

EVENTS OF DAY IN WEST SCRANTON

PROPOSED TIN PLATE INDUSTRY CAN BE SECURED.

Options on Two Desirable Sites Already Obtained and Stock Can Be Purchased in Small Blocks—St. John's Fair Reopened in the Church—Mrs. Stewart Entertains the Children—Funeral Announcements, Coming Events, Bicycle Accident, Japanese Tea.

The proposed tin plate industry, which the Scranton board of trade has endorsed, can be secured for West Scranton if sufficient interest is manifested in the concern. It is understood that two options have been secured on land in the Keyser Valley section, one from the Delaware, Lackawanna and Western company and one from John B. Farr. The capital stock of the company will be fixed at \$200,000 and \$30,000 of this will be subscribed by the promoter, L. K. Torbet, of Chicago, and Mr. Patton, his manager.

The remainder of the capital stock will be raised by popular subscription from one share up, giving the small investor an equal chance with the capitalist. Of the amount to be raised \$165,000 will be expended in building the plant and purchasing machinery and \$35,000 will be used as working capital. The industry will employ about 400 men and, as there is nothing of its kind within a radius of several hundred miles, there is little doubt in the minds of the promoters that the plant will be a success from the start. The superior advantages of West Scranton as an industrial center have been referred to on many occasions, and if the money men of this side are anxious to boom it, here is an excellent opportunity. The West Side board of trade has been clamoring for industry for several years, but the majority of the members are not capitalists and, while many of them may be sufficiently interested in a tin plate industry to subscribe for a few shares of stock, it will require much more money than can be raised in the local board of trade to insure the industry.

The proposed sites are on the line of the Delaware, Lackawanna and Western railroad and within easy reach of either the Washburn, Lafayette or North Main avenues street car lines. The land is also in close proximity to the plots recently opened by the West Park Land company and Mr. Farr, and would make an ideal place for such an industry as the tin plate plant.

It is to be hoped that the people of means residing on this side will become sufficiently interested in the enterprise to secure it, and thus give

Exciting Runaway Yesterday. Little Girl Injured—Kraye-Spohrer Wedding.

What might have been a fatal accident occurred on this side yesterday morning.

A horse belonging to Herman Krug, an agent dealing in patent steam cooking utensils, took fright while standing on Irving avenue and ran away.

On this street a little girl, whose name could not be learned, was thrown to the ground and the wheels of the carriage, to which the frightened animal was attached, passed over her, injuring her seriously.

The horse continued its mad flight until it reached Hickory street and Prospect avenue, and after jumping over a wagon owned by farmer Spencer, of Elmville, was captured.

Three wheels broken on the farmer's wagon and Krug's carriage was badly demolished. The horse sustained several gashes, but otherwise was apparently unharmed.

KRAYE-SPOHRER NUPTIALS

After the ceremony the bridal party partook of a wedding breakfast at the home of the bride's parents, at 21 Maple street.

After dinner they enjoyed a trip to Wilkes-Barre and last evening a reception was held at the home of the bride's parents.

Tomorrow evening the Primitive Social club will conduct its fifth annual masquerade ball at Shover's hall, on Penn avenue. This club was organized for social purposes about five years ago and is one of the most popular social organizations in the city.

HOW DIMES ARE MADE

The Process as Carried Out at the Mint. From the Philadelphia Times.

In making the little pieces of silver money commonly called dimes the silver bullion is first melted and run into bars that weigh two pounds each. These bars are then run between great rollers and are thus flattened into strips of the thickness required for dime-making.

The strips, after having been treated with a glaze of fine preparation to keep them from being scratched are put through a machine that cuts them into the proper size. The pieces thus prepared are put into the feeder of the printing presses and they go to the
