vapor liquid vaseline, on account of the excessive dryness of the mucous membrane.

I believe

"The vapor of pure coal oil alone to counteract and correct the unnatural heat or dryness of the diseased mucous membrane is the only local application I allow. I am pleased to note that the author of "Modern Medicine" is on the right track, and that his vast experience in the treatment of catarrh has confirmed in so great a degree the claims I have been making for the last forty years.

The Doctor replied: "Again I agree with the author of the article that there is a most intimate relation between the vasa-motor nerve centers and the mucous membrane, which is the seat of chronic catarrh. Dr. Summy, of our surgical staff, has made this subject a special study, and his practical experience in the treatment of cases at the Surgical Hotel, puts him in a positien to speak with authority. I will refer you to him if you wish to pursue these inquiries further."

Accordingly Dr. Summy was visited by the reporter, who asked: "Have yeu any objection to stating for publication your opinion as to some phases of chronic catarrh?"

ever. What do you wish to ask?" anything whatever to do with chronic catarrh. I would like your opinion on

the subject." Dr. Summy replied: "Well, it would seem at first thought, that the nerves have nothing to do with the matter; but, on the contrary, the nerves have everything to do with this subject. The ucous membranes are made up almos entirely of a net-work of capillary blood-vessels. These blood-vessels are provided with elastic coats which allow enough blood to enter them, but also prevent too much blood from entering them. The elasticity of these vessels depends upon nerve force fur-

of nerves. If these nerves become weakened or deranged the capillaries lose their elasticity, too much blood is allowed to enter the mucous mem-branes, and a congestion of the membranes is the result. This congestion is known as catarrh. When long continued it is called chronic catarrh. As soon as the congestion has well established itself much superfluous mucous is secreted by the membranes, which forms a discharge of mucus. This discharge constitutes a constant weaken-

ing drain upon the system. 'First, we have the nerves, which cause flabby capillaries, which in turn cause congested mucous membranes, known as catarrh; and finally produces the weakening discharge. Catarrh is not always produced in this way, but frequently. The circumstances may be exactly reversed.

"There may be, first, a weakening drain, which gives rise to a congested state of the mucous membrane, which

finally causes derangement of the vasa-motor system of nerves, eading up to a condition of nervousness and ven hysteria. Or again, the catarrh may be acquired as a result of catchng cold, which tiliy soon de-

range the nervous system, because of the intimate connection between the nervous system and the capillary blood-vessels. Therefore, it is a fact never to be forgotten, that no one can have catarrh long without being in danger of becoming nervous (even nervous prostration), nor can any one have weak nerves any length of time without being in danger of acquiring hronic catarrh, as the direct result of weakness of the vasa-motor system of nerves. The weak nerves may be the cause and the catarrh the effect, or vice versa, the catarrh may be the cause and the weak nerves the effect Let us ask ourselves again, then, wha have weak nerves to do with catarrh? Our reply would be: Weak nerves have very much to do with chronic catarrh. They may be the cause or the effect; but they are very sure to be one or the other.

"Does this answer your question sat sfactorily?"

"Entirely so," the reporter replied am sure you have made the subject plain that any one could understand t. Now I would like to have you tell me what your internal treatment for chronic catarrh is at the Surgica Hotel."

The Doctor replied: "Oh, I suppos t is already well known that we use Pe-ru-na as our principal If not sole nternal treatment for chronic catarrh We have come to think that little elsut Pe-ru-na is needed in any case of chronic catarrh, unless some organichange has become involved in the disased process,"

The reporter asked: "But what is this remedy Pe-ru-na, Doctor? Is it a sanacea for all the ills of life or what? The doctor replied: "I would prefer to have Dr. Foster of our medical staff enswer that question for you. It is more directly in line with his depart-

The questions was repeated to Dr Foster, who answered: "No, sir: Peu-na is not a cure-all. Nothing of the sort is claimed for it; indeed there is no such medicine. Pe-ru-na cures catarrh wherever located in the body by the specific action on the vasanotor system of nerves. These nerves control every blood-vessel of the body

which is allowed to pass through them. A congestion means too much blood. Anaemia means too little blood Either of these conditions Permana will care simply be cause it regulates the functions of these

Congestion of the blood-yessets leads directly to that most unlversal disease known as chronic catarrh; and it is through this source that it effects its cures in all catarrhal liceases whose name is legion, but whose nature is one. In restoring these erves to their function, Pe-ru-na, therefore, is beneficial in all cases of regular or insufficient circulation of he blood. In its power to restore these nerves to their proper vigor it happens, incidentally, that Pe-ru-na ures chronic malaria. This is because malarial poison uniformly results in destroying the function of these nerves. Put the action of Pe-ru-na is a single one, although its curative effects are exerted in many conditions of the body which have been called different names. It is claimed for Pe-ru-na only that it restores the efficient action f the vasa-motor system of nerves This is all it will do. This is all that we claim it will do. But we insist that if it is taken persistently and accordng to directions, that it will do this, But in doing this what a vast multitude of disorders is mit!gated, not be cause Pe-ru-na is a cure-all, but hecause so many maladies depend upon a single cause. Pe-ru-na is single in its

"As to revulsive treatment, we use only cold, salt water as a gargle. This application, gargled in the peculiar way described in our books, will effectually prevent catching cold. The day has certainly come when catarrh can not only be cured, but entirely prevented.
