# TEN PAGES.

SCRANTON, JANUARY 2, 1901.

The enthusiastic people who have been endeavoring to talk Mr. Quay out of Harrisburg for the past few days are beginning to exhibit symptoms of laryngismal lassitude.

#### The Vaccination Fad.

"Why not vaccinate by force, if necessary?

T IS WELL that the nervous individual who wrote the above is not at large armed with authority that would enable him to start out like a branding-iron expert on a Texas cattle ranch and vaccinate all within reach, whether they desire treatment or not. The hysterical Herald man is no doubt well aware that there are many persons who have little faith in the good results of vaccination; who believe that there is greater danger in the system of treatment once so popular than in the disease which it is calculated to prevent. It is undoubtedly true that in olden times scrofulous diseases have been disseminated by vaccine virus. Now that all reputable physicians use the quills dioped in the bovine product this danger is lessened, yet in view of the increase of tuberculosis among cattle all over the country, there are thousands who would prefer to take a chance with smallpox, which is no longer necessarily a fatal complaint, than to risk innoculation with the most carefully prepared vaccine virus upon the market.

The talk that people should be vaccinated in order to protect their neighbors is all bosh. Vaccination is calculated to make the subject an immune or get his system in condition that will make an attack of smallpox a triffing matter. The worst cases of smallpox can be contracted from light cases of varioloid. The persons who are willing to take chances upon smallpox should not be forced to undergo an operation that they consider more dangerous, under the idea that they are thus insuring the safety of their neigh-

While many will probably view with interest ex-President Cleveland's recent arguments in favor of a change of election methods and a longer term for presidents, there is not likely to be general expression of regret that Mr. Cleveland's last term ended on schednle time.

## Hunt the Kidnappers.

HE ANNOUNCEMENT that the city of Omaha has decided to take a hand in running down the Cudahy kidnappers will no doubt be received with satisfaction everywhere. The second communication received by Mr. Cudahy, in which the writers threatened to steal his other children in case he did not withdraw the offer of \$25 .-000 reward for the capture of the miscreants, no doubt had much to do in arousing the authorities of Omaha to action. The city councils have offered an amount equal to that which Mr. Cudahy agreed to give and have taken the case from his hands entirely There will now be no restraints placed upon the police in the work of hunting the men who succeeded in getting a big ransom from the meat packer and no expense will be spared in the mat-

The case will be regarded with interest in every locality and aid should be granted freely by the public wherever possible in following the slightest clue that promises to lead to the discovery of this band of most nefarious of criminals. The effects of the good work accomplished some time ago in the capture, conviction and imprisonment of the kidnappers of baby Clark, of New York, will be to a certain extent impaired if the Omaha gang is allowed to go unpunished. Brigandage must not be allowed to gain a foothold In this country.

Dignified silence upon the renewed beef controversy on part of General Miles will no doubt win golden opin-

Philanthropy of 1900.

THILE in many lands the past year has been one of turmoil, strife and bloodshed, and at home sharp competition and unusual methods of activity in money-getting have times had tendency to feed the fancies of the chronic pessimist, a bright side of the events of 1900 is presented in this country which the patriotic citizen may contemplate with pride. The year just closed has been a year of philanthropy that leaves no loubt as to the generosity of a goodly number of the fortunate into whose hands a kind Providence has intrusted

the bulk of the wealth of the land. According to data compiled by the Chicago Tribune, the benefactions of the year in this country to educational institutions, libraries, churches, art museums and charities amount to the princely total of \$60,264,030. These figures represent the donations down to

the end of last week, and the total will probably be somewhat increased during the present week. The sum mentioned above only includes gifts of \$1,000 or more in each case, so that if the smaller contributions, together with those of which no records are available, were added, the aggregate would doubtless be many millions

more. As compared with 1898, when the benefactions reached the recordbreaking total of \$79,749,956, the returns for 1900 show a falling off of something like \$19,000,000 or \$20,000,000. But, with the exception of 1899, when the total was \$50,000,000 greater than the average for each of the ten years preceding, the returns for this year are \$32,000,000 greater than those for any former year in our history.

While Philadelphia greeted the new century with an elaborate electrical display, which in some sections caused the heavens to blaze with light, Scranton, the original Electric City, bowed her head under lowered street lamps, which blind the vision of the nocturnal pedestrian and make easier the calling of the skulking thug who waits in the shadows for his victim. This certainly seems one instance of taking a step in the wrong direction.

#### Lake Superior Iron Mines,

HE TREMENDOUS expan-

sion within half a century, of the iron and copper mining industries of the Lake Superior district, says the Philadelphia Record, is one of the most marvelous and momentous industrial events of the century which has just ended-marvelous because of the vast extent of the mineral deposits and the amazing rapidity with which their development has preceeded, and momentous because in the iron ranges around the great lake may already be dimly discerned the seat of industrial empire for many years yet to come. It is the existence of these rich deposits of Bessemer ores and their practical concentration of iron and steel producing interests that have given American machinery and American inventive genius full play in the markets of the world, until now it is admitted on all sides that in the not distant future, the undisputed leadership in iron and steel production, with the mastery over allied industries which the term implies,

will be vested in the United States. The figures of iron ore output from the Lake Superior ranges convey. notwithstanding their magnitude. only a partial and incomplete idea of the volume and significance of production in that quarter. The true meaning of a yearly output of over 19,000,000 tons of Bessemer ores, following upon an average for the past ten years of over 10,000,000 tons annually, is almost beyond comprehension. But it is clear enough that such capacity for adding to the material resources of civilization is without precedent in history, and of enormous weight and value in the account current of the American people with the beneficent genius of progress. The age of steel has dawned fully with the new century, and its triimphs will be won most easily by the purveyors and providers of steel for all nations.

It should be noted, in connection with any survey of this vast iron mining industry, that the rich deposits on the Canadian side of the lake have scarcely been touched as yet. The enormous strides of the giant combinations in this country which have heretofore practically monopolized the output of the district have rendered Canadian capitalists averse to entrance upon a field of industrial effort which seems at the present time to have been preempted by exclusive right. But this sentiment of incapability will sooner or later pass away, and then, unquestionably, will begin Canadian competition with this country in the iron and steel making industry. As the years shall pass and the Old World shall become accustomed to reliance upon trans-atlantic sources for supplies of metallic raw material the play of industrial forces on either side of the chain of great lakes and the St. Lawrence river will constitute a spectacle of absorbing interest to American statesmen and students of national economics.

In view of the enormous annual quirements everywhere for steel of various grades the prospect of an early exhaustion of high grade ores in the Lake Superior field is a matter of general economic concern. Under existing conditions of human activity the demand for steel-and, hence, for high grade iron ores-must constantly increase in even greater ratio than the increase of population. The world of invention is almost feverishly seeking new uses for steel, and every successful device in a large field of human ingenuity is contingent and dependent upon a never failing supply of this product. Should the oft-repeated forccasts of early exhaustion of the Mesaba Bessemer ores be realized it might become necessary to recast the entire industrial horoscope of the iron and steel industry in America during the twentieth century.

The last ambitious critic to come to grief appears to have been Mr. Charles Magee, of Philadelphia, who thought to gain notoriety by becoming iconoclastic over the works of James Russell Lowell. Mr. Magee succeeded in gaining admission to the Congress of Philological and Archeological societies which had been in peaceful session in the Quaker City and attempted to enliven the meeting by reading a paper on "Literary Manners of the Nineteenth Century." The paper was a vicious attack upon the writing of Poet Lowell, formerly president of the societies, whose gems of thought were characterized as "mere babblings," The paper made a hit, but not in the way that was expected. Instead of making indignant protests that would arouse a controversy, the majority of the audience made a stampede for the exits, while those who remained greeted the efforts of the critic with immoderate laughter, and the young man was finally obliged to retire, in confusion. Aside from having his portrait printed in the local papers, Mr. Magee achieved

the congress of thinkers.

The latest citizen to receive attention on account of having lived in three centuries is a woman who halls from Cincinnati and claims to be 123 years old. It is evident from numerous reports from different localities about the country that old people, or liars, are rapidly increasing in num-

The fact that the new emperor of China is only fifteen years of age doubtless accounts for his acceptance of the position. Past experience ought to convince any well-balanced Celestial that official business in the yellow kingdom is more dangerous than foot

Nikola Tesla, the electrical inventor, announces that he will explain a new discovery at a watch-meeting in Chicago tonight. Nikola evidently does not propose to leave anything for the inventors of the twentieth century to accomplish in the line of electricity.

# Outline Studies of Human Nature

The Super's Revenge.

A SUPERNUMERARY in Richard Mansfield's company who had been, to use a Scotch phrase, continuously and continually "neckled" by the manager at rehearsals and between the acts for alleged displays of stubidity on the stage was informed that a near relative of his had departed this life and had left him a competence, so he decided to leave the dramatic pro-fession and, to quote him, become respectable, relates the Chicago Chronicle. Before leaving he etermined to take his revenge on Mansfield for the attacks on his amour propre that gentleman

The play was "Richard III." and the was one of the soldiers who leads away the Duke Buckingham when the king orders his demise In due time Richard remarked: "Off with his ancing, he touched his helmet in the style of a

ootman and replied loudly and genially; We'll take are of old Buck. It'll be all right!" and retired gracefully. When the infuriated Mansfield came off to commit murder he found the super

#### The Cost of a Duke.

A CORLESPONDENT of London M. A. P. tells a story of the Duchess of Montrose, whose beauty is no less renowned than her philan-The scene was a baraar where the ess was selling photographs. One old Scotch woman who was very anxious to secure a photo-graph of the duchess; but the price asked was ive shillings. The old woman hesitated, photograph, but could not well afford so much.

"You can have my husband," said the duchess, ith an amused glance at the duke, standing car, "for two-and-six-pence." The would-be purchaser looked at the duke

and then at his photograph contemptuously, "Half-a-crown!" she blurted out, "I wouldna' give a silver saxpence for him. But," she added asinuatingly, "I am right willing to give hauf-croon for your bonnie sel"." The duchess was unable to resist this, and therself added the o, er half-crown to the bazaar coffers, or, as another version of the story goes, the despised duke proffered the balance.

## Took Him in Tow.

FRANK LINCOLN, the cheery American humor-ist, who has been entertaining Londoners at he Palace, tells a capital story of the compulsory hospitality he once received in one of the western states, relates London M. A. P. Arrivng on a bitterly cold winter day, he was met the station by a grave, long-visaged Scotch eacon. "You'll hae to bide wi' me eplied Mr. Lincoln, knowing by experience the emforts of being "entertained."

'No! A' the lecturers bide wi' me. You're the fourth. The bailiff cam' doon on the first ne for the door siller. The second ane drankwe'll had nad drinkin' here! The third and was seen speakin' to a stranger, a young leddy, on the cars. Noo you look a' right, but we're no to take ony risks. You'll bide wi' me, and I can eep an e'e on you!'

## Then He Spoke Up.

C OUNSEL-I insist on an answer to my ques versation. I want to know everything that passed between you and Mr. Jones on this occasion to which you refer.
Reluctant Witness-I've told you everything of any consequence.

"You have told me that you said to him: Jones, this case will get into the court som day.' Now I want to know what he said in re-

"Well, he said: 'Brown, there isn't anything in this business that I'm ashamed of, and if any snoopin', little, yeehawin', four-by-six, gimlet-eyed lawyer, with half a pound of brains and sixeen pounds of jaw, ever wants to know what I've been talkin' to you about, you can tell him the whole story."-Tit-Bits.

## Greatness Not Appreciated.

66 TACK" WILSON, whose temb is in the Little Cloisters at Westminster Abbey, was n 1673. The inscription on his tomb at the Ab bey was much obliterated, and under the direc-tion of an antiquary a man was employed to recut the latters, says Pearson's Weekly. The antiquary stood looking over him so that he should make no mistake, and to make the time to pleusantly, he dwelt at great length to the verkman upon the grandeur and merits of the leceased. The man eventually stopped his work, looking up at the antiquary, said:

"I wish, sir, that we had known that he was such a swell afore we run that there drain-pipe through him!"

## No Change.

IN A Sheffield workshop, when the men absent-ed themselves, they were expected to produce doctor's certificate. An Irishman, absent, however, on a second oc-casion, and told to bring his certificate, gave in the one used before. The manager, looking at

"Why Magnire, this is an old certificate." "Sure, I know that, your honor," said Ma-cuire, calmly, "And isn't it the same ould

#### "THE WORLD \*\*\*\* ONE HUNDRED YEARS AGO TODAY"メメメメメメ

[Copyright, 1300, by R. E. Hughes, Louis-ville.]

THE FIRST iron tramroad was built in Great Britain from Craydon to Wandsworth, A few months prior to this Mr. Benjamin Out ram (for whom these roads were named, the reviation for Outram to tramroads coming later) had made great improvements in this sys tem of railways for common vehicles, then in use in Northern England.

The first lectures on medicines in England vere delivered. Up to this time forensic mediine seems to have been entiely neglected in he adoption of the methods of research physical science and the gradual declining im portance attached to theory and abstract reasonng-dates from this period also. Hypotheses ough not neglected, were still used as of research rather than as ultimate conclu ions. The growth of the new school was firs een in France and in England.

Corvisort, a French physician, was the first zer's invention of percussion to determine th ize of the heart.

Young's grandest contribution to the wave theory of light, on which is based the whole doctrine of interference, was made in his Baker-ian lecture in England. This was the beginning of that wonderful series of researches which secured the undulatory theory. Young's discov-ery was made by reflecting on the beautiful experiments of Newton. He believed that as law it accounted for a greater variety of inter-esting phenomena than any other optical priniple made known up to that time.

In England one of the first and best things of a century that gave promise of surpassing in every way all its predecessors was the modi-fication of the private inclosure acts, whereby more of the common ground than ever before was brought under cultivation. Increase in population and the growing need for food-producing land made it the interest of the lord as well as the public to utilize the commons.

The country which many years later formed Orange Free State, in South Africa, was now inhabited by sections of aboriginal tribes— Hushmen, Korannes and Bechuanos, and a chronic state of warfare began between them and a number of Griques from the northwest of Cape Colony, who had come among the former.

The development of the resources of the As gentine Republic, so long thwarted, was allowed comparatively free play.

Paris had her second national exposition, the

first having been held three years before. The first year of the century gave to the world nany men and women who ascended high the

ladder of fame. Among the births were
