Wall Paper News for Early Fall Buyers

The important elements in Wall Paper production—color and design—are most beautifully blended in the new patterns for the early Fall Trade.

From the writings of historians we find that in the earliest ages men were pleased with color. In later ages design—the expression of the artistic in man—is noted.

From that time until the present color and design have developed hand in hand. If either is the more essential element it is color.

In selecting interior decorations it is a safe rule to decide on the color first and the design next.

In this season's patterns the designer has been exceedingly consistent and true to his ideal. The day when the "blue rose" and the "pink violet" will pass as artistic floral designing is past.

The fact that the customer of today displays great taste and is severely discriminating, has been constantly kept in mind by the designer of our Early Fall Styles, with the result that the display which now awaits you here is choice and exclusive.
