PNEUMONIA AND CONSUMPTION

Destroyed Fourteen Hundred Lives Daily During the Past Month.

Four-Fifths of These Deaths Due to Carelessness in Selecting Treatment for Coughs, Catarrh and Bronchitis.

THESE DISEASES EASILY PREVENTED.

It would seem that any sensible person, after reading the reports of the Bureau of Vital Statistics published by the government, would think twice before experimenting with remedies and treatments which these reports prove have been practically worthless in curing or preventing Pneumonia and Consumption.

Now, during this whole period, ten years, every drug known which could be taken in the stomach, every germicide which could be employed in sprays, vapors or atomizers, were used, and yet the medical records do not show one single case of Consumption cured.

To be sure, thousands of persons afflicted increased their strength and flesh by stomachic tonics, denuded their cough with strong drugs in form of vapors and sprays, and even gave their testimonials, as cured, to the manufacturers of such treatments; but as statistics prove, the germs of consumption remained in the lungs and death claimed its victim in the end.

Now let us return to the Reports of the Bureau of Vital Statistics, they show that for the first time in history the increase in death from Pneumonia and Consumption stopped in 1897; they show a slight decrease in 1897, in 1898 and 1899 a slight increase, and in 1900 the deaths from these diseases were 25,205 less than in 1899, a fact which brought hope and joy to thousands of physicians who for years had been battling in vain against these terrible scourges.

The question then arose, "What has brought about this wonderful change?" In most cases, where so vital a question is to be decided, there is a diversity of opinion. But in this case, Physicians and the United States Government are agreed, and Health statistics prove that this reduction was due to the use of the new dry air germicide, HYOMEI and sanitolium.

They go still further, and say most emphatically that no other treatment or remedy had anything to do with bringing about this reduction.

To say that HYOMEI cured 25,205 persons of Pneumonia and Consumption does not give it the credit due, for thousands of the victims of these diseases are recruited from persons afflicted with coughs, catarrh and bronchitis, and in order to reduce the death rate from Consumption and Pneumonia 25,205, it must also have cured at least two hundred thousand who had already died of Consumption and Bronchitis.

HYOMEI first came into general use in 1896, and according to statistics furnished by the government, the increase in deaths from Consumption stopped then. Why? Because HYOMEI is the only germicide known which can be inhaled in the air we breathe, and it is through this air alone that the germs causing Consumption, and located entirely in the lungs, can be reached.

Having given the true facts about different treatments, we leave the rest to you.

On the one hand you have stomachic medicines, sprays, vapors, and atomizers, and on the other, HYOMEI, the only germicide permitted by nature to enter the lungs, the endorsement of physicians, the United States Health Reports, a 50 per cent. reduction in the death rate, and a guarantee of refunding your money in every case of failure to cure, WHICH SHALL YOU USE?

HYOMEI is sold by all druggists or sent by mail. Complete Outfit \$1.00. Trial Outfit 25c.

Five days' treatment sent free to any address.
