Miss Lockheart's LETTER TO MRS. PINKHAM.

[LETTER TO MES. PINEWAM NO. 67,104] "I cannot express my gratitude to

you for the good that Lydia E. Pinkham's Vegetable Compound has done for me. I have taken five bottles of the Compound and two boxes of Liver Pills and feel better in every respect. I had suffered for years with dropsy; the veins in my limbs burst, caused from the pressure of the water. I had the worst kind of kidney trouble, fainting spells, and I could not stand long at a time. I also had female weakness and the doctor said there was a tumor in my left side. The pains I had to stand were something dreadful. A friend handed me a little book of yours,

so I got your medicine and it has saved my life. I felt better from the first bottle. The bloating and the tumors have all gone and I do not suffer any pain. I am still using the Vegetable Compound and hope others may find relief as I have done from its use."-MISS N. J. LOCKHEART, BOX 16, ELIZA-BETH, PA. Only the women who have suffered

with female troubles can fully appreciate the gratitude of those who have been restored to health. Mrs. Pinkham responds quickly and

without charge to all letters from suffering women. Her address is Lynn, Mass.

open their week's engagement at the Academy of Music tonight in "The Woman in Black." "The Woman in Elack" gives some new and vivid pic tures of metropolitan life which will prove of more than passing interest to the average patron of the playhouse. The story has a semi-political color-

ing in it that it has to do with the two rival candidates for congressional honors, and it gives an excellent idea of the methods used in a keen political fight between opposing factions. But the political element in the play is subordinated to a strong story of

MONTANA'S ICE MINE.

ter and Keeps It in Summer. Messrs, Donne and Prendergast

> Seven miles to the north and a little agency in Custer county, Mon., is a well filled with ice that excites much cattlemen of that section. Every cowboy who visits the well has much to tell and invariably advances his own explanation. Many ingenious theories given which tend to indicate that mankind of all degrees of scientific knowledge put forth an effort to find the origin of things; however, they all agree that the ice forms in the well during the summer and that it actually thaws during the winter. This apparent contradiction of the natural

laws that govern the outside world has carried the fame of this well for miles around and people have traveled great distances to witness the formation of icicles during the hot weather

This well is within a few hundred Mountains, on the north slope, at the very beginning of Greenleaf Creek,

for many feet below the surface, being moistened by the winter snow and rain as it may fall and run down from above

During the winter the well is nearly filled with snow; enough water from the early spring rains finds its way through between the rocks to mix with the snow and freeze into one solid mass of ice. The ice in the well is formed by does not begin to form sometimes till the winter is half gone. In turn, it is melted by the heat of the summer, but does not begin to melt until the summer is half over. In the early part of the summer it is still freezing in the well and during the first half of the winter it is still melting. The well acts as a refrigerator. It receives the heat slowly and then gives it off just as slowly. If the earth received and gave the heat readily the hottest

weather would be in June and the coldest in December-in fact, the seasons follow nearly a month behind the sun The conditions surrounding the ice well cause it to follow the seasons from six to eight weeks later. Those visiting the well during the first half of the

winter find water and those visiting during the early summer find it still freezing, even finding small icicles forming as the water, coming from above, drips over the rocks on the sides

down near the ice. It is a fact that if on a hot day you walk rapidly into the cave to where the ice is, it feels as though a strong current of cold air were blowing against your face. The sensation is so decidedly real that it requires careful demonstration to prove to the contrary, and even then it almost seems as though

the demonstration has been a mistake It can be easily tested by using smok? or, better still, a rather heavy colored

glass. Again, if one should stand without the entrance to the cave on a very warm day, near enough to feel any draught that may be stirring, none can be felt coming from the cave. If one should stand directly above the ice

well on a hot, still day, even putting the face down to the very opening into the well, no unward draught of cool air can be felt; but go down into the well and one would state positively that there was an upward draught of extremely cold air.

Cannot Be Made from It.

One of the most interesting and atractive exhibits at the Vienna exposition of last year was a building conto the east of the Cheyenne Indian taining the most diverse articles made from peat. Everything in the building from the carpets on the floor to the curlosity among the ranchers and curtains at the windows and the paper on the wall, had been made from peat These were but representatives of what will undoubtedly soon become a great industry and give to the peat bogs of the world a value never before dreamed of.

Credit for the discovery of the possibilities of peat belongs chiefly to a Vienna gentleman, Herr Karl A. Zschorner. His investigations into its nature began some twelve years ago with a study by means of the microscope of what is called in Austria "torfstreu." This is the layer of moss which overs the surface of most peat bogs It has hitherto, by those who have made use of the peat for fuel, been at considerable expense removed and

thrown away. Herr Zschorner's examination showed that the plant refeet of the summit of the Little Wolf mains which make up this layer abound in hollow, spiral cells. These absorb water and other fluids with great avid-

grasses, which, growing and dying in

successive generations, form the peat

Herr shaft; at fifteen feet it was disagree- Zschorner accordingly hit upon the idea ably cold; at twenty feet the cold had of drying the straw and using it as ar increased so rapidly that they were absorbent in stables, breweries and thoroughly frightened. They could various manufactories. For such pur-feel currents of cold air rushing up pose it proved most admirably adapted. from the crevices in the rock; they and the demand for the product soon grew large. Having greater absorpimagined they were digging into some tive power than ordinary straw, the mysterious underground cavern: they had heard just enough of wonderful peat straw can be used much longer in any given place, and yet will have dventures of digging into caves and underground lakes, and being alone in proportionally greater manurial value this wilderness, where the very still-It gives a healthy, resilient footing also for animals. For packing of both ness permitted the ears to hear and the mind to imagine all manner of perishable and breakable articles I also better than ordinary straw, gruesome powers hid beneath the rock since it is more elastic and less easily so thoroughly filled them with the penetrated by heat and cold. fear of impending dauger that they abandoned the work which has since Herr Zechorner did not rest his in

gained such renown. The summits of Little Woof Mountains are covered with scoria, which has all the appearance and texture of a good grade of tiling. It is usually red, but varies in color through all the shades down to black. These varying colors give the beautiful tints to the thousands of buttes throughout the bad lands. In comparatively recent geological times vast beds of lignite coal were formed over the eastern half of Montana, extending into western Dakota. The burning of these beds of

coal was the beginning of the bad land formation. The fine deposits of clay above the coal were burned as brick are burned in a klin and formed the scoria. Where the heat was greater and rock and sand were present, it melted and mixed with the coal and coal ash, forming large cinder-like

rocks, which are sometimes mistaken for lava. As the coal burned out from beneath the clay, now baked into A promise of rare enjoyment to the scoria and melted into cinders, it best class of our theater-goers is conbroke into small divisions and fell tained in the announcement that the promiscuously down into the pits thus two representative players of the Lon-

don stage, Mr. and Mrs. Kendal, with ed over the Little Wolf Mountains and a brand-new play, bearing the endorsethe eastern portion of Montana. It ment of a six months' run at London's must have drifted with the wind from leading playhouse, will be seen again Their new play, "The Elder Miss Blossom," is the work of two Eng-

lish playwrights, Messrs, Ernest Henapparently of the same origin as all the drie and Metcalf Wood, and was written especially for them. It is a debad land buttes. Their summits, towcided novelty both in treatment and ering above all the other buttes, have only time will tell. Some of them have dramatic construction. The first act given them the name of mountains, but is a comedy, the second is almost a they are only of slightly over 4,000 feet

Carbondale, Pa., on Monday, the twenty-third day of April. A. D., 1900, at 4 o'clock p. m., for the purpose of nominating one candidate for member of the legislature, and for the election of three delegates to represent said legislative district in state convention to be held at Harrisburg, April 25, A. D., 1900, as well as for the transaction of such other business as shall, be proper. Tigliance committees will hold primary elec-tions on Saturday, the tweety first day of April, 1900, between the bours of 4 and 7 o'clock p. m. Candidates for the offices above named will reg-ister with the scretary in Carbondale, and shall pup their assessments on or before the tenth day of April, 1900, observate the names will not be printed upon the efficiat ballot. J. W. SMITH, Chairman' Attest:--SAMCEI, S. March 27, 1900. FOURTH DISTRICT CONVENTION-UNDER They were found to be very durable, very elastic, to be non-conductors of heat If a fabric could be woven from them it would be one possessing unique properties. To the toughness of linen

a few of the uses to which this remarkable fiber can be put, but they indicate possibilities which may yet rank peat bogs among the most valuable of the world's resources.

It Is Dangerous to Neglect a Cold.

Pneumonia is one of the most dangerous and fatal diseases. It always results from a cold. Chamberlain's Cough Remedy will quickly cure a cold and perhaps prevent an attack of pneumonia. It is in fact made especially for that ailment and has becom famous for its cures over a large part of the civilized world. It counteracts any tendency of a cold toward pneu-monia. Can you afford to neglect your cold when so reliable a remedy can be had for a triffe. For sale by all druggists. Matthews Bros., wholesale and retail agents.
