the Scranton Tribune

Published Dally, Except Sunday, by the Tribune Publishing Company, at Fifty Cents e Month.

New York Office: 150 Nassau St., S. S. VREELAND, Fole Agent for Foreign Advertising.

INTERED AT THE POSTOFFICE AT SCEANTON, PA, AS SECOND-CLASS MAIL MATTER.

TEN PAGES.

SCRANTON, MAY 10, 1899.

An accident to a form at a late hour caused the omission from yesterday's Tribune of several columns of news and advertising matter.

The Larger Lesson.

Laying aside all personal issues and features connected with the now completed war investigation, concerning which public opinion is bound to differ on lines of individual predeliction or bias, what is the large lesson to be learned from the disclosures of the past few months and what is to be done about it? We reprint in another column a very timely article from the Philadelphia Inquirer which expresses a policy upon which there can be gen-Philadelphia Press of yesterday, which due proportion of the gain.

General Miles is on record with the assertion that his duty is done. In a in causing a better public understandperfected, nava, officers will be more ers, they will be engineers as well, trained not only to lead charges, but lean battle line. also to attend properly to the infinite details of camp life and transportation and commissary experts as well as strategists and fighters. A flexible general staff must be provided, corresponding to the rotating system of employment provided in the navy, whereby commanding officials are put in touch with all the branches of the naval service. Other countries have already learned this lesson. America's tuition has been costly, but for that very reason it should not be in vain.

Admirai Dewey will give a new proof of bravery in facing the receptions that await him at home.

The Speakership.

The only Pennsylvania newspaper we have so for seen which openly opposes the election of a Pennsylvanian to the speakership is Congressman Connell's Scranton Tribune, and it is quite frank in saying that Mr. Quay would be foolish not to sacrifice the state or make any possible trade on the speakership that will help him to break into the senate on the governor's appointment. senate on the governor's appointment.-Philadelphia Press.

We do not oppose the election of a Pennsylvanian to the speakership for the very good reason that no Pennsylvanian is declaratively a candidate for that office. The Press, for obvious reasons, is trying to manufacture a speakership boom for Congressman Dalzell; but we have not discovered that it has Mr. Dalzell's consent for this emergency use of him as a factional property. If it has; if the representative from Pitisburg is content to be thrown about in the guise of a dummy candidate for this, that and the other office-now receiving Pyrrhic support for the senatorship after having fought the regular party nomines and anon filling in another factional gap as a bargain counter newspaper offering on the altar of ineffective political insurrection-that is his affair. The fact that he is thus continually

The president and secretary of war evidently did not take kindly to the of troops. They must be sanitarians patriotic demands of the Populist governor of Colorado; at all events they have returned no answer and this unterrified executive threatens, if they don't soon pay proper respect to his office, to take the subject into the courts. As a Populist he is of course opposed to "government by injunction," but nevertheless, unless he is speedily mollified he will ask the United States Supreme court for an injunction restraining the president and sechave a real, good chance for some first class interpretation of the Constitution. For educational purposes it is to be hoped that the Populist governor of Colorado will execute his threat.

The returned sailors who fought under Admiral Dewey are unanimous in the opinion that the admiral could not be induced under any circumstances to accept a nomination for the presidency. They are probably right, Dewey realizes better than any one else that he now occupies a unique position as a naval commander in history and does not propose to have his bright escutcheon become a target for the missiles of abuse that would be directed at a presidential candidate.

Exploring Under Difficulties.

Captain Thomas, of the steamer Coya, recently arrived at New York from Montevideo, reports having had at the latter city a talk with Dr. Frederick Cook, of the Belgica Antarctic expedition. Dr. Cook told Captain Thomas that the expedition had got as far South as Alexander I island. It tried to go further southward but the Belgica, when some distance out, got stuck in an ice floe.

"For twelve long months," says Captain Thomas, "they stuck there, driftused for mischief-making purposes ing about over the Antarctic ocean in would, if he were seriously a candidate the middle of an ice field that extended for speaker, constitute a barrier to his as far as they could see. They drift- with tolerable accuracy, the kinds of availability. Speakers are not chos- ed in all sorts of directions. During rations that are most acceptable. That en because of their efforts to disrupt the twelve months they were in this the party to which they nominally be- ice field, Dr. Cook said, they had seventy days of absolute darkness, during which they could do nothing except comment, it makes the mistake of as- stay on the ship and try to amuse suming that Mr. Dalzell and his fol- themselves in any way they could. The lowing constitute the state. Senator weather at times was terrific. Dr. Quay would no doubt be fully justified Cook said that the weather at Cape in refusing to aid the Dalzell move- Horn in its stormiest times wasn't a ment, for it is both lusincere and im- patch on the weather those men went possible. But he would not be justified through on that fee floe in the Antare-

Fortunately, the ship's tarder was well stocked with canned goods, and a feel uneasy on this point that even if fresh meat supply was close at hand in John Dalzell does not fare better as a the shape of seals and penguins. Dr. candidate for speaker than he fared as Cook is now on his way homeward. the marionette insurgent candidate for When he gets here the public will senator Pennsylvania will continue to learn more about the scuthern polar be well cared for in congress and the regions; and it may then better decide whether the polar exploration game is worth the candle.

A four days' conference of representative students of economic and sociai problems is to be held in Chicago sometime during the summer for the purpose of studying the subject of "The idea." say the Times Herald, "will be simply to get light on the matter; to learn what a trust really is; to find out how it affects labor; how it affects prices of goods, and whether it is beneficial or injurlous to the industrial fabric of this country." The intention is to devote one day to railroad combinations, one to labor organizations, one to industrial combinations, and one to compdies and methods of procedure. One of the most important questions to be discussed will be that involving the jurisdiction of the various states and the federal government in the disposition of trusts. The courts have leld both ways, and if light is needed on any point the investigators of the trust say it is on this one. For this reason the governors and attorneys general of all states will be asked to give their views. Leading corporation lawyers and professors of political economy are also expected. The proceedings of such a conference should be both interesting and instructive.

The new municipal administration of Macomb, Ill., is in the threes of a reform movement. The sale of Sunday papers has been stopped and drug store prescriptions must hereafter be filled on Saturday night. Already the efforts of the new mayor to enforce the laws are meeting with much opposition and the ambitious executive has troubles of his own. The Macomb case will doubtless be a repetition of the old, old story and the mayor who has attempted to satisfy the public demand for purification will retire from office a wiser and more disgusted man. Reform is all right as a subject to be discussed in a vein of criticism, or to be applied to the other fellow who is largely in the minority, but when it begins to enforce selfdenial upon some of the leading citizens reform auddenly becomes the unpopular tyranny of a crank official.

Those who imagine that the president's Philippine policy is unpopular

They now have the anti-anti-expansionists in Chicago.

The Army Inquiry and Its Lesson.

From the Philadelphia Inquirer. PRESUME that no war was ever yet conducted without serlous criticism, and it was impossible to hope to escape from inquiries and investigations con-our war with Spain. The report "Well, what of that ourt of inquiry organized by the and suggested that h standpoints. Those who believe that forces in Cuba were fed on embaimed beef will denounce the report for not sustaining Miles. Those who have been chasing Alger will find little in the report that will satisfy them.

And yet on the whole what could 'he On the other hand the much-talked of fresh canned beef while it was of the quality sold to the general public, was not fitted for extensive use in Cuba. 10 was practically an untried ration, and the purchase by Commissary General Eagan of seven million pounds of an ar-ticle of diet unfamiliar to the soldiers is declared to have been a colossal error for which there is no paliation. The court finds that the methods for trans-porting beef were faulty; that the meawas handled too slowly when landed, and that the men had no knowledge of how to use the canned stuff. The climate was against this particular ration, but it would have been palatable had it been cooked with fresh vegetables.

In considering the circumstances it is necessary to take into consideration the fact that we were wholly unprepared for retary of war from further use of the war when hostilities broke out. There Colorado volunteers, and then we can were about 25,000 men in the regular army. In a few weeks we had more than doubled that army and added 290,000 volunteers. The machinery for taking care of such a vast body of men was notoriously defective. We had not had a war on our hands for more than thirty work and the war department and the cars, and the war department and the reaus connected with it were sudden-called upon to face a problem for the solution of which they were unprepared. This fact unquestionably was the one great trouble, and it is a trouble that never should be permitted to occus again. The volunteers, with some notable exceptions, had had no experience in the hypothesis of real camp life. Many n the hardships of real camp life. of the hardships of real camp life. Many of the regiments had been play soldiers, useful principally on holiday occasions, and yet the men who went to war or went into camp were, as a rule, men of intelligence and of bravery. We have heard no reports of embalance beef and the reservations, from the Philippines, and poor rations from the Philippines, and the manner in which that army has been handled has met with nothing but popul lar applause. The experience of Manila has proved that there are no better solliers anywhere than are our volunteer Had we had transports in sufficient numbers fitted for the carrying of proper provisions, and had red tape given away practical common sense everywhere there would have been no sad stories from either Santlago or Porto Rico. It was lack of knowledge, we say, that was the root of the evil.

And how can this evil be remedied? Only through the erention of a general staff, formed on the plan of the staffs of the European armies. The report of the court of inquiry has much to of the climatic corditions in the indies. Our men are still in those islnds, and the same elimatic conditions re present now and will continue to be ent as long as we maintain armic of occupancy. We ought to learn, then, with tolerable accuracy, the kinds of would be one great point gained. The mond during the war was for off-cers grounded in sanitary science-officers who could protect their men from diacase, keep the camps free from contagion, and trach the troops how to prepare nourishing meals. This can be pare nourishing meals. This can be learned only through experience, and a general staff will give that experience. Officers should be detailed to serve a certain length of time. They should learn how to handle large sodies of men, how to trarsport them, provide fond for them, and to overcome scotlem of warm climates. Only

a general staff shall be the result of this court of inquiry, the investiga-tion will not have been made in vain.

THE LIFE SAVING SERVICE.

From the Philadelphia Ledger.

The history of the Life Saving Service is an unbroken record of pure herotsm, noble achievements and practical utility. Yet, until within the last year or two there was no branch of the government more poorly paid or which was given less consideration. Happily, much of the old injustice to the brave men who devote their lives to the saving of human beings and of property is now a record of the past, although there are yet many things which might be done for their comfort as d betterment which are neglected. It is not every man with ordinary health and strength who can enter the Life Saving Service. sition requires peculiar qualifications. An applicant must not only pass a very rigid physical and medical examina-tion, but he must also have had at least three years' experience as a surfman, three years' experience as a surman, sallor or beatman, and possess more than the usual amount of courage, strength and physical endurance. A member of the Life Saving Service must look upon his own life as secondary to the lives of these he may be called upon to save and to be risked without hesitation in behalf or imperfed property.

tion in behalf of imperiled property.

The report of the service for 1898 is gratifying presentment of the work ac-complished for the year, and the record exhibited is a powerful argument for unstinted financial support by the gov-ernment. The year was one of unusual disaster at sea, there being no less than 767 serious casualties to vessels of all classes, 402 of which were regularly documented. This was the greatest documented. This was the greatest number by more than half a hundred of any year in the history of the Life Saving Service. Notwithstanding this, the loss of life was considerably less in proportion than ever before, and the great value of the service is emphasized by the further figures, which show that the total value of the vessels and car-goes was \$7.168,330, and the number of people whose lives were imperiled was 2,987. Of the property, \$6,410,530, or with-in \$757,880 of the whole, was saved, and of the people only 22 lost their lives. The greater part of this vast rescue of property was entirely by the Life Sav-ing Service, although a considerable portion was through salvage companies working in conjunction with it. The Life Saving Service, indeed, does not claim that all lives and property involved in shipwreck and casualties on water would have been lost without its aid; but it is an indisputable fact that without the heroism and intelligent work of the men in that branch of the government employ the sacrifice of both would have been enormous.

From November, 1871, until June, 1898. there were 10.448 disasters to vessels valued at \$113,346,275, having cargoes worth \$47,839,149 and over \$1,099 persons on board. The property saved amount-ed to \$125,600,262, and only 845 lives were lost, and of this number 85 were through the wreck of the Metropolis, in 1877. These are only some of the material benefits rendered by the Life Saving Service. There are yet to be added many for which direct figures and statements cannot be given, and which are con-stantly a part of the work of this valuable branch of the government. The millions of dollars' worth of property saved and the hundreds of lives preserved annually cost the government little more than \$1,500,000 a year. If it cost five times as much to maintain the service, the money would be well ex-

of one of the great Philadelphia newspapers. I remarked that his duties must be tiresome and difficult from being obliged to write down notes of what so many different persons said and, therefore, compelled to accustom himself to all sorts of articulation. "Yes," was his reply, "very few people replied the exacting labor such a position entails. A clear head is absolutely necessary and the least illness often position entails. A clear lead is above the seriously affects the correct performance of my work. For instance, I at one time suffered from a stomach trouble brought on. I suppose, by eating cold lunches hastily, as is necessary with me, and I finally felt that the trouble would break me up. You know a disordered stomach is invariably the root of any head trouble and of all things a stenographer's head must be clear. I finally found an effective remedy in RIPANS TABULES which I saw advertised in our paper. They are magical in their effects, and, by the way, did you ever see anything of the sort put up in such superb shape? I have found that they seem to rectify nearly every ill, for several of my friends have taken my prescription of a Tabule now and then with results for which they have heartily thanked me. The dull, heavy headaches I sometimes had are all gone now. If I take dictation from a man who annoys me and makes me nervous I always take a Tabule at the time, and if his breath is not sweet I give one to him."
