TRINIDAD'S ASPHALT LAKE.

Twenty Thousand Tons of Increase Bitumen Every Year.

from the Saturday Evening Post, Asphalt is being dug out of the fanous tar lake of Trinidad-the most notable existing source of the material in the world-at the rate of 80,000 tons per annum. There are still 4.500,000 ons in sight, but at this rate the suuply could not last long, were it not that the lake of bitumen referred to is receiving a constant accretion from the bowels of the earth. This accretion is reckoned as amounting to about 20,000 tons yearly, and would suffice to restore the lake to its original condition if it were allowed to remain undisturbed for a few years. This wonderful lake of pitch has an area of 114 acres, and recent soundings made in the middle of it have shown its depth to be 135 feet in that part. Near the center it is semi-liquid and bubbling, but elsewhere it has so hard a surface that a man on horseback can ride over it without danger of breaking through the crust. Scattered over its surface are a number of small islands which have no proper roots in the earth, so to speak, but are composed merely of accumulations of soil, though trees of considerable size grow on some of them. These islands are not stationary, but are carried slowly from place to place by the movements of the lake. Now and then one of them is entirely engulfed.
