The Pittsburgh Carette.

FARM, GARDEN AND KITCHEN. Live Pences.

A correspondent of the Owatonna (Minnfence has often been discussed in the agri-cultural papers of the West, but farmers generally have manifested an almost criminal apathy on the subject. I propose, with your leave, to give a few items on the subject. Five years ago there was a man selling white willow sprouts in this neighborhood and among others sold Dexter Smith some five hundred. As Mr. Smith was the only really successful cultivator of the willow in this vicinity, I will give his method of cultivation, with the understanding that the land must have been thoroughly cultivated where the willow is to be propagated. Turn four furrows together, two on each side, on a straight line, put the cutting (should not be less than one foot in length) one foot apart, put from four to six inches of the cuttings into the ground as soon as the frost is fairly out in the spring. The cuttings should be taken from the tree and immediately set out, and should be cultivated the compositions of the composition of th

ed like corn for three years. They should be protected from all kinds of stock for four years, yet all the protection Mr. Smith's have had is an ordinary outside fence. He has now about one hundred rods of willows from one to five years old. They are from eighteen to twenty five feet high and from four to seven inches, through. Mr. Smith has proved by actual demonstration that a good live fence can be raised in five years which will last an age, and at the same time provided himself with a shelter from the wind and a splendid ornament to his

Cattle Stalls.

As to stalls—we have seen lately in one neighborhood up in the mountain farm region of Pennsylvania, three instances of what appear to us to be comfortable; common sense stalls for cattle. The stalls are wide enough to admit of the animals turning in them, the sides closely boarded up, the floor, a dais, raised seven or eight inches above that of the passage way in the rear, with an outward pitch of about three inches with an outward pitch of about three inches in the length of the stall, the entrance of each closed with two leaved folding doors opening inwards. There are no rings, stanchions, or any tying or fastening by the head. No animal, flot absolutely a fool, will ever stand, head down hill, and always, in every instance we found the cettle in in every instance, we found the cattle in these stalls, standing "right end up," well up to the rack, and as clean and comforta-

ble as animals ever need be. As all bovine animals have their little inches and inconveniences to attend to as. well as ourselves, and would be better for the use of their tongue with which they can reach nearly every part of their bodies, this freedom of the stall seems to be a very good common sense arrangement; besides providing comfortable quarters in all cold, stormy weather. The stalls need not be expensive, being all made of rough materials. and a sufficient opening above the folding doors to afford free ventilation.—Saturday. Evening Post.

A GOOD SIZED NEBRASKA FARM.

Messrs, Clark & Craig, of Cadiz, O., have purchased the whole of the southeast township in Stanton county in this State, and propose putting the whole of it under cultivation, amounting to twenty-three thous-and and forty (23,040) acres. They have instructed their agent to erect a house, sta-bles and other buildings in the center of the said township, and divide the farm into four parts by breaking a strip two sods wide around the outside and one across the middle, east and west, and another north and south, leaving the house (center) in the morning and make the circuif of one quarof the township (12 miles) in one day, priving at the house of miles arriving at the house at night. The agent is to have three hundred and twenty (320) acres broken this year, and next spring will plant it in timber. He is also instructed to put out one million of Osage Orange plants next spring, inclosing the whole township with the hedge

A werren in "The American Journal of Horticulture" adopts a plan in budding roses which greatly expedites the work, and is attended with complete success. Instead of baste or worsted, common adhesive plaster is substituted. In this method no tying is necessary, the plaster adhering at once exactly where it is required. The plaster used is the common adhesive plaster bought at the shops, and the writer states that by its use the budding is performed with greater neatness and exactness as well as rapidity.

2.

SALT PER POUND.—As to the quantity of salt to be used for butter, something will depend upon its manufacture, and the market for which it is intended. The Orange county butter makers, who obtain the largest prices for their product, use at the rate of a pound and two ounces of salt for a batch. of twenty-two pounds of butter. For Win-ter butter, or butter designed for Winter use, a little more salt is used at the last working.

BARK LICE usually hatch during the last of the month, and by observing carefully they may be seen crawling to the outer limbs. A mere speck of any decoction rubbed on with a brush will kill them now; a brush alone is sufficient, as the least touch will mash them. There is no secret in this, but all limbs and branches must be rubbed or there will be another crop next year, The wind blows them from one tree to an other, and birds carry them on their feet for

Large sums of money have been taken into Texas this spring for purchasing beeves. It is said \$75,000 alone have been paid out in Bell county for them. Large roves of cattle are now wending their way to Missouri from Texas, by way of Arkan-sas. Recently Texas beeves have been shipped from New Orleans to Louisville. This trade promises to be immense, and will bring in millions of dollars annually to the

THE Gardener's Monthly recommends the following mode for enriching the soil for young cabbage plants just before they are set out, for the purpose of giving them an early and vigorous, elert. Make holes with a dibble where the plants are to be set, and then fill these holes with manure water. It

soaks away into the surrounding earth, and becomes perfectly diffused through it. The plants are then set in the holes.

Be in no hurry about planting corn. Any time before the 20th of May, and it were better to dolar it will the lat of June, rather better to delay it until the 1st of June, rathe er than plow the land either too, wet or too dry. Take every possible advantage of the weather to mellow the soil. If, at the first and Continual Value Take impage views of begow. hoeing of corn, a handful of unleached ashes be used per hill, it, will be found, to tell in securing a vigorous start of the plant.

THE American Agriculturisi says that lifferent kinds of potatoes may be planted different kinds of potatoes may be planted in contiguous rows, without mixing the productiveness of the diser way of comparing the productiveness of the different warreies. We know of one person at least that don't believe that doctrine insisting the productiveness of the different warreies. We know of one person at least that don't believe that doctrine insisting the productiveness of the different warreies. We know of one person at least that don't believe that doctrine insisting the pole of each is sure to mix and device. He was an all productive and person at least that don't believe that doctrine insisting to be a substitute of the pole of each is sure to mix and device. He was a beautiful plant the pole of each is sure to mix and device. He was a beautiful plant the pole of each is sure to mix and device. He was a beautiful plant to be considered by the pole of each is sure to mix and device. He was a beautiful plant to be considered by the pole of each is sure to mix and device. He was a beautiful plant to be considered by the pole of each is sure to mix and device. The pole of the pole

so that when the insects come and find nothing they leave in disgust. The wheat rethe grasshoppers go over it they take root as well as stalk.

THE reports from the peach growers are generally favorable. In New Jersey, or-chards on low grounds are said to be dam-aged, and in other orchards it is reported esota Journal says: "The subject of live that the borer has injured many trees. On the whole, however, there is a prospect of an average crop. From Delaware and Maryland the reports are generally favorable. In Pennsylvania some trees have been injured by the mice, and many hundreds of trees have been destroyed. The trees that have escaped the mice now look well, and a fair crop is looked for.

GARDENING FOR LADIES. Make up your beds early in the morning; sew buttons on to your husband's shirts; do not rake up any grievances; protect the young and tender productions of your family; plant a smile of good temper in your face, and carefully root out all anorm fadings and great a good out all angry feelings, and expect a good crop of happiness.

Ir a farmer in Wisconsin plants a row of trees along the road he is exempt from working on the road; whoever hurts one of these little ones is fined five dollars; and the State Horticultural Society offers a premium of one hundred dollars for the best ten acres of forest trees, and fifty dollars for the second best....

WHEAT prospects are very flattering in Western Missouri and Kansas. Oats are looking fine, and there will be an extra amount of land sown. Corn is backward, owing to the cool weather, but the farmers are straining every point to get in an arrest are straining every point to get in as much as possible.

THEY who know least about farming in-THEY WING KNOW least about farming in-struct most. How glib they are—plow deep, drain every acre, plant forests, have fine cattle and carpets, grapes by the ton, wine by the hogshead, feed potatoes to hogs, and do other heavenly things.

Examine your trees during the last days of the month and remove all nests of worms as soon as they make their appearance. They usually spin a web from some fork in the tree to the outer limbs, up and down which they travel.

BEARS are one of the healthiest, most nutritious, and certainly the cheapest articles of food. Plant plenty for winter use, in addition to the usual summer beans. They like good soil, though poor soil is generally palmed off upon them.

Don't be afraid to raise cabbages for the cows. Plant in rows three feet apart and fifteen inches in the row. Six or seven thousand can be grown on an acre. They can be planted any time before the 15th of July.

Mulch your small fruits enough to keep down weeds and grass. This will save cul-ture and double the crop, by keeping the ground moist. Leaves are excellent, but any litter is good.

Push earnestly against the weeds in your fields and the worms in your fruit trees. The latter promise you a hard battle this season. Diluted lye is death to them. Evergreens may be safely moved during all this month, but care must be taken not to expose their roots to the sun and

WHEN the millenium of farming is reached, white clover will be valued equally with red clover.

APPLES and peaches will, from present prospects, be very plenty in Illinois. WHEAT everywhere improves in Ohio as the Summer advances.

RAILROAD COMPANY

OFFER A LIMITED AMOUNT OF THEIR FIRST MORTGAGE BONDS

AT PAR, PRINCIPAL AND INTEREST

PAYABLE IN GOLD. The Great Pacific Railroad Line, extending 1781 miles from Omaha, on the Missouri River, to the tide-waters of the Pacific Ocean, is being built by two powerful Companies-THE UNION PACIFIC beginning at Omaha, building west, and the Central Pacific of California, beginning at Sacramento, building east, until the two roads shall meet. Both Companies have prosecuted the work with groat vigor, the Union Pacific having already ex-

THIRTY MILLION DOLLARS, And the Central over TWENTY MILLIONS, upon their respective parts of the undertaking. THE UNION PACIFIC HAVE COMPLETED 550 MILES have fron and other materials for two hundred miles more upon the ground, and one hundred

additional miles are ready for the track. They will have a much larger force employed this year than ever before, and it is expected that between

800 AND 900 MILES will be in operation during 1868. There seems to be no reasonable doubt that the distance Omaha and Sacramento will be traversed by rail

THE GOVERNMENT GRANTS 12,800 acres o land, and its Bonds to the average amount of \$38,000 per mile, to aid in the construction of the line, and authorizes the issue of the First Mortgage Bonds now offered for sale, to the same amount and to more. The Government takes a SECOND lien. and gives to the First Mortgage Bondholder a prior lien for their security, to which a large paid-up cap-ital is added. The Bonds cannot be issued except as each section of twenty miles is accepted by Government commission, so that they always represent a real property.

It is universally admitted that on the completion of the Union Pacific Railroad, its through business will make it one of the most profitable in the world -but its way or local business is already several times the interest on its bonds; so that, if not another mile were built, they would be a secure in-

THE NET-EARNINGS for eight months of last year on an average of 386 miles are officially re-ported at \$1.089, 138, while the interest on all the Bonds it, could issue on that length of road, for that time, reduced to currency, was only \$345,856. The amount paid by the Government for the transportation of troops, munitions, stores and mails has been, and doubtless will continue to be, much more than the interest on the United States Second Mort gage Bonds. If it is not, the charter provides that after the road is completed, and until said bonds and interest are paid, at least five per cent. of the net earnings of the road shall be applied to such pay-

The Union Pacific Bonds are for \$1,000 each, and have coupons attached. They have thirty years to-run, and bear annual interest, payable on the first days of January and July, at the Company's Office in the City of New York, at the rate of six per cent. in gold. The Principal is payable in gold at matu-rity. At the present rate of gold, these bonds pay in annual income on their cost of

NEARLY NINE PER CENT.. AND IT IS BELIEVED THAT THEY WILL SOON BE AT A PREMIUM.

The Company have but a very limited supply of their Bonds remaining on hand, but any subscriptions accepted to a greater amount than can be filled from Bonds now in the Company's possession, will be supplied from the New Bonds to be issued on tha ortion of the road completed in the Spring, in the

rder in which they are received. The Company reserve the right to advance the price of their bonds to a rate above par at any time, and will not fill any orders or receive any subscripions on which the money has not been actually paid at the Company's office before the time of such

Parties subscribing will remit the par value of the bonds and the accrued interest in currency at the rate of six per cent. per annum, from the date on which the last coupon was paid. Subscriptions will be received in Pittsburgh be e received in Pittsburgh by
