mats, too, are not provided with the means to enable them to maintain an appearance in agreeable comparison with that of the representatives of are drawn by the scholars on the black- ger. other nations; and the president is concerned every four years with the task of finding not so much competent | the hand, so that the entire arm is in as wealthy men to represent us at the capitals of Europe. Scientists in the government employ are notoriously underpaid. Some very eminent men have been engaged in work for the government, and their salaries have not been greater than those of chiefs of division-men of whom no technical or even business knowledge is reboth hands equally in the task. But, on the other hand, the commoner

occupations in the government service command pay which is out of all proportion to that allowed for similar work in the business world. Stenographers who would receive at the most \$75 a month in business houses, draw \$1,400 from the government; and \$\$40 is paid to clerks whose sole occupation is the writing of addresses on envelopeswork which would be done in a business office by boys at \$3 to \$5 a week. Clerks engaged in making entries in books, who would not rank higher than second assistant bookkeepers in commercial establishments, receive \$1,400 or more a year-greater compensation by 40 or 50 per cent, than they could obtain from other employers. In fact, it may be said, conservatively, that the government pays for its ordinary clerical help at least one-third more than any other employer would pay. At the same time, it receives from its employes only 614 hours of service each day: and the work done by each in an hour averages for below similar work done

by clerks in other places, . Yet the clerks of the departments are so improvident that it is necessary for part of their number to petition congress for a civil-pension list, to be maintained through assessments on the salaries of those in the service. Undoubtedly under these conditions a reduction in salaries would work a tem-55 38 porary hardship to those who have be-55 38 come accustomed to living up to the limit of too-bountiful salarles; and at 55 38 the same time a horizontal cut would 55 33 work an injustice to men and women in many of the departments who are now 55 38 underpaid. A far more sensible ar-55 38 rangement would be a readjustment of salaries and a gradual reduction of 55 38 those which appear excessive in com-55 38 parison with the pay given for similar work by other employers. 55 38

If the government did not pay more 55 38 for its work than any other employer 35.38 president would not be bothered the half to death by the importunities of 55 58 office-reckers. 55 38

LEFT-HANDED DEVELOPMENT.

School Children in Germany Becoming Ambidextrous.

From the London Times. Left-handed facility among the school children is a subject that is receiving much serious attention from the school authorities in Germany, with a view to developing both hands and arms equally while the children are young. They argue that the right hand has been so solely developed that many efforts which might easily be delegated to the left hand are undertaken by the right. The smallest objects, as a rule, are picked up by the right hand. Such one-sided movements, repeated constantly, have their influence on the entire system, and are not conducive to the symmetry of the body.

boards, first with the one hand and then with the other, without bracing action. The superiority of Japanese drawing can probably be traced to the custom of that land to make the children practice painting and drawing without the use of any stick or supporting device for the hand. They are taught to draw at the same time they are taught to write the letters of their alphabet, and they are taught to use

> VALUABLE WALKING STICKS. Interesting Historical Facts About Some Famous High-Priced Canes.

From Tid-Bits. In a hairdresser's window at the health resort of La Bourbolue some little time ago an ugly, ungainly cudgel worth about sixpence was displayed, together with the notice: "A stick of genuine olive wood from Jerusalem. It formerly belonged to Pontius Pilate in the year 27 of our era. Price, 7000 francs." Any one desirous of wasting a little time might have asked the vendor for proofs of his veracity, but we, having duly recorded the existence of this remarkable stick, will pass on to that of Dr. H. Hale, of Detroit, which is, to the best of our belief, the most valuable stick extant.

It was formerly the practice of physicians, as old prints prove, to carry canes in the hollow heads of which some disinfectant was placed, which the doctor smelled through perforations in the gold top; Dr. Hale's fam-

ous staff, however, boasts of a head containing a fine chronometer, and is, with its jewelled ornaments, worth about £500. It is somewhat of a coincidence that

two of her majesty's most famous walking sticks should be intimately connected with the Stuart regime, but such is the case. The staff of the stick she habitually uses, we learn, is of stout English oak and was made for and presented to Charles II by a loyal subject at Worcester, the wood being culled from the branch of the famous tree whose leafy boughs gave the wandering king shelter from the Cromwellian soldiery. The original head of gold was removed some time ago and replaced by an ornament taken

better grip. The Prince of Wales, who possesses no fewer than 172 walking sticks, is obviously also a collector, but we very much doubt whether he possesses a more interesting specimen than that

purchased at the Culloden sale by hor majesty the queen in July, 1897. The majesty the queen in July, 1897. The Write this down where you'll fall over stick in question was made of hazel it every day. The time to draw busias to represent Wisdom and Folly, but not when you have more

. . .

fact that it was once the property of

"Bonnie Prince Charlie." Her majesty became its owner by an outlay of £160. A stick of more than ordinary interest is one fashioned from an oar belonging to one of the most famous yessels of this half century, the confederate steamer Alabama, that eventually cost this nation some £13500,000. The head is carved to represent Captain Semmes of the Alabama; below

the bust is a dog symbolical of Mr. John Lancaster's yacht, the Deerhound, through whose agency many of the The habit of people to carry children Alabama's crew were saved when the I nius .- Judge.

rngrens. Exercises that require the effort of where some kind of festivities were the entire arm are urged by the Ger- to be held that night, and that he could man educational officials. Large circles | probably be induced to take a passen-He knew the road, and Sangstrund would run less risk of losing himself in the storm.

The arrangement was easily made, and the two started to learn the nature of the entertainment. Nelson was going to attend, but the latter was uncommunicative and the subject was dropped.

Five or six miles outside of town they passed Dahlin struggling through the snow drifts alone. Sangstrund fairly hugged himself with joy. He was less pleased when he reached the Thorngrens to find a Norwegian minister waiting to marry Nelson and Gerda. The latter was delighted to have him present as a guest, but evidently had no idea of throwing her new lover over for the old one. Dahlin did not arrive until after the ceremony had been performed. He was so angry that he returned the same night to Emery and thence to New York. Sangstrund took his defeat philosophically and stayed to dance at the wedding and wish the newly married couple good luck. He is still in Emery and will, it is said, soon take his former sweetheart's sister Helma home as a wife.

STRANGE WAYS OF ADVER-TISERS.

There's nothing on earth so mysteriously funny as an advertisement. The

prime first and last object of an ad is to draw custom. It was not, and never will be, designed for any other purpose. So the merchant waits till the busy season comes, and his store is so full of customers that he can't get his hat off, and then rushes off to the printer and goes in for advertising, When the dull season gets along and there is no buying, and he wants to sell his goods so bad he cannot pay his rent, he stops advertising. That is some of them do; but occasionally a level-headed merchant does more of it and scoops in the business, while his neighbors are making nortgages to pay the gas bills. There are times when you couldn't stop people from buying everything in the store if you planted a cannon behind the door, and that's the time when the ad is sent on its holy mission. It makes light work for advertising for a chalk sign on the sidewalk would do all that was needed, and have a half-holiday every day in the week. But who wants to favor an ad? It is built to do hard work, and should be sent out on the dull days, when a customer has to be knocked down with hard facts and kicked insensi-ble with bankrupt reductions, and from Seringapatam at the fall of that dragged in with irresistible slaughter of city, in order to give her majesty a prices, before he will spend a cent. That's the aim and end of advertising, and if you ever open a store don't try to get them to come when they are sticking out

of the windows, but give them your ad right between the cres in the dull season, and you will wax rich, and own a fast horse, and perhaps be able to smoke a eigar once, or twice a year,

wood, and the head was fashioned so ness is when you want business, and business than the special interest it possesses is the you can attend to .- John Wanamaker.
