The Pittsburgh Gazette

CITY AND SUBURBAN.

THE STATE FAIR.

Second Day a Complete Success.

IMMENSE CROWD OF VISITORS.

Weather Delightful—Barring the Dust.

Wednesday, the second day of the Exhibition of the State Agricultural Society, opened up quite as auspiciously, the weather considered, as the first, and from early dawn until late in the evening from City Park was thronged with humanity, like unto bees in a hive. The Citizens Passenger Railway, although they had in use every car at their disposal, failed in furnishing sufficient transportation for the thousands of people who flocked to the scene of attraction. We started to the grounds early, embarking on a car on which were packed, sitting, standing and hanging by toes and fingers, not one less than one hundred persons, and upon arriving found the Park already pretty well filled, preparations for display in the various departments were hastily completed, and by noon the Fair had assumed its fullest dimensions.

The weather was pleasant, in respect to temperature, but while the breeze was cool and invigorating, it stirred up such clouds of dust as made, we must say, some portions of the Park decidedly uncomfortable. Relief, in some degree, was afforded by watering carts, in the sprinkling of the roads through and adjoining the grounds.

Governor Geary, attended by a number of prominent gentlemen, visited the grounds during the day, after having made the round of the public institutions in and about the city.

To-day will doubtless be the greatest one of the Fair, and the attendance, large as it was yesterday, will doubtless be greatly increased.

We continue our notices of articles on display:

WHEELER & WILSON SEWING MACHINES.

Wm. Sumner & Co., the agents for the Wheeler & Wilson Sewing Machine, have a fine display of fancy sewing of all kinds, executed by this widely known and highly appreciated invention. These evidences of its adaptability to the purpose are the most satisfactory that could be given, and here they are examined with the greatest scrutiny by the host of ladies attracted to the booth of the agents. The work performed by the tucking machines operated by a little girl ten years of age, attracts much attention, as also do the fancy worked handkerchiefs, &c., &c., on exhibition. Other work has may be as good, and give as general satisfaction, but it is the Wheeler & Wilson, from its heretofore well demonstrated merits, and with the enterprise and energy of its agents, to receive a leading pace with the late improvements, sustains the firm name it has obtained upon the appreciative portion of the public. The high-art degree of perfection has been reached in its construction, and the range of work it will do, and in a perfect way, is clear. Samples of every kind and quality, as to the various wide combinations it is capable of executing, and which was recognized the by the jury at the Paris Exhibition, who awarded Messrs. Wheeler & Wilson the first gold medal over eighty-two different competitors, from all parts of the world, is a study for every lover of fine work. Ladies visiting the Fair will find it to their interest to call at the Wheeler & Wilson Sewing Machine Rooms, where Fair visitors are invited to call.

JARVIS, HALPIN & CO.

In Machinery Hall we found the splendid exhibition of the firm of Jarvis, Halpin & Co., practical and experienced plumbers, steam and gas fitters, No. 74 Fourth street. The display consists in part of three neat stands, marble and bath tubs, elaborately furnished and equipped, one of the stands and stairs, with highly polished copper boilers for ranges, and other articles of the kind. The establishment enjoys a high position in trade circles, and they take especial care that all the work turned out from the establishment will prove not only satisfactory to the purchaser, but in every respect reliable to their own reputation as finished mechanics. In the line of gas fixtures, and decoration, steam fittings, sheet lead, lead pipe, brass tubing, &c., the work in the exhibition is well filled with manufactured articles, and they execute orders for anything in this line on the shortest notice, and in the most superior style of workmanship. To city or country dwellers dealing anything in their line, we cheerfully commend this house. Passing beyond it, we find ourselves in addition to the Fair, as it will ever close communication.

THE PITTSBURGH STEEL WORKS.

We took occasion yesterday to make special reference to the display of Anderson, Cook & Co., of the Pittsburgh Steel Works, as illustrating the rapid and very marked advancement which has been made, particularly with reference to the locality of Pittsburgh, in the manufacture of steel. The fact can not be disputed that the quality of this material has produced at the works of Anderson, Cook & Co., samples of which are on exhibition, is even superior to that for which he a few years since we were entirely dependent upon English manufacturers. Pittsburgh, capitalists, among them Anderson, Cook & Co., in enabling such a business to be established, and the credit must therefore be awarded them. The Pittsburgh Steel Works are situated in Lawrenceville, the Second ward of the city, is the largest establishment of the kind in this country, and its full capacity is required to supply the constant and large demand for steel. The articles on exhibition have been manufactured from the finest quality of possible to produced, and consist of a bell saw forty-two feet long, the machine for manufacturing it, private alarm bells, penknives and surgical instruments of the finest possible description, together with edge tools, such as axes, hatchets, drawing knives and chisels, and for carpenters use. The manifold purposes for which steel is employed render the display with which it is now manufactured all the more important, and Anderson, Cook & Co. do well in giving fair visitors opportunity of conserving the state of perfection which has been attained at the works in Pittsburgh in its production. We regard the article and the establishment by which it is made among the most substantial evidences of the growing importance of Pittsburgh as a manufacturing place, and as indicative of what our future will be with a corresponding rate of advancement.

LOUDERBY & FREW.

This extensive and business firm make a highly creditable display of saddles, harness, trunks, hose and belting, which will be found in Machinery Hall. The display, although of all the articles on exhibition is of the most practical character, is among the most attractive to the visitors the highest praise. The establishment of the firm dates back to No. 102 Wood street, between Diamond alley and Fifth street, where will be found a large and varied stock of travelling trunks, valises, saddles, harness, hose and belting. Dealers who buy to sell again will purchase advantageously from Messrs. Louderby & Frew, as their prices are most reasonable. Those at the Fair should not fail to call and examine the display, as it is worthy of inspection.

LAFAYETTE STOVE WORKS.

Messrs. Hannah & Sons, the proprietors of this popular foundry and stove works, have invested in Domestic Hall by far the most extensive and handsome display of stoves, ranges, grates, fenders, &c., ever made in this line. The assortment of cook, parlor and office stoves is very large and embraces many well and favorably known styles. The "Union Range," one of the most perfect, we think, of the numerous specialty worthy of notice. It combines several improvements while, under its peculiarly attractive to the table. It is so arranged as to prevent all the smoke of the fire and fumes of cooking victuals into the stove, having the water back, as usual, and in consequence is not so hot and not likely to get out of order, and having the oven in such position as to be convenient and handy. After the "Union Range" is fully understood and its merits appreciated, as they should be, it will be in very demand, and we think already large sales of the firm engaged in its manufacture will be greatly increased. As a fuel saver the Haberstroh patent illipitic grate, on exhibition, will be found to merit all the fame it has acquired. The Lafayette cook stoves were very good, plete and extensive, and the proprietors are fair dealing and clever gentlemen. Their office is at No. 24 Liberty street and corner of Ohio and Wood streets, Allegheny. Strangers in the city will do well to favor the firm with a purchasing visit.

HARDWARE CUTLERY, &c.

Strangers in the city attending the Fair should not fail to visit the hardware and cutlery establishment of James Bown, at No. 138 Wood street, long established and well and favorably known to the public.

Recently material improvements have been added, increasing the capacity both of manufacture and sale, so that it will now compare favorably with any kindred establishment outside of metropolitan cities. His present stock in trade is complete in all respects, and country merchants will find it to their interest to favor it with a call, as in addition to making up their orders, the necessity for laying over the whole stock in order to select such articles may be dispensed being obviated by the enlarged store rooms. A specialty of the house consists in the superiority of the articles it offers to the trade, and sporting men cannot fail in securing a rifle or shot-gun suited for all purposes, while the variety of pistols in store consist of all the latest improvements and of the choicest description.

PROF. W. SHAFFER'S SPECIMENS.

In Art Gallery will be found a collection of the chirographical specimens of Professor Newton W. Shaffer, the proprietor of the very excellent Commercial College, St. Clair street. There is nothing about Mr. Shaffer's penmanship which will commend it to an unskilled observer, but, free, flowing and graceful. We searched in vain for any lifeless, labored, stiff or irregular movement of the pen. Every line is drawn with precision and the shading is faultless. As an artist we believe Mr. Shaffer has no superior in this country, and certainly his skill, as he at the Fair is very creditable. The old conducted business college, his wife's, is taught by Mr. Shaffer and a corps of able assistants, and parents having sons of able assistants, and parents having sons to educate can do no better than by sending to this institution. During to-day them to this institution. During to-day Mr. Shaffer will be in attendance to execute off hand specimens of his writing to all who call, and we may reserve that the challenge competition from any quarter. These specimens on exhibition embrace only a few examples, the remainder being flourishing writing, off hand business pens, ornamental, and for card writing of all descriptions. Let no reader fail to call and see the booth of Mr. Shaffer, and be convinced that when wielded by such a clever artist, the pen is truly mightier than the sword.

LAMPS AND OIL.

Mr. G. Porzel, at No. 90 Smithfield street, was among the pioneers in the lamp business, which has become so important, arising out of the adaptation of coal oil as a means of light, and has kept pace with public requirements in the supply of the rapidly resulting in the building up of a very large trade. His establishment is now headquarters, or others requiring them, will find on exhibition a large assortment of lamps, as full and varied as can be found at other lamp stores in the city, comprising every sort of lamp manufactured, including late inventions. His burning oils have sustained the highest reputation as to safety, a matter of the highest consideration. Thoroughly understanding his business, having the advantages of large practical experience, those favoring him with their patronage may rest assured of securing the best articles obtainable in the way of lamps and oils. His productions are not on exhibition at the Fair, but strangers in the city should not fail, if they desire a surprise in his stock, to call at his store, No. 90 Smithfield street.

WATER AND GAS PIPE.

The National Foundry and Gas Pipe Works, William Smith proprietor, located in the Ninth ward of the city, at the corner of Carroll and Smallman streets, have become justly celebrated in the matter of gas and water pipe, and specimens of this kind of production are on exhibition near Machinery Hall. Mr. Smith has secured some very valuable patents, by which he is enabled to manufacture all kinds of pipe from two to sixteen inches in diameter with great facility, and at much more reasonable prices than heretofore. He has supplied our city during the present season with five miles and Allegheny City with seven miles of water pipe, and has a contract to supply the city of Chicago with five hundred tons for the new water works recently there constructed. Notwithstanding the very large capacity of his works, some fifty tons daily, Mr. Smith has found it impossible to supply the rapidly increasing demand, and he was obliged this week to refuse an order for fifty thousand feet. His establishment is one of the largest of the kind in the country, and a very material addition is to be made. Visitors should satisfy themselves of the marked improvement which has been accomplished in the manufacture of pipe by examining the specimens on exhibition by Mr. Smith.

THE WEED SEWING MACHINE.

Major R. H. Long, one of our leading spirits in the Sewing Machine controversy, as agent for Weed's celebrated invention, has his booth elegantly and most tastefully fitted up, and has located it a little north of the main stand, exhibiting his machines. With specimens of workmanship, to the best possible advantage. The Major appears to be a believer in the Sewing Machine line, and unquestionably possesses the greatest advantages, as indicated by the very general favor with which it is meeting with the public. Simplicity, thoroughness of construction, adaptability to all kinds of sewing, and the simplicity of its execution, are among its merits. These machines will have no more earnest advocate than Major Long, and visitors cannot but appreciate the unanswerable evidence offered by the most satisfactory demonstration of the superiority he claims for them. The rotary feed machine is greatly improved and is unequalled for light, round sewing, or heavy family sewing, passing over uneven surfaces without the change of speed or stitch, and operating on any material, no matter how fine or how coarse. This machine, at the Paris Exposition, received the first prize as a family sewing machine, which speaks volumes for its favor. The value of sewing machines must be admitted by all, but judgment is required in making a proper selection, all not being equally valuable, although each may possess real points of merit. Purchasers therefore should make a careful and critical examination of the various machines, and in which all the latest improvements are introduced. The fashions in carpets and floor coverings are variable and housekeepers should be cautious in exposing themselves to a prevalent style.

CLOTHING READY MADE.

The representative house in this department of trade in our city is that of J. R. Kemaley, 250 Liberty St.—a fact which we would impress upon Fair visitors, without from the while reputation of this establishment this may be considered as doing a large business, Mr. R. necessarily keeps up his stock to meet the demand, while at this season of the year the stock of Overcoats in store is all that could be desired, suited to every taste, and to style and quality of material, both for men and boys. The stock also comprises all other articles pertaining to a clothing store, all in the latest fashions, and to which we would refer those in search of ready made clothing or other articles pertaining thereto, to call at Kemaley's. They will find it pay.

WASHING COMPOUND.

In Domestic Hall will be found on exhibition specimens of Jackson's Universal Washing Compound, which is rapidly classed among the great labor savers of the age. It is a preparation which greatly lessens the labors of washing, and will prove a blessing auxiliary to the laboring wives and daughters. It saves at least five hours of the time usually spent in washing, and renders the work very easy. It is also very valuable for scrubbing purposes and for paint, and the cleaning of which they sell at the glazing of residences and public buildings it is unequalled for ornamental work. The reasonable prices and is a durable and satisfactory manner. The stairs will be put in very best quality, as the specimens at the booth will attest, and in the most neat and handsome colors. Orders for the above will on exhibition is a fair sample. We can recommend the compound to the highest terms for our readers, and to all other readers as being a reliable one and worthy of their patronage. The price is very low, and the agent is always in attendance to explain its merits. The address of the firm is at Pittsburgh and Allegheny. In addition to this line should remember to favor Mr. Parry with a call or order.

A GREAT INVENTION.

Parties wishing to procure State, County or district rights for the manufacture and sale of a machine which is destined to work the age, are directed to the great Irwin Draft Equalizer, which will be found on exhibition in Domestic Hall. It is one of the best articles of the kind we have ever examined, and faithfully performs all that is claimed for it, and we have no doubt of rights are very fair, as they are to be disposed of at very liberal rates. For further information, call on or address by calling at the booth where it is exhibited.

LIVINGSTON & CO.

This business firm is a most extensively engaged in the manufacture of steam and gas fittings, loose boxt hinges, refined malleable iron castings, &c., specimens of which are on exhibition in Mechanics Hall specimens of the finest quality, and which evince the highest credit. The castings are perfect and present a fine, smooth and attractive appearance. Where a firm is so well and favorably known as Livingston & Co., we feel that it is hardly necessary to add anything to this fact. For many years this firm has been engaged in the manufacture of these articles, and has established a reputation for them which is unsurpassed, as they can be relied upon to be of the best quality, and as durable as genuine Italian marble. They have been awarded the first premium over all competitors from superior slate stone and enameled in the Pittsburgh Exhibition of 1859, and the Brocatel, Red Pyrenees, Porphyry Sienna, Yard Antique, Egyptian, Spanish and other varieties of marbles of the first quality, and can be furnished at very liberal rates. Those in search of fine mantels should not fail to call and examine the specimens on exhibition and our readers can call and examine it for themselves. Those in search of a fine mantel for their parlor or sitting room, which perhaps will prove even more attractive to guests than to have their peculiarities and distinctive features.

FANCY GOODS.

In Domestic Hall the great centre of attraction for the ladies is the fancy goods stand of Jean Davy, of Niagara Falls, in the way of fine paper fans, including hand screens, mantel ornaments and other attractive articles. Mr. Davy has cosented to display his specimens of workmanship at the Fair, and ladies should make a point to call and examine them, as it is not just the place to purchase, as we were told by the proprietor, but the splendid feather breeze coolers we have ever seen, and the ladies will find them cheap for the amount of labor and beauty displayed in the design. Those in search of anything in the fancy goods line will find a large and splendid assortment at the booth of Mr. Davy, which is presided over by the pleasant lady of the proprietor, who will be found very polite and accommodating.

KNITTING MOWING MACHINE.

This machine, claimed to be the best mowing machine in the world, is attracting much among the large display of agricultural implements. It is manufactured by the Knitting Mowing Machine Company, Worcester, Mass., and is constructed so as to answer the purpose of a horse rake. After a careful trial the single mower has become an "institution" at the Fair, and is highly praised. It is the only really practicable and successful machine for cutting grass and grain on hillsides. The double mowers have proved equally successful in cutting grass, and the combination of draft and easy execution commands the admiration of all. Among the many points of excellence we note that the wheels are higher and broader than those of other mowers, and both wheels are cogged, the castings are tubular, securing greater strength and lightness. The gearing is of wrought iron, and the cutter bar, while strong, is light, and is so arranged as to be easily raised or lowered. The knife is of the finest quality of steel, and is so constructed that it can be readily sharpened. The machine is always up to change in the fashions and styles, and can cut from the ground to a height of six feet. The Fair will have a large and judiciously selected stock of goods on hand for the spring trade, and will be found at the old stand, No. 70 Fifth street.

SOAPS OF THE FINEST QUALITY

Are exhibited by Brunner, Taylor Reed & Johnston, whose manufactory is at the corner of Liberty and Baldwin streets. Soap is one of the articles indispensable to use, and the samples displayed must satisfy any one of the superiority of the qualities of the goods, as it leaves a bright polish and purity of color, and the perfume is delicate and exquisite. Orders for this very valuable article can be left at the booth where the exhibitment can be seen, and the delightful aroma which distinguishes the booth of Reed & Johnston.

MORRISON & CO.

In the room of the late Emporium, 65 and 67 Fifth street are characteristically energetic during the present fair exercising the discretion of rare inducements to visitors to purchase, as the unusually varied assortment of goods they have on sale, at prices, too, which cannot but prove attractive, to the old stand people of the rural districts, accustomed to visit the city only to buy when the business is done on a less rapid scale. The evening sales at the Emporium attract crowds, and these will continue to increase rather than diminish until the close of the Fair. Visitors will find on exhibition the articles to be found at the establishment, which explains the popularity of the house, and which is constantly adding to the assortment.

WILLOX & SIBBS SEWING MACHINE.

We have not noticed these before, but it is deserving of attention, as it is worthy considering the amount and variety of work they perform, and the ease with which it is done. A simply constructed machine in the whole exhibition. The stage is noiseless and the motion easy, which happens to be the initial of the inventor's (Gibbs) name. They are also known for every kind of work from the hemming of a gauze veil, to the binding of a heavy blanket, and for the patented twisted loop stitch, remarkable for the firmness and elasticity it throws the seam into, and the small machine sewing, it makes a very ornamental "raised stitch," which is also manufactured by the same machine. A small machine of a beautiful silk braid and then sews it on without any chain or tie stitch. A specimen of close stitch approbriating is displayed on the album, along with other finished fancy looking piece of work, giving layers of fine cotton, and which is quilted, cut and shaped together at one operation, and, well done, too. The pamphlets of the company also contain a full account of a lively contested trial with one of the celebrated "Lockstitch" machines, in which the Willcox & Gibbs came off victorious. It also was awarded the first premium at the late Agricultural Fair, held in Allegheny.

Our enterprising friends, Carson Brothers, No. 43 St. Clair street, are agents for this city.

WILLIAM SEMPLE.

This worthy representative of our mechanic interests will be found on exhibition with the large amount of trade attracted to it by the superiority of its goods, and the high order of business capacity, affords strangers in attendance at the Fair a favorable opportunity to examine the magnificent stock of city goods with which his house is kept at all times supplied. The style of goods which will naturally flow from this will be found to be the latest and most approved, and know the fast previously, realizing it in the immense trade they command. Those at wholesale can be purchased here with quite as great advantage as in the large eastern metropolitan cities, where only it had come to be considered, from the great discrepancy existing between country merchants should buy their stock which has been the case for many years, men as Mr. Semple is fast dispelling this idea, and as the trade is aware, the prices of goods in this establishment are such as to favorably compare with the rates of the eastern cities, and the advantages of the fact that it also produces a highly polished, durable and beautiful article of steel, and finishes the bar or rod as straight and true as it issues from the rolls. The steel manufacturers of sawing and mowing machines has very materially been benefited by this discovery, which is also adapted to cutter and finger bars, giving them the requisite degree of strength and elasticity, and Jones & Laughlins, to whom the invention is approciated, are also engaged in the manufacture of the tools, so as to provide for reaping machine manufacturers, and are now also prepared to furnish the public with the best Babbit metal.

The firm are also have an approved style of pulley, light, symmetrical and strong, and the self-adjusting hangers, or exceedingly simple construction. The axle and wrist-pin with the best Babbit metal.

The firm have the exclusive right to the celebrated "Collins patent fair-adjusting hanger," which possesses many points, and have neither bolts nor keys, and can be put on or taken down with the greatest facility.

Agricultural implement makers cannot fail of profiting by an inspection of the display of Jones & Laughlins, and we would advise all manufacturers selling steel to call and examine their accomplished business manager, Col. H. T. Kemp, who has pleasure in imparting such information as may be desired. We may state, as matter of information, as also indicating the appreciation of the productions of the above firm, that during the past year the proprietors have furnished over one million pounds of their steel to customers nearly fifty thousand of which was cast steel, required in the manufacture of reaping and mowing machines.

AN IMPROVED CHURN.

In Domestic Hall will be found an exhibition of a churn which has already worked a revolution in the agricultural districts of the country, and when fully understood will be generally adopted, as it is unquestionably the best churn ever made, and the simple delayed must satisfy any one of its superiority. All descriptions are shown, from that devoted to the use of a single family to that of the dairy and butter dealer, and the display is as pleasant a one as can be found in the whole list. It is against the delightful aroma which distinguishes the booth of Reed & Johnston.

MORRISON & CO.

In the room of the late Emporium, 65 and 67 Fifth street are characteristically energetic during the present fair exercising the discretion of rare inducements to visitors to purchase, as the unusually varied assortment of goods they have on sale, at prices, too, which cannot but prove attractive, to the old stand people of the rural districts, accustomed to visit the city only to buy when the business is done on a less rapid scale. THE COLUMBIA STOVE.

The Columbia stove exhibited by John Sill & Sons is a splendid specimen of a cook stove, and is admirably adapted for family use. They are of various sizes and combine many excellent and economical qualities. The oven is large, the draft perfect, and the fire and ash pan are of the most approved construction. The cooking surface is ample, and the stove is altogether a first class article. The Columbia stove is also manufactured by Messrs. Thomas H. Bingham & Co., and Messrs. Sill & Sons, and it is pronounced the compound to the highest terms for our readers, and to all other readers as being a reliable one and worthy of their patronage. The price is very low, and the agent is always in attendance to explain its merits. The address of the firm is at Pittsburgh and Allegheny. In addition to this line should remember to favor Mr. Parry with a call or order.

THE GREAT ATTRACTION.

The great attraction of the Fair is the beautiful display of fine stock of the grounds, which is conducted entirely by gentlemen of the highest order, and the exhibitors will be sure to find tempting grapes in enormous quantities, and of the most delicious flavor, grazing the walls on either side. The display is the best and most extensive ever seen on the ground, and of the most famous species. Here we have several baskets of healthy looking grapes, which are simply the most beautiful out flowers, hanging baskets, and other articles of the kind, and the display cannot be surpassed, and botanical skill exercised in the arrangement of the "Queen of Wilds," which is the prettiest feature of the exhibition. Mr. Wilson Allen, a gallant citizen, Gen. J. S. Negley, (who, by the way, is in the saddle as the handsomest of person as he was in the hottest of the battle in time of war), and is worthy miles for his efforts in this line, and likewise at his office, No. 137 Liberty street.

The display of Mr. Knox is certainly worthy the attention of strangers, and we understand that the recent robbery of the American Express Company will not affect the interests of their employer, named E. C. Gillette. The robbery was committed on Wednesday night, Saturday night, while the Montreal express was passing from the city. Gillette, supposing the bags which had been entrusted to his care contained $19,000. On the arrival of the train at Thirty-first street Gillette was missed from his post, and found on the platform of the track. This afternoon he turned up voluntarily at the office of the company, and stated that he was a fool for having left his post, and that he was willing to make good the loss. The affair is as bad as it was originally reported, and the depredators will find that the company, as we are informed, has been prepared for any such emergency, and did not mean to be "bluffed" by a mere boy. Gillette's bail was fixed at $5,000, which was readily obtained. Up the time of going to press the bags which had been entrusted to his care had not been found, and the matter is still involved in mystery.

In the display we notice several patent fruit cutters, which are worthy of examination. The Sprout Compound steel horse rake is a most desirable article, having an independent spring to each tooth, and being perfect in every respect. The Sandusky Cultivator, manufactured by the Sandusky Implement Co., is also a most desirable implement. We cannot dwell any longer on the many articles of household and agricultural implements we have on exhibition.

RIVER NEWS.

The Louisville Courier, in speaking of the Great Republic and Richmond, says that they are the representatives of rival cities. Now, we think this a mistake. It is folly for Louisville to think of competing with Pittsburgh in building boats or doing anything else, and the sooner her newspapers and people find this out the better.

The K. G. Gray sunk on of her barges at Blue River Island on Saturday last.

The Memphis Avalanche, of Monday, says: As we stated in the Courier Saturday, the river is at a low stage, and more unavailable conditions than we say it was since 1861. There is now a range of water in 1867, but not so low as even now by six or eight inches. The Courier was not in existence at that time, and so we cannot say whether it was or not, in the agent of the company, informed him of the fact that the boat was ready to receive any freight he had taken.

The Pittsburgh Tribune, of Tuesday: Financial matters were somewhat irregularly reported to-day, though the amount of the banks initiated in consequence of the stringency in the interior more active than for a day or two. The principal movements were in the direction of moving cargoes, though, in the aggregate, the amount of currency was not increased. The small remittances of currency were received by express companies from St. Louis, and the gradual increase in the offerings of business paper indicates that the banking institutions are beginning slower. At all the institutions the number of signatures, and the necessity for a little leniency in the matter of renewals is daily manifested. The bank rate is firm at 10 per cent. In the open market money is quoted at 8@10 per cent per month.

The Cincinnati Gazette, of Tuesday, says: The demand for money was not pressing to-day, and the quarters in which it was reported quite light, but liabilities are not withdrawn. The banks have as much paper offered to them as they can handle, and the only reason why the demand is virtually too much in the shape of the paper presented is because the money market is daily working slower, and rates of interest are firm at 6@7 per cent. for first class paper. In the open market money is readily taken at 10@12 per cent, on ample security.

PITTSBURGH PETROLEUM MARKET

OFFICE OF THE PITTSBURGH GAZETTE, WEDNESDAY, September 25, 1867.

CRUDE—The market was nothing very quiet to-day, though, if anything, there is a firmer feeling, which is in consequence of the stock being rapidly reduced, and but little prospect of any material increase in receipts for a week. The receipts to-day were 1,000 bbls, but a single sale reported, 197 bbls at 18½, bbls returned. Spot oil may be fairly quoted at 18@18½, and September at 18@18½, delivery in October, and 18@18½c, buyer's option. It is estimated that the entire stock of crude oil in this market at present, will not exceed one thousand barrels, and the producers have about forty thousand barrels are under contract for 1868, leaving one hundred and thirty-seven thousand barrels in the hands of refiners, dealers and speculators. This is certainly a very light supply for this market, as some of our large refineries have capacity for 50,000 to 60,000 barrels per week. The refiners who hold oil "free footed," hold on like grim death, in anticipation of still higher prices.

REFINED.—There was rather more activity in the refined market to-day, and a firmer feeling, though there is still plenty of room for improvement. We can report sales in three different lots, of six thousand barrels, all for the last three months, and all at 34½c. September is quiet but firm at yesterday's quotation, and 37@38c for prime light straw to white.

Buffalo Market.

[By Telegraph to the Pittsburgh Gazette.]

BUFFALO, September 25.—Flour steady—white winters in demand; sales 1000 bush. No. 1 Milwaukee at $2.20, 14,000 bush. No. 2 at $1.87, 31,000 bush. No. 1 Chicago at $1.87, and 3000 bush. No. 2 at $1.80. Corn in fair demand and firm and lower; sales 21,000 bush No. 2 western at $1.01—part to arrive. Oats quiet and lower; sales 40,000 bush. at 150—part to arrive. Barley quiet and firm at 75@80c for Canada and 90c@$1.00 for Canada West. Rye steady; sales 500 bush. Illinois tinashy at $1.10. Provisions unchanged. Pork—A good demand for mess; $19.50@19.75. Lard firm; 15½@16c for prime. Whiskey—Sales of 1,000 barrels Michigan, Ohio and Canada at 35c. Receipts—Flour, 4,000 bbls; wheat, 45,000 bus; corn, 71,000 bush; oats, 7,000 bush; barley, 1,000 bush; and rye, 4,000 bbls. Shipments—flour, 10 bbls; wheat, 10,000 bush; corn, 95,000 bush; oats, 61,000 bush; barley, 34,000 bush; rye, 7600 bush.

Toledo Market.

[By Telegraph to the Pittsburgh Gazette.]

TOLEDO, September 25.—Flour quiet and firm for the lower grades; receipts 4,000 bbls. Wheat; receipts 16,194 bush white is unchanged, closing at $2.20 bid and $2.25 asked; sales or white Michigan at $2.25; amber at $2.25@2.30; No. 1 white Michigan at $2.25; amber at $2.25@2.30; No. 1 red at $2.05; No. 2 do at $2.00; sales of amber for the month at $2.23@2.29. Corn 1c@2c lower, closing dull at declined; receipts 27,000 bush; sales of No. 1 Wabash at 81.13; No. 2 do at 81.10½; Michigan at $1.10; sales of No. 1 for the month at $1.13. Oats a shade better; receipts 3,000 bush; sales of No. 1 at 69c@69½c; No. 2 at 66c; sales for all October at 65c; for first half 66c. Rye at $1.20 for No. 1; no receipts. Barley at $1.31 for No. 1, with no receipts. Lake freights firm; to Buffalo on corn, 5c on wheat to Oswego, 6½c on corn, and 4c on wheat by steam to Buffalo.

Cincinnati Market.

[By Telegraph to the Pittsburgh Gazette.]

CINCINNATI, Sept. 25—Flour firm, but quiet; family $10@10.50; extra $9.50@10; red $7.50@8.50; No. 1 Red. Corn quiet but firm, at 97@98c for No. 1 white; 95@96c for No. 1. Rye $1.20@1.25. Barley firm at $1.50@1.60 for No. 1 and $1.30@1.40 for No. 2. Oats quiet and firm at 70@71c for No. 1 white; 68@69c for No. 2. Provisions dull and unchanged. Lard firm at 15@15½c for prime; 16c for kettle rendered.

Cincinnati Market.

[By Telegraph to the Pittsburgh Gazette.]

CINCINNATI, Sept. 25—Flour dull, but prices are well maintained—$10.00 to $10.50 for Spring Wheat; $11@11.50 for Winter Wheat and $12@13 for fancy brands. Rye Flour is quoted at $8.

PROVISIONS—Bacon is steady but unchanged at 15c for Shoulders; 17@18c for Sides and Clear Sides; 22c for Plain Sugar Cured Hams, and 23c for Canvassed do. Lard is firm at 14@14½c, and Mess Pork $26.

SEEDS—Flaxseed is in good demand at $2.50. Timothy Seed is being sold in a retail way at $3, but round lots will not command above $2.90@3.05. No demand for Clover Seed.

BUTTER—There
