PITTSBURGH:

THURSDAY MORNING, OCT. 2, 1856

The Sixth Annual Exhibition
OF THE
Pennsylvania State Agricultural Society,
WILL BE HELD AT
PITTSBURGH,
Sept. 30th and Oct. 1st, 2d and 3d, 1856
s24tfah ROBT. C. WALKER, Sec'

The Pennsylvania State Fair.

WEDNESDAY—SECOND DAY.

The weather yesterday was disagreeably cold, but notwithstanding, the turnout of vehicles and visitors was large. Many additional exhibitors were upon the ground with their wares. We continue below our description of the articles on exhibition:

MECHANICS' HALL.

One of the most noticeable features in the Hall, and one that attracted the most attention, is the Sewing Machine of Mr. Robt. Straw, clothier, corner of Market street and Second. It was kept in operation during the entire afternoon, and of course a large crowd was constantly around it. Though several years in operation, the public seem not yet to fully appreciate the immense advantages of the machine. The one we now allude to took a large silver medal and diploma of the Pennsylvania State Fair held last year, and is really deserving. It is called Singer's Patent, straight action, perpendicular needle sewing machine, and is secured by letters patent. It executes in the most perfect and satisfactory manner, tailors, boot, shoe, galter, harness, saddle, shirt, corset, carriage trimming, capmaking, hat bindings, dress making, costuming, glove-making, stockinet, carpet-bags, truss whip and upholstery work, &c., &c. We direct the special attention of every visitor to this machine.

In the Carriage line, John South, the well known manufacturer, corner North Common and Federal street, Allegheny, is as usual among the first, though the rough weather prevented him bringing out his finer carriages. He has, however, on exhibition nine vehicles, which for neatness and elegance are not surpassed. Among them we notice a beautifully finished Albany buggy, with shifting top, which enables the vehicle to be turned into an open or covered one at the pleasure of the occupant. It is very handsomely finished. Another beautiful buggy attracted much attention; it is completely lined with silvered leather, and is silver mounted. It is a Prince Albert. There is also a very elegant open buggy and a sulky. Several barouches finished in the most tasty manner attracted much attention. Mr. South has established a reputation through the entire west for the excellent quality of his vehicles, and his trade in that direction has increased to a large extent. Our readers should give him a call.

Parallel with this display is that of Messrs. Bigelow & Co., No. 46 Diamond Alley. His assortment is large and embraces very elegant patterns. A two-horse carriage in this collection is one of the most beautiful we have seen, and was surrounded a great part of the day by admirers. It is light, adapted to city use, elegantly and richly finished, with carvings. The trimmings are dark but luxurious, and the vehicle is silver-mounted. All the work is done by Messrs. B. & Co., and the design is original with themselves. A silver-mounted top-buggy, lightly built, and richly carved, also attracted much attention. The trimmings are dark and rich, suitable for city use. There is also there a very neat trotting buggy, a Germantown wagon, excellent for city use, in all seasons,—light and durable; a two-horse buggy, with extension top, and an extra side spring, which enables it to be run more easily. A very substantially built express wagon, now owned by a Wood-st. firm, is a model. We close this article with a brief reference to a beautiful child's carriage, and a request to readers to examine carefully this display. Their work is warranted for durability.

Mitchell, Herron & Co., of the Union Foundry, warehouse, Liberty street, near St. Clair, occupy two stalls in the left wing of Mechanics' Hall. Upon one of these is ranged several specimens of elegant enamelled grate fronts and fenders, of neat and varied design. Our housekeeping readers will doubtless examine these with much pleasure, but, if we mistake not, the cooking ranges which are upon the other stall, will possess greater attractions. One of these is large, and is designed for the use of Hotels, Restaurants, &c. The other is of smaller size, and is intended for the use of private families. This has been built in, as if erected in a kitchen, to afford a more favorable opportunity for inspection. The stove extends under both the oven and boiler, and all three have separate flues which center into one in the chimney.—There is what is called a "saddle" surrounding the oven, by which means the flame is carried entirely around it, distributing the heat equally in all parts. No smoke escapes into the room from the use of the range, as the flue arrangements are such as to carry it through the chimney. In addition the range is very neat, and is really an ornament to a kitchen. Call and examine them.

Nyoum's Improved Cast Iron Carriage Hub, is exhibited, as applied, near the end of the right wing. It is, if the certificates which we have seen be any test, a great improvement upon any other hub, both in points of strength, neatness and durability. The value of the improvement consists more particularly in the fact that to remove a spoke from the wheel, it can be taken out without cutting the tire, by simply unscrewing the nuts and taking off the back shell. Now in wooden hubs, a broken spoke necessitates the cutting of the tire and a separation of the fellies, to get at the damaged part. The improved hub can be made much cheaper than the wooden one, and is easily cast, as it is done without a prepared core. It is also the lightest metal hub yet invented. We particularly direct the attention of our readers to this invention. We have before us certificates of our fellow-citizens H. P. Flonniken, Dr. Fundenburg, of Somerset, and a dozen others, in which it is highly praised, as reducing the friction and holding the spokes much firmer. Messrs. Bunting & Hall, Proprietors of the National Road Stage Coach Line, certify that the tire were cut before it was required to be re-set, and that the hub holds the oil better than the wooden, having a middle channel for that purpose.

Messrs. J. R. Reed & Co., Jewellers, Fifth-st., Pittsburgh, exhibited with their Surveyor's instruments, yesterday, ten silver medals which their instruments have taken at different fairs.

Wm. E. Stevenson, our Assembly-man to be elected, whose neatly arranged and extensive cabinet warehouse, corner of Penn and Wayne streets, Pittsburgh, has doubtless attracted the attention of our readers, occupies a prominent position in Mechanics' Hall, with a very beautiful selection of cabinet ware, among which are two handsome secretarys and book-cases, one of walnut and the other of mahogany; marble-top centre tables, two elegant wardrobes, one of walnut and the other of mahogany; five chairs and a sofa, which are valued at $250, made of solid rose-wood, beautifully carved, and covered with French silk-brocade. This set is exquisite. These articles are made for his usual sale, and not expressly for the sake of an effect at the Fair. His stock of other furniture is large, and well-made—all at reasonable prices. Besides being a No. 1 man, and perfectly sound, he has established a reputation in his line of business not excelled by that of any other establishment in the city.

Granger's Magic Corn and Cob and Meal Mill, situated in the rear of Mechanics' Hall, and near the agricultural steam-cooking apparatus, is well worthy a close inspection. There are various sizes. The merit of this invention is that the inner cone instead of the outer is a fixtures and the outer revolves; it is regulated in its feed by a single nut, and it is simply and accurately constructed. But an invaluable feature of the mill is that the rollers are adjusted, and are employed on the periphery of the revolving or outer cone at its base, by which there can be no crowding of the feed on any one side, and the yield is tasde of more uniform consistency, and the cones may be brought almost together without contact while in operation. Thus the very finest material may be ground. We have not space or time to recount all the merits of this machine, but we refer them to the exhibitor, agent of the house of Crosson, Stuart & Peterson, Philadelphia, who is in attendance.

Mr. E. Ball, of the firm of Ball, Aultman & Co., Canton, Ohio, exhibits in the vicinity of the Corn Crusher, in Ohio Mower, which is certainly a very beautiful machine. Before entering upon a description of it, we may state that the firm sold five hundred machines last season, and could have sold three hundred more, if they had had them. They are preparing now one thousand machines for the next season. One of the principal advantages of this machine is in hanging the cutters bar to the frame of the machine, by a hinge or universal joint, so as to adjust of itself to its own accord, to accommodate itself to the uneven surface of the ground. A second advantage is in the frame of the machine being upon two wheels, either of which is at liberty to act as a driver, independently of the other, whilst they can act in harmony with each other, in other words, is two millsin one. Of these the proprietors sell 6000 per annum. Visitors will particularly examine these two articles.

Among the ploughs, our friends Messrs. Hall & Speer, corner Penn street and Cecil Alley, occupy a very worthy place, as they always do, not only in point of number but in the quality of their implements. They exhibit some seventy varieties of plows, cultivators, &c., adapted to all soils and uses, embracing every improvement and valuable hint. They are the pioneers in the plough business in this city, and their reputation, with their sales, extends, as it deserves, through the whole Union. The Iron Centre Draught plough, for which they have secured a patent, is universally known. We hope our readers, as we feel confident they will, will spend a due proportion of time at this collection, feeling assured, even if they do not feel a practical interest in them, they will gain a vast deal of information in relation to the plough business of the city.

The well known firm of B. C. & J. H. Sawyer, Wood-st., Pittsburgh, occupy the very first stall in Mechanics' Hall, with a brilliant display of soaps and candles;—the former in every variety, from massive cakes of variegated castile, with the name of the firm neatly inlaid, and saponaceous Goddesses, to the more ordinary but symmetrical cakes. They have Barbers' Soap, Pure Palm, Honey, Transparent "Ball," Labor saving, Variegated, White, Red and Blue, Statuary, Sigo, White, Settled, Chemical White, Chemical Yellow, Olean Oxide, or German, No. 1 Palm, Rosin, Mottled, Bun and Soap Powder. In the candle line, their stock embraces every variety:—Mould, Dipped, Sperm, Adamantine, Star, Coach and Hotel. They also exhibit Lard Oil. There was a large crowd around the stand all day, and it will be a prominent one during the fair.

L. O. Cameron exhibits in Mechanics' Hall, several Galvanized Iron Portable Ovens, which are warranted to bake with less fuel than any other oven in use, and which received the prize medal of the Ohio Mechanics' Institute, May, 1855. The material from which it is manufactured is a non-conductor, and the oven is constructed with air chambers. The heat required is generated within the oven. Our limits will not permit us to detail the merits; we can only impress upon our readers the pleasure they will have in inspecting it for themselves. Mr. C.'s establishment is on Liberty-st., opposite the foot of Seventh street, where he keeps a large supply of these excellent ovens.

Mr. John England exhibits a lot of foreign and domestic hardware, including files, &c., &c. We refer our readers to his card in another column. His stall in the Fair is in Mechanics' Hall.

HOUSEHOLD GOODS HALL.

The visitor to the Fair will of course not neglect this repository of quilts, shirts, and other articles of household goods, and while there we would impress upon his memory to examine particularly Mr. C. Daly's stock of Rosin-oil yarn. His sales-room is on the corner of Fifth street and Market alley, and he is the original Daly. Commencing upon a limited scale, the public have so appreciated the excellence of his yarn, that—all under his supervision, and by his own workmen—that the establishment is now one of the most extensive in the United States. He consumes an immense amount of yarn weekly in the manufacture of his stock, which is distributed throughout the country, in every direction, East and West. His work is not surpassed by any in England or Scotland, Mr. D. having the experience of many years among the workers of those countries. We direct the attention of our readers particularly to his stall on the Fair Ground.

DAIRY HALL.

We cannot more pleasantly continue our remarks in relation to this Hall than by faintly reviving for the benefit of our readers the pleasure we had from the exhibition of rare hot-house and cold Grapery Grapes, of Mr. C. F. Spang. Great and luscious were they, of every color, almost, and natives of every grape-growing clime. Admiring crowds constantly surround the beautiful collection.

FARM IMPLEMENTS' HALL.

Messrs. Holmes & Collins exhibit a large variety of Farm Implements, among which are the Railway Threshing Machines, which took the first prize at the last State Fair; Ike's Universal Fanning Mill, which have taken sixty-one premiums at State and County Fairs; Ingersoll's Improved Portable Hay Press; Belcher's Premium Corn Shellers; Hand Grain Drills; Butter workers; Water Filterers, Folding Ladders; Hay, Straw and Corn stalk Cutters; Vegetable root cutters; Grain cradles; Cast-Steel Grass Scythes; and many others too numerous to mention. The collection is worthy of special notice.

Messrs. Shepler & Gorton, of Beaver, came upon the ground with an invention—not, as too many are, for the alleviation of the labor of men—for the benefit of women; we refer to their washing machine, which was surrounded yesterday by an admiring crowd. It is decidedly one of the best things we ever saw, and with this remark we must refer our readers to a personal inspection of it. They also exhibit a valuable churn, which is now in extensive use. Their straw cutter, which is very simple in construction, is entirely without gearing or wheels. It does good work in short time. Messrs. S. & G. are engaged in the sale of rights and machines, and they yesterday disposed of a number of the latter. So to this stall by all means.

J. Benner's smut machine, which is manufactured at the Allegheny Foundry, is very widely known and no more so than it deserves to be.—It has several times before been exhibited. The wheat passes into the first chamber until it comes once around, when it passes to the second, and across it comes a strong current of air, carrying off the chaff and screenings from the wheat.—The wheat passes out at the lower spout. Whenever smut and dust are scoured off in the inner open concave, they pass away instantly into an outer chamber, and the air carries them out at the side. The screenings pass through the lower spout. We direct the observation of visitors to Benner's smut machines.

ARTISTS' HALL.

The Iron City College makes a very beautiful display, at the entrance to this Hall. There are specimens of every style of Penmanship, plain, business, and ornamental. There are also beautiful Pen Drawings and Penmanship Lithographed. A large crowd stood around this collection through the entire day, and every expression of opinion was of the most favorable kind. Mr. Hitchcock, the Professor of Bookkeeping, exhibits a beautiful diagram of his system of Book-keeping.

Mr. W. S. Schuchman, having returned from the Ohio State Fair with the two first prizes for Lithographic Engraving and Lithographic Drawing, makes his appearance in Artists' Hall, with one of the finest collections of Lithography we have ever seen. His establishment, corner Third and Market streets, is one of the most extensive in the Union, and he supplies work for East, West, North and South. He bestows upon all work his personal supervision, and has in his employment the finest artists to be procured.—We direct the attention of every visitor to the collection of Mr. Schuchman.

HORSES.

The length of our report prohibits us from noticing at any length the horses on exhibition. Our attention must be confined to a notice of the thorough-bred Stallion, Bashaw, sired by French Lion, imported by Mr. B. Calahan, his dame the celebrated Muscat maro, sired by one of the horses sent to Martin Van Buren, when President, by the Imaum of Muscat, from the Eastern deserts of Arabia; and the thorough-bred Brood mare Muscat, sired by one of the horses sent to Van Buren, &c. They were exhibited by Capt John Young, jr., and may be seen at Stalls No. 57 and 58. They will well repay a visit.

MR. MAURICE KUNZ on Smithfield-st., between Fourth and Diamond Alley, has opened a saloon, in which he will serve up at all hours of the day or evening, the delicacies of the season, in the most elegant style. Ice Cream always on hand, and in another week he will be prepared to furnish Oysters in every style to please epicures. His Saloon is one of the most elegant places of the kind in the country, and ladies should call once, just to see the fairy splendor of the interior fitting, and after that they will require no solicitation to call again.

PITTSBURGH WATER CURE.—We have heretofore commended this institution to invalids. It is conveniently situated on the River and Railroad, 10 miles west of the city, at *Hayeville Station*. See advertisement.

The Great Russian Remedy.—PRO BONO PUBLICO. Every mother should have a box in the house handy in case of accidents to the children." *SEE DODD'S RUSSIAN SALVE.*

It is a Boston remedy of thirty years' standing, and is recommended by physicians. Its a sure and speedy cure for Burns, Piles, Boils, Corns, Felons, Chilblains, and Old Sores of every kind; as Fever Sores, Ulcers, Bone Sore Head, Nettle Rash, Bunions, Sore Nipples, (recommended by nurses,) Whitlows, Sties, Tetters, Fits Bites, Spider Stings, Tetter, Limbs, Sciatica, Scurvy, Sore Mouth, Cracked Lips, Sore Nose, Warts and Fresh Wounds. It is a sure cure for all scrofula sores and ores, which can be testified to by thousands who have used it in the city of Boston and vicinity for the last thirty years. It no where will this Salve do an injury, or interfere with a physician's practice, as it is entirely vegetable. It is a simple and safe recipe brought from Russia—of articles growing in that country—and the proprietors have letters from all classes, who have used it themselves, and recommended it to others, that it is the best Salve in the world. It is put up in large tin boxes stamped on the cover with a picture of a horse and a dime. Price 25 cents, which pittance and economy for cooking by steam, any kind of food for stock, heating water in any quantity in tubs, barrels or vats, and will supply steam, at the least possible cost, for warming buildings by means of pipes, and is probably the most convenient and cheap apparatus for steaming logs timber ever invented. It is about four feet high, having a furnace eighteen inches deep; the fuel of it being sufficient to generate steam for two hours. From the top issues two pipes, diverging to each side from which the steam issues. The safety cock is so arranged that the boiler cannot burst, as a valve prevents the supply from being more than half cut off. It is a great invention. Messrs. Scott & Hedges, corner Main and Water streets, Cincinnati, are the manufacturers. These same gentlemen exhibit also the famous Improved Little Giant Corn and Cob Mill, which is provided with triple sets of crushers and double grinding surfaces—or in other words, is two millsin one. Of these the proprietors sell 6000 per annum. Visitors will particularly examine these two articles.

Among the ploughs, our friends Messrs. Hall & Speer, corner Penn street and Cecil Alley, occupy a very worthy place, as they always do, not only in point of number but in the quality of their implements. They exhibit some seventy varieties of plows, cultivators, &c., adapted to all soils and uses, embracing every improvement and valuable hint. They are the pioneers in the plough business in this city, and their reputation, with their sales, extends, as it deserves, through the whole Union.
