Col. Phillips being present, stated that the report presented by Mr. Ewing did not fully express his answer to the Committee, but rather changed its meaning. He had given the subject careful consideration, and while, if nominated by the Convention without his solicitation he would not feel at liberty to decline the honor, still he would ask leave to withdraw the report of the Committee, and keep out of the canvassencommittee, and keep out of the canvass entirely. He was prepared to warmly unite in the support of any candidate put forward by the Convention. the efforts of his friends, at this late stage of the canvass might excite discord in the ranks of the party. Either of the candidates now prominent was worthy support, and he would go in to help to give one or the other a large insjority.

Under the circumstances, Mr. Steel thought it perhaps desirable that the request of Col. Phillips be complied with.

Mr. Keeler moved that the request of Colonel Phillips to withdraw his answer to Colonel Phillips to withdraw his answer to the committee be granted. There were certain principles to be observed in a campaign, and one was that it was not best to change the front in the presence of the enemy. He thought that under the dreumstances the club had better act as requested.

ark, proprietor of the "White Cottage," at Perrysville, made information before Alderman McMasters, yesterday, charging Major A. H. Munroe with larceny by bailee. It appears that the Major was on a visit to Perrysville a few days since when it seems the proprietor was absent from home, and he took a great fancy to a canary he discovered in a cage at the aforeplace, the property of Mr. Clark, and by some means got possession of it, we know not how, but it must have been legally or the prosecution would have been for larceny. When Mr. Clark returned home he made inquiry regarding his bird and was informed that the Major had taken it with him. He called upon him for the bird and cage but the gallant Major refused to give it up, hence the information. He was arrested and after a hearing a commitment arrested and after a hearing a commitment arrested and after a hearing a commitment made out and given to the constable, but rather than be caged himself he agreed to give up the caged bird, and in a few moments after the prosecutor and defendant came into the office together, the former carrying the cage and bird, and requested that the prosecution be withdrawn, which the Alderman vary properly consented to the Alderman very properly consented to and the prisoner was discharged.

Imitation Marble—A Great Invention. There has been going on silently but with marked effect, a great revolution in the marble cutters art. The secret of turning homely slate dug from the quarries so numerous throughout our country into an imitation, if imitation that which exceeds the genuine can be dalled, of the costliest and most beautiful marble produced in the broad world, has of late been largely embroad world, has of late been largely em-ployed in the production of mantels, mon-uments, tables, tablets, signs and orna-ments. We believe there are but seven persons who thoroughly understand this art in the United States—at least not more than that number practice it with decided that number practice it with decided success in this country. In this city Mr. W. W. Wallace, 319 Liberty street, has W. W. Wallace, 319. Liberty street, has been the first and only one to introduce the manufacture, having secured the services of Mr. J. F. O'Brien, of New York, to take charge of that department. The process of marbleizing slate is a beautiful one, requiring the greatest care, skill and attention. We do not mean to go into the details, but it will suffice all practical predetails, but it will suffice all practical purposes to state that the imitation marble is far prettier, more elegant, more servicea-ble and decidedly cheaper than the ordinary expensive marble now used in parlor. mantels, vestibules, &c. While the Wheeler & Wilson company has given to the public the best fruits of inventive genius, it has guarded it from a multitude of traps. Attachments have been added for various purposes, as hemming, binding, braiding, cording, &c., but it has been kept free of all useless complications. Simplicity of parts, and adaptation to the widest range of work, has been the constant aim. Instead of boasting of a variety of useless stickes and movements, it claims to make but one kind of stick it claims to make but one kind of stitch, and that with the fewest movements possible. Hence the machine may run constantly for fourteen years, or a lifetime, even, and work just as well as when new. With a complication of parts and movements, it would require monthly repairs and adjustments. As the purchase of a Sewing Machine is, or may be, an act for a lifetime, care should be had in getting what time and use have approved.
